PERFORMANCE OF SOYBEAN VARIETIES IN ALABAMA, 1989

D.L. Thurlow and W.C. Johnson¹

INTRODUCTION

Soybean variety tests are conducted annually by the Alabama Agricultural Experiment Station. The 10 locations used represent the major soil and climatic regions of Alabama. These locations are divided into logical soybean growing regions. The regions and locations are:

| <u>Region</u> | <u>Location</u> |
|----------------|--------------------------------|
| Northern | Belle Mina, Crossville |
| Central | Camden, Prattville |
| Southern | Brewton, Headland, Monroeville |
| Black Belt | Marion Junction (2 soils) |
| Baldwin-Mobile | Fairhope |

A standard test is grown at each location. In addition, a late date-of-planting test is grown in each region, an early date-of-planting test is grown at Brewton, and preliminary tests are grown in the northern, central, and southern regions. The preliminary test contains advanced experimental lines and released varieties which are new to that particular region. These varieties will be placed in the standard test if their performance warrants.

¹ Respectively, Associate Professor and Professor of Agronomy and Soils.

EXPERIMENTAL PROCEDURES

The standard tests were designed as a randomized complete block with four replications. Plot size was four 30- to 36-inch rows 20 feet long. Sixteen feet of the middle two rows were harvested for yield. Seeding rate was 60 pounds per acre (10 viable seeds per foot of row). The preliminary tests were planted in a randomized complete block design with three replications. The early and late planting date tests were arranged in incomplete lattice square designs, with 16 and 9 entries per maturity group and four replications, respectively.

Two planting dates were used for the tests at Crossville, Prattville, Brewton, Marion Junction (Vaiden Soil), and Fairhope. An entry must perform well in the early standard test before it is entered in the late date test. Results are reported by planting date in the tables, with date 1 being the standard full season planting and date 2 the later planting at all locations. The Marion Junction (Vaiden soil) regular planting test in 1988 was not harvested because of poor stand due to lack of moisture during the planting period. The late date of planting tests were not planted at Marion Junction (Vaiden soil) and Fairhope locations in 1989 due to excessive rainfall in June and July.

Data were collected on seed yield, moisture, lodging, shattering, plant height, and maturity date. Plot yields were adjusted to 13 percent moisture and converted to bushels (60 pounds) per acre. Lodging was scored on a scale of 1 to 5 as follows:

- 1 - almost all plants erect.
- 2 - either all plants leaning slightly (less than 45°) or a few plants down.

- 3 - either all plants leaning moderately (approximately 45°) or 25 to 50 percent of the plants down.
- 4 - either all plants leaning more than 45° or 50 to 80 percent of the plants down.
- 5 - more than 80 percent of the plants down.

Shattering was rated on a scale of 1 to 5 based on performance of the border row 14 days after maturity. A rating of 1 indicates no shattering, a rating of 3 indicates 4 to 8 percent shattering, and a rating of 5 is 20 percent or more shattering. Plant height was determined by measuring from the ground to the top of the plant at maturity. Maturity date was the day 95 percent of the pods were their mature pod color. Harvest was approximately 7 to 10 days later.

Severe stunting and chlorosis were observed in the varieties planted on the alkaline Sumter soil at the Black Belt Substation. A chlorosis rating was made in early August 1987, September 1988, and August 1989 with a rating of 1 to 10, where 1 was no noticeable change in green color from a normal soybean plant and 10 was plants losing leaves due to necrotic spots in leaves. The yields from areas that showed iron chlorosis are recorded for 1989, along with the 1988-89 averages, table 18.

SEASONAL CONDITIONS

Rainfall (table 3) in April and May 1989 was such that all but one standard tests were planted for optimum growth. The only exception was Camden, planted June 13, approximately 3 weeks late. The late planting tests at Marion Junction and Fairhope were not planted due to heavy rainfall in June and July at both locations. The normal planting dates for full season plantings in the regular tests are the first week in May, May 15-25, and May 25 to June 5 for north, central, and southern Alabama locations, respectively.

The higher than normal rainfall in June and July resulted in some severe disease problems at some locations, tables 19, 20, and 21. Some of the central and southern areas were short on moisture in late August and early September, resulting in low yields for almost all entries at Prattville, Marion Junction (Sumter), Camden, Monroeville, and Headland.

COMPARING VARIETIES

To aid in determining real yield differences, a statistical analysis of variance is performed on the data from each location. The L.S.D. (least significant difference) and C.V. (coefficient of variation) are given for each location's 1989 test, and for the location's or region's 2- and 3-year averages. The difference in yield of two varieties must exceed the L.S.D. value for one variety to be considered superior to the others in yield in that particular test. The C.V. is a measure of the variability in an experiment. An increase in its value indicates an increase in the unexplained variability.

Since the performance of varieties varies with location and year, long-term averages from several locations are more reliable than 1-year performance. Three-year regional averages are considered a reliable evaluation of the relative performance of varieties.

