The Commissioner Speaks

As Commissioner of the Alabama Department of Agriculture and Industries, I am pleased to present the 1977 edition of "Alabama Agricultural Statistics." This bulletin comes to you through the combined efforts of this department and Statistical Reporting Service of the USDA. It is a comprehensive summary of current data with historical comparisons relating to the agricultural sector of Alabama's economy. Reliable basic data is essential to the efficient management of business. Farmers are no exception. They and others in agri-business need current and accurate information if they are to plan their production and marketing programs wisely.

We in the department are especially proud of the part we have had in the orderly and healthy development of agriculture in Alabama over the years. We believe that there is still potential for expansion. This is important because the challenge of the future appears to be whether or not our nation can continue to be the breadbasket of the world as well as supplying our own needs.

This publication typifies the cooperative efforts between the Alabama Department of Agriculture and Industries and the United States Department of Agriculture. Through these cooperative efforts, we avoid duplication of effort while still providing assistance to Alabama's total agricultural community.

Sincerely,

A handwritten signature in dark ink that reads "McMillian Lane". The signature is written in a cursive style with a large, prominent "M" and "L".

McMillian Lane
Commissioner

ALABAMA CROP and LIVESTOCK REPORTING SERVICE

FOREWORD

This bulletin is the nineteenth in a series that dates back to 1948. Over the years, these publications have ranked among the most popular of our releases based on user demand. It is by far the most complete accumulation of current statistical data available relating to agriculture in Alabama. In general, this issue contains the preliminary series of estimates for 1976 along with the comparable 1975 data which has been subject to revision. Also included are pertinent historical estimates on the state level for comparison purposes.

The estimates presented in this bulletin are developed primarily from sample surveys. In recent years, we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old stand-by, the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also tied closely to the degree of response. In Alabama, the response to our surveys has been gratifying. For this reason, I want to acknowledge the many Alabama farmers and agri-businessmen who assisted us in preparing our reports by providing basic data about the state's agriculture. Their reports have been supplemented by those from the County Extension Chairman. The county income data in particular is the result of assistance given us by the Cooperative Extension Service.

I do want to express my appreciation to the staff of the Alabama Crop and Livestock Reporting Service for their devoted service--the results of which you will see here.

Sincerely,

PAUL A. WALSH

Statistician in Charge

CROP REVIEW

1976

by Charles A. VanLahr, Jr.

The value of principal crops produced by Alabama farmers during 1976 totaled \$681.3 million, up 20 percent from the 1975 value of \$566.9 million. Higher prices for soybeans, cotton and wheat combined with increased corn production were largely responsible for the increase. Wheat production was the second largest on record and the corn crop was the largest since 1958. Production increases were also recorded for cotton, Irish potatoes, tall fescue seed, snap beans, tomatoes, watermelons and peaches.

Soybeans remained Alabama's most valuable crop with a value of \$206.4 million, 32 percent above 1975. Other crops contributing substantial value were: corn for grain, \$125.8 million up 30 percent; cotton lint and seed, \$124.5 million up 35 percent; peanuts \$105.8 million, up 1 percent; hay \$45.3 million down 3 percent; and Irish potatoes, \$21.9 million, down 4 percent.

Alabama farmers harvested principal crops from 3.6 million acres, up 3 percent from the 3.5 million acres harvested in 1975. Largely responsible for the increase were more acres of corn and cotton. Other crops with increased acreage harvested included hay and peanuts.

Rain and wet grounds delayed land preparation and planting of row crops during the early spring. Favorable conditions during April and May allowed most farmers to make up lost time and planting of corn, cotton and peanuts was completed ahead of the normal completion date. Rains during June delayed soybean planting. Grass, weeds and insects in row crops caused some concern during July as wet fields limited fieldwork.

Cotton and soybean crops made fair growth during the summer months but were developing at a much slower pace than normal. Corn and peanuts made good growth during the same period. Harvest of the corn crop began in August and made excellent progress. Cotton bolls opened slowly and harvest was delayed in many counties. As the year ended most crops had been harvested and farmers were busy making plans for the next year's crops.

Five leading crops: Acreage, yield, production and value, 1976

Crop	Unit	Acres harvested	Yield per harvested acre	Production	Value of production

LIVESTOCK REVIEW

1976

by Johathan L. Bauer

Record High Cash Receipts: Alabama livestock producers received a record \$408.6 million from marketings of cattle and calves, hogs and pigs, and sheep and lambs during 1976, 62 percent above the \$251.5 million received for 1975 marketings and 18 percent above the previous record of \$345.6 million received in 1973. Record high marketings of cattle and calves caused the majority of the increase. The total value of cattle, hogs, and sheep in Alabama's end-of-year inventory, at \$388.2 million, was 7 percent below the previous year's \$416.6 million and 38 percent below the record \$624.6 million value at the end of 1973. Value of cattle dropped only one percent, but the value of hogs dropped 43 percent.

