PERFORMANCE OF SOYBEAN VARIETIES IN ALABAMA, 1993

K.M. Glass and D.I. Bransby¹

INTRODUCTION

Soybean variety tests are conducted annually by the Alabama Agricultural Experiment Station. The 7 locations used represent the major soil and climatic regions of Alabama. These locations are divided into logical soybean growing regions. The regions and locations are:

<u>Region</u>	<u>Location</u>
Northern	Belle Mina, Crossville
Central	Prattville
Southern	Brewton, Monroeville
Black Belt	Marion Junction (2 soils)
Gulf Coast	Fairhope

EXPERIMENTAL PROCEDURES

The standard tests were designed as a randomized complete block with four replications. Plot size was four 24- to 36-inch rows 20 feet long. Sixteen feet of the middle two rows were harvested for yield. Seeding rate was 10 viable seeds per foot of row. The early date test was arranged in incomplete lattice square design with four replications.

Data were collected on seed yield, moisture, lodging, shattering, plant height, and maturity date. Plot yields were adjusted to 13 percent moisture and converted to bushels (60 pounds) per acre. Lodging was scored on a scale of 1 to 5 as follows:

- 1 - almost all plants erect.

¹Research Assistant and Professor of Agronomy and Soils.

2 - either all plants leaning slightly (less than 45°) or a few plants down.

3 - either all plants leaning moderately (approximately 45°) or 25 to 50 percent of the plants down.

4 - either all plants leaning more than 45° or 50 to 80 percent of the plants down.

5 - more than 80 percent of the plants down.

Shattering was rated on a scale of 1 to 5 based on performance of the border row 14 days after maturity. A rating of 1 indicates no shattering, a rating of 3 indicates a 4 to 8 percent shattering, and a rating of 5 is 20 percent or more shattering. Plant height was determined by measuring from the ground to the top of the plant at maturity. Maturity date was the day 95 percent of the pods reached mature pod color. Harvest was approximately 7 to 10 days later.

SEASONAL CONDITIONS

Rainfall (Table 3) in April and May 1993 was such that planting dates for the standard tests in northern Alabama and Marion Junction in central Alabama were delayed. All other standard tests were planted for optimum growth. The normal planting dates for full season plantings in the regular tests are the first week in May, May 15-25, and May 25 to June 5 for northern, central, and southern Alabama locations, respectively.

COMPARING VARIETIES

To aid in determining real yield differences, a statistical analysis of variance is performed on the data from each location. The L.S.D. (least significant difference) and C.V. (coefficient of variation) are given for each location's 1993 test, and for the location's or region's 2- and 3-year averages. The difference in yield of two varieties must exceed the L.S.D.

value for one variety to be considered superior to the others in yield in that particular test. The C.V. is a measure of the variability in an experiment. An increase in its value indicates an increase in the unexplained variability.

Since the performance of varieties varies with location and year, long-term averages from several locations are more reliable than 1-year performance. Three-year regional averages are considered a reliable evaluation of the relative performance of varieties.

ACKNOWLEDGMENTS

Appreciation is expressed to the following station superintendents and their staffs. It is their quality work which makes this report a reliable source of information for farmers in their areas.

Black Belt Substation, Marion Junction J.L. Holliman
J.R. Harris

Brewton Experiment Field, Brewton J.R. Akridge

Monroeville Experiment Field, Monroeville..... J.R. Akridge

Gulf Coast Substation, Fairhope E.L. Carden
N.R. McDaniel
M.D. Pegues

Prattville Experiment Field, Prattville D.P. Moore

Sand Mountain Substation, Crossville J.T. Eason
M.E. Ruf

Tennessee Valley Substation, Belle Mina W.B. Webster
Ellis Burgess
B.E. Norris

Appreciation is also expressed to Mien-Huei Tzeng, Research Data Analysis, for the computation and analysis of the data in this report.
