# PERFORMANCE OF SOYBEAN VARIETIES IN ALABAMA, 2004

K. M. Glass, D.P. Delaney, and Edzard van Santen

Agricultural Program Associate, Extension Sobeanc Specialist, and Professor

## INTRODUCTION

Soybean variety tests are conducted annually by the Alabama Agricultural Experiment Station. The 7 locations used represent the major soil and climatic regions of Alabama. These locations are divided into logical soybean growing regions. The regions and locations are:

<u>Region</u>	<u>Location</u>
Northern	Belle Mina, Crossville
Central	Prattville, Shorter
Southern	Brewton
Black Belt	Marion Junction (2 soils)
Gulf Coast	Fairhope

## EXPERIMENTAL PROCEDURES

The standard tests were conducted as a randomized complete block design with four replications. Standard plot size was four 30- to 38-inch rows by 20 feet long. Fifteen feet of the middle two rows were harvested for yield. Seeding rate was 10 viable seeds per foot of row. The Group IV test was drilled with seven 7-inch rows. Seeding rate was five viable seeds per foot of row. The Early Planted test at Brewton was arranged in an incomplete lattice square design with four replications.

Data were collected on seed yield, moisture, lodging, shattering, plant height, and maturity date. Plot yields were adjusted to 13 percent moisture and converted to bushels (60 pounds) per acre. Lodging was scored on a scale of 1 to 5 as follows:

- 1 - almost all plants erect.
- 2 - either all plants leaning slightly (less than 45%) or a few plants down.
- 3 - either all plants leaning moderately (approximately 45%) or 25 to 50 percent of the plants down.
- 4 - either all plants leaning more than 45% or 50 to 80 percent of the plants down.
- 5 - more than 80 percent of the plants down.

Shattering was rated on a scale of 1 to 5 based on performance of the border rows 14 days after maturity. A rating of 1 indicates no shattering, a rating of 3 indicates a 4 to 8 percent shattering, and a rating of 5 is 20 percent or more shattering. Plant height was determined by measuring from the ground to the top of the plant at maturity. Maturity date was the day 95 percent of the pods achieved mature pod color. Harvest was approximately 7 to 10 days later.

## **SEASONAL CONDITIONS**

Rainfall for 2004 is shown in Table 17. The normal planting dates for the standard tests are the first week in May, May 15-25, and May 25 to June 5 for northern, central, and southern Alabama locations, respectively. The Vaiden Soil test at Marion Junction was not harvested due to weak stand then excessive moisture during the growing season. The Early and Regular tests at Brewton were destroyed by hurricane Ivan.

## **COMPARING VARIETIES**

To aid in determining real yield differences, a statistical analysis of variance was performed on the data from each location. The L.S.D. (least significant difference) and C.V. (coefficient of variation) are reported for each location's 2003 test, and for the location's or region's 2- and 3-year averages. The difference in yield of two varieties must exceed the L.S.D. value for one variety to be considered superior to others in yield in that particular test. The C.V. is a measure of the variability in an experiment. An increase in its value indicates an increase in the unexplained variability.

Since the performance of varieties varies with location and year, long-term averages from several locations are more reliable than 1-year performance. Three-year regional averages are considered a reliable evaluation of the relative performance of varieties. However varietal rankings may change among years and among locations. This change in rankings is measured by the significance of variety x location, variety x year, variety x location\*year interaction. These interactions were significant in all cases. Thus, care should be exercised when extrapolating results from one location or year to another.

## **ACKNOWLEDGMENTS**

Appreciation is expressed to the following station superintendents and their staffs. It is their quality work which makes this report a reliable source of information for farmers in their regions. Chet Norris and Ellis Burgess, Tennessee Valley Research and Extension Center; Tony Dawkins, Sand Mountain Research and Extension Center; Don Moore, Prattville Agricultural Research Unit; Bobby Durbin, E.V. Smith Research Center, Field Crops Research Unit; Jimmy Holliman, Black Belt Research and Extension Center; Randy Akridge, Brewton Agricultural Research Unit; Ronnie McDaniel and Malcomb Pegues, Gulf Coast Research and Extension Center.

**TABLE 15. CULTURAL PRACTICES FOR SOYBEAN VARIETY TESTS IN 2004**

Location	Type of test	Date planted	Row width	Herbicide used	Fertilizer applied
<i>- inches -</i>					
Belle Mina	Group IV	April 28	7	Treflan	none recommended
	Standard	May 19	30	Treflan	none recommended
Crossville	Standard	May 17	30	Dual	none recommended
Prattville	Standard	May 21	30	Prowl	none recommended
Shorter	Standard	May 26	30	Dual	none recommended
Marion Junction	Standard (Sumter)	June 17	36	Scepter	none recommended
	Standard (Vaiden)	June 17 <sup>†</sup>	36	Scepter	Not harvested
Brewton	Early	trial lost due to hurricane Ivan			
	Standard	trial lost due to hurricane Ivan			
Fairhope	Standard	June 17	38	none soil applied	185 lb. 0-21-21/acre

† This trial was lost due to excess moisture. Not replanted - too late in season.

**TABLE 16. SOIL TYPES FOR SOYBEAN TESTS, 2004**

Location	Soil Type
Belle Mina	Emory silt loam
Crossville	Wynnvile fine sandy loam
Prattville	Lucedale fine sandy loam
Shorter	Cowarts loamy sand
Marion Junction	Vaiden clay
Marion Junction	Sumter clay (high pH soil)
Brewton	Benndale fine sandy loam
Fairhope	Malbis fine sandy loam

TABLE 17. RAINFALL AT TEST LOCATIONS DURING GROWING SEASON, 2004

**TABLE 18. ENTRIES AND SOURCES OF SEED FOR SOYBEAN TESTS, 2004**

<b>Source</b>	<b>Entry</b>
Alabama Crop Imp. Assoc. Auburn, Alabama	Hutcheson, Stonewall, Kuell,
Croplan Genetics Midland City, Alabama	Croplan Genetics brand varieties
Delta and Pine Land Company Scott, Mississippi	Deltapine brand varieties
Department of Agronomy & Soils Auburn University, Alabama	Au AX 416
Delta King Seed Co. McCrory, Arkansas	Delta King brand varieties
Eagle Seed Co. Weiner, Arkansas	ES brand varieties
Garst Seed Co. Cordova, Tennessee	Garst brand varieties
Monsanto Dekalb, Illinois	Asgrow, Dekalb, and Hartz brand varieties
Pioneer, A DuPont Company Huntsville, Alabama	Pioneer brand varieties
Progeny Ag Products Wynne, Arkansas	Progeny brand varieties
South Carolina Foundation Seed Association Clemson, South Carolina	Musen
Southern States Coop. Richmond, Virginia	SS RT brand varieties
UniSouth Genetics, Inc. Nashville, Tennessee	USG brand varieties
United Agri-Products Madison, Alabama	Dyna-Gro brand varieties
University of Arkansas Fayetteville, Arkansas	Desha, Lonoke, Ozark, R97-1634, R98-1817
University of Georgia Athens, Georgia	G03-G1126, G03-G113169
University of Missouri Columbia, Missouri	Anand