Cattle Numbers Down 17 Percent: Alabama cattlemen held 2,360,000 cattle and calves on January 1, 1977, 17 percent below the number on hand a year earlier and 13 percent below the inventory of January 1, 1975. Brood cow numbers were down considerably, from 1,400,000 a year earlier to 1,180,000 on January 1, 1977, a decrease of 16 percent. Heifers for brood cow replacement decreased 9 percent. The largest decrease occurred in calves less than 500 pounds. The value of cattle and calves on Alabama farms on January 1, 1977, totaled \$354.0 million, an average of \$150 per head. Alabama ranked 19th among states in total cattle and 14th in beef cows. The 1976 Alabama calf crop, at 1,050,000, was 200,000 head below the 1975 record calf crop and 90,000 head below the calf crop of 1974.

Hog Inventory Down 9 Percent: There were 750,000 hogs and pigs on Alabama farms on December 1, 1976, 9 percent less than a year earlier. Alabama ranked 16th among states in total hog numbers. Breeding stock was down 11 percent and market hogs were down 8 percent. The total value of the December 1976 inventory, at \$34.1 million, was 43 percent below the previous year's total. The large decrease resulted primarily from the value per head dropping \$28 from 1975 to 1976.

Farrowings during 1976 totaled 154,000, down 1 percent from the 156,000 farrowings during 1975. The average litter size increased to 7.5, giving a pig crop of 1,155,000 for 1976, about the same as the 1,154,000 pigs saved in 1975.

Sheep Inventory Continues Decline: There were 3,600 sheep on Alabama farms January 1, 1977, 200 below the 3,800 on hand January 1, 1976. Inventory was valued at \$86,000, the same as a year earlier.

Milk Production Down: A total of 682 million pounds of milk was produced on Alabama farms during 1976, down 1 percent from 1975. The average number of milk cows on farms was 88,000 head, 3,000 less than in 1975. Production per cow rose from 7,538 pounds in 1975 to 7,750 pounds in 1976.

Red Meat Production Up: Production of red meat (beef, veal, pork, and mutton) in Alabama totaled 215.4 million pounds during 1976, down 10 percent from the 238.4 million pounds produced in 1975. Beef and veal showed a decline of 8 percent while hog production was down 13 percent.

Milk: Production, disposition and income, Alabama, 1974-76

Item	Unit	1974	1975	1976
<u>Production 1/</u>				
Milk cows on farms 2/	1,000 head	95	91	88
Milk per cow	Pounds	7,453	7,538	7,750
Milkfat per cow	Pounds	277	277	284
Percentage milkfat in milk produced	Percent	3.71	3.68	3.66
Total milk production	Mil. lbs.	708	686	682
Total milkfat production	Mil. lbs.	26	25	25
<u>Farm Disposition</u>				
Consumed on farms where produced				
Fed to calves 1/	Mil. lbs.	7	6	6
As fluid milk, cream and butter	Mil. lbs.	26	26	26
Total	Mil. lbs.	33	32	32
Milk marketed by farmers				
Sold to plants and dealers as whole milk	Mil. lbs.	655	635	630
Retailed by farmers as milk and cream	Mil. lbs.	20	19	20
Total	Mil. lbs.	675	654	650
<u>Utilization and Income</u>				
Milk sold to plants and dealers				
Quantity	Mil. lbs.	655	635	630
Price per 100 lb.	Dollars	10.00	10.40	10.80
Cash receipts	1,000 dols.	65,500	66,040	68,040
Milk retailed by farmers				
Quantity	1,000 qts.	9,302	8,837	9,302
Price per quart	Cents	35.0	40.0	45.0
Cash receipts	1,000 dols.	3,256	3,535	4,186
Combined marketings of milk and cream				
Milk utilized	Mil. lbs.	675	654	650
Average returns per 100 pounds of milk 3/	Dollars	10.19	10.64	11.11
Average returns per pound milkfat 3/	Dollars	2.75	2.89	3.04
Cash receipts from marketings	1,000 dols.	68,756	69,575	72,226
Used for milk, cream and butter on farms where produced				
Milk utilized	Mil. lbs.	26	26	26
Value	1,000 dols.	2,649	2,766	2,889
Gross farm income from dairy products 4/	1,000 dols.	71,405	72,341	75,115
Farm value of milk produced 5/	1,000 dols.	72,145	72,990	75,770

1/ Excludes milk sucked by calves. 2/ Average number on farms during year, excluding heifers not yet fresh. 3/ Cash receipts divided by milk or milkfat represented in combined marketings. 4/ Cash receipts from marketing of milk and cream plus value of milk used for home consumption. 5/ Includes value of milk fed to calves.