A committee comprised of Department of Agronomy and Soils personnel involved in soybean extension and research reviewed the past 3 years of soybean variety test data to assemble the list of recommended varieties on page 46. The acceptable varieties are not all equal in performance. Some are outstanding in one or more characteristics; while others may not be obviously outstanding, they might possess a satisfactory combination of all characteristics.

ACKNOWLEDGMENTS

Appreciation is expressed to the following station superintendents and their staffs. It is their quality work which makes this report a reliable source of information for farmers in their areas.

Black Belt Substation
Marion Junction

J.L. Holliman
M.D. Pegues

Brewton and Monroeville
Experiment Fields
Brewton and Monroeville

J.R. Akridge

^{1/} Chlorosis ratings were 1-10, with 1 being no chlorosis and 10 being plants that were losing leaves due to necrotic spots in leaves.

REACTION OF SOYBEAN VARIETIES TO FROGEYE LEAFSPOT^{1/}

Soybean varieties were rated in 1989 for their reaction to frogeye leafspot, stem canker, and sudden death syndrome (SDS) in three geographical areas of the State. Only varietal reactions to frogeye are listed, tables 19, 20, and 21, since stem canker and SDS occurrence were sporadic.

Four replications of each variety were rated for frogeye leafspot at the Black Belt and Gulf Coast substations and three replications on the Sand Mountain Substation. Frogeye severity was measured using a rating system of 1-10, with 1 being free of frogeye and 10 having more than 90 percent of the leaf area covered with frogeye spots.

Varietal reaction to frogeye leafspot varied between locations due to the possible differences in fungal strains that incite frogeye and environmental conditions.

^{1/}Disease ratings were made by William S. Gazaway and John B. Henderson, Extension Plant Pathologist and Extension Agronomist, respectively.

RECOMMENDED SOYBEAN VARIETIES FOR 1990

This list of recommended varieties was prepared by the authors of this report, D. B. Weaver, Assistant Professor of Agronomy and Soils, and J. B. Henderson, Agronomist-Soybeans, Alabama Cooperative Extension Service, based on variety test performance for at least 3 years.

Northern Alabama

| <u>Early</u> | <u>Full season</u> | <u>Late</u> (late plantings) |
|-----------------|--------------------|---------------------------------|
| *Bay | Bryan | *Braxton |
| *Bedford | Centennial | Hartz H 7126 |
| *Coker 425 | Coker RA 606 | **Pioneer 9791 |
| Coker 485 | Coker 686 | **Pansom |
| Deltapine 105 | *Hartz H 6130 | **Stonewall |
| Deltapine 415 | Hartz H 6686 | |
| *Essex | Hartz H 6200 | |
| FFR 561 | *Leflore | |
| FFR 565 | New NK S69-54 | |
| Forrest | Pioneer 9691 | |
| Hartz H 5164 | Sharkey | |
| Hartz H 5171 | *Tracy M | |
| Hartz H 5370 | | |
| Hutcheson | | |
| Pioneer 9581 | | |
| Pioneer 9591 | | |
| **Riverside 577 | | |
| Terra-Vig 515 | | |
| Terra-Vig 553 | | |

Central Alabama

| <u>Very early</u> | <u>Early</u> | <u>Full season</u> | <u>Late</u> |
|-------------------|---------------|--------------------|-------------|
| Coker 485 | Coker RA 606 | *Braxton | Cobb |
| Deltapine 105 | Coker RA 680 | Coker 6727 | Coker 368 |
| Forrest | *Davis | FFR 771 | Coker 6738 |
| Hartz H 5370 | FFR 668 | *GaSoy 17 | Dowling |
| Terra-Vig 515 | Leflore | Hartz H 7126 | Foster |
| | Pioneer 9691 | Terra-Vig 708 | Johnston |
| | Riverside 696 | Terra-Vig 717 | |
| | *Tracy M | Wright | |
| | *Young | | |

(Continued on following page)

Black Belt (acid soil)

| <u>Very early</u> | <u>Early</u> | <u>Full season</u> | <u>Late</u> |
|-------------------|---------------|--------------------|--------------|
| *Bay | Centennial | Braxton | *Cobb |
| Coker 485 | Coker 686 | **Coker 6847 | Coker 368 |
| Deltapine 105 | *Coker RA 680 | *Deltapine 417 | Coker 6738 |
| FFR 562 | Davis | Hartz H 7110 | Dowling |
| Hartz H 5370 | Deltapine 566 | Hartz H 7126 | Hartz H 8112 |
| Wilstar 550 | Hartz H 6130 | Pioneer 9791 | Johnston |
| | Leflore | Ransom | |
| | Tracy M | Stonewall | |
| | Young | | |

Southern Alabama

| <u>Very early</u> (early May plantings) | <u>Early</u> | <u>Full season</u> | <u>Late</u> |
|--|---------------|--------------------|-------------|
| Deltapine 105 | Coker RA 606 | Braxton | Cobb |
| Hartz H 5164 | Coker RA 680 | Coker 6727 | Coker 368 |
| Pioneer 9591 | Davis | Coker 6847 | *Coker 6738 |
| | **FFR 668 | FFR 771 | Dowling |
| | Leflore | GaSoy 17 | Johnston |
