Performance of Ryegrass Varieties in Alabama, 2014 - 2015

K. M. Glass, C. D. Monks, and J. Brasher¹

¹Agric. Program Assoc.; Prof. & Crops Agronomist; Res. & Ext. Assoc., resp. Auburn University, AL 36849

The Alabama Experiment Station system evaluates variety performance of several crop species each year. Ryegrass studies were conducted during the 2014 - 2015 season at four locations across the state representing the northeast, central, southeast, and southwestern regions. The entries evaluated are chosen by private company, university, and federal staff. It is the mission of the experiment station to evaluate and present the data in a fair, unbiased manner that can be used by all sectors of industry and education.

* Experimental varieties

Methods

Ryegrass entries were seeded at 20 lb/acre in 7-inch rows (Table 1). Plots were 5 x 20 ft with four replications of each entry arranged in a randomized complete block experimental design. The 2014 – 2015 trials were conducted at the Gulf Coast Research and Extension Center, Fairhope; E.V. Smith Research Center, Plant Breeding Unit, Tallahassee; Sand Mountain Research and Extension Center, Crossville; and the Wiregrass Research and Extension Center, Headland.

Soil fertility was maintained at each location according to Auburn University soil test recommendations. At planting, nitrogen was applied at 50 lb/acre, with an additional 50 lb/acre N applied after each cutting. When the ryegrass reached a height of 6 to 10 inches, a flail harvester was used to cut the plants to 1 to 2 inches. According to the location, a section 32- or 49-in wide X 20 ft long from each plot was harvested. Dry matter yield was determined by drying subsamples from each variety and then calculated using fresh and dry weights.

Table 1. Planting dates and soil textures for Alabama ryegrass trial locations.

Location	Alabama Exp. Station & soil texture	Trial Years		
		2012-2013	2013-2014	2014-2015
		(planting date)		
Crossville	Sand Mountain Research & Ext. Center Hartselle fine sandy loam	25-Sep-12	13-Oct-13	25-Sep-14
Fairhope	Gulf Coast Research & Ext. Center Malbis fine sandy loam	24-Oct-12	11-Oct-13	23-Sep-14
Headland	Wiregrass Research & Ext. Center Dothan fine sandy loam	22-Oct-12	16-Oct-13	25-Sep-14
Tallahassee	Plant Breeding Unit, E.V. Smith Res. Ctr. Cahaba fine sandy loam	24-Oct-12	11-Oct-13	17-Sep-14

Performance of Annual Ryegrass Varieties in Alabama, 2015

Some varieties tested are considered experimental and are not currently available for retail sale. Inclusion in these trials is not a guarantee of performance or yield; rather, our data shows how the varieties performed at a specific location under specific environmental conditions.

Acknowledgements

We would like to express our appreciation for the work and dedication of the supervisory and staff personnel of the Alabama Experiment Station outlying units without whom this work would not be possible. Thanks are also expressed to the producers and citizens of Alabama for supporting research on the production of food and fiber across our state.

Outlying Units Involved

Sand Mountain Res. & Ext. Center, Crossville

William Clements, Director

E.V. Smith Res. Ctr, Plant Breeding Unit, Talladega

Greg Pate, Director

Gulf Coast Research & Ext. Center, Fairhope

Malcomb Pegues, Director

Jarrod Jones, Assoc. Director

Wiregrass Research and Ext. Center, Headland

Larry Wells, Director

Brian Gamble, Assoc. Director