Manufactured dairy products: Production of selected items, by months, 1975-76

POULTRY REVIEW

1976

by Elizabeth H. Harwell

Poultry Again Leads Alabama's Agriculture Industry: As in the past recent years, the State's poultry industry, leading all other commodities, accounted for 31 percent of the cash receipts from farm marketings by producers in 1976. At \$513 million, these total sales of broilers, eggs, and chickens were 1 percent above the previous year with \$507 million. Broiler production consisted of 69 percent of this amount while egg production followed with 29 percent. Production of chickens, excluding broilers, had only minor significance. A small percentage of the commercial table egg production is from independently owned flocks while the majority of the production is controlled by large integrated operations. The broiler industry is totally regulated by these integrated firms. Ranked with other states in total cash receipts, Alabama moved up to fourth place behind Georgia, Arkansas, and California, respectively, after remaining in fifth place for a number of years.

Broiler Production Climbed As Prices Fell: Alabama broiler producers marketed 430.2 million birds in 1976, up 9 percent from the 395.8 million marketed in 1975 and up 8 percent from 1974 with 398.3 million. Although production exceeded the previous year, 1976 cash receipts from broilers at \$355 million was \$16 million less than 1975's \$371 million. The difference was a result of a 3 cent decrease in the price per pound (liveweight at farm) from the record high price of 25.3 cents in 1975 to the 22.3 cents in 1976. The lowest price on record was in 1967 when growers received an average of 12.0 cents.

Egg Production Decreased: Alabama's laying flocks produced 2,904 million eggs in 1976, which was 32 million less than the 2,936 million eggs of the previous year. These eggs were either used for hatching eggs or sold on the commercial market, both wholesale and retail. The average number of layers on hand during the year was 12.3 million birds compared with 12.5 million in 1975 and 12.9 million in 1974. During the year the average Alabama layer produced 238 eggs. Egg production accounted for \$150.3 million of the poultry cash receipts.

Baby Chick Production Up 8 Percent: Commercial hatcheries were the scene of 464,956,000 chicks hatching during the year, 8 percent above the 432,399,000 chicks in 1975. This total hatch set a new record over the previous high of 462.7 million in 1972. Broiler-type chicks comprised 97 percent of the hatch while the remaining 3 percent consisted of egg-type chicks.

Chicken Production (Excluding Broilers) Increased: Alabama poultrymen produced 13.7 million chickens (excluding broilers) in 1976, up 10 percent from 1975 with 12.4 million. This phase of the poultry industry reflects largely the production of replacement pullets for laying flocks and production in small farm flocks. Cash receipts from sales of chickens were \$7.5 million, \$2.5 million greater than the year before.

PRICES AND FARM LABOR REVIEW

1976

by Harry L. Wimbush

Prices Received by Farmers

The Alabama All Commodity Index of Prices Received averaged 441 percent of the 1910-14 =100 base in 1976, compared with the 419 percent in 1975. This was 5 percent above 1975 and up 7 percent from the 414 percent in 1974. Higher prices for crops contributed most to the increase.

The Livestock and Livestock Products Index, one of the two components of the All Commodity Index, at 405 percent of base, was up 1 percent from the 1975 average. Beef cattle averaged \$23.60 per cwt., up \$6.40 from the \$22.20 in 1975. The average price for calves was \$29.20 per cwt., \$7.40 more than 1975.

Hogs, at \$43.80 per cwt., were down 80 cents from 1975. Milk sold wholesale by farmers averaged \$10.80 per cwt. in 1976, up 40 cents from the previous year. Broiler prices, at 22.3 cents per pound, were 3 cents per pound less than 1975. Eggs, at 62.1 cents per dozen, were 8.3 cents above 1975.

The Crops Index, the other component of the All Commodity Index, was 518 percent of base in 1976, up 59 points (13 percent) from the 1975 average. Potatoes averaged \$7.87 per cwt. in 1976, compared with \$8.34 the year before, and \$8.38 in 1974. Cotton averaged 66.4 cents per pound, 12.9 cents above the previous year's average of 53.5. Soybeans, at \$7.05 per bushel, increased more than 50 percent from the \$4.65 in 1975. The peanut price increased 5 percent from the 19.6 cents per pound in 1975. Hay, at \$41.00, was down 50 cents from a year earlier. Wheat averaged \$3.20 per bushel, \$.25 more than 1975. The price of corn, at \$2.55 per bushel, dropped 20 cents from the previous year.

Prices Paid by Farmers

Alabama does not have an Index of Prices Paid by Farmers. Therefore, direct comparisons between prices paid and those received by Alabama farmers cannot be made. However, many of the cost of production items increased from a year ago.

Farmers in the state paid an average of \$172.00 per ton for chick starter in 1976, compared with \$157.00 in 1975 and \$176.00 in 1974. Broiler grower sold for \$163.00 per ton in 1976, compared with \$158.00 in 1975 and \$178.00 in 1974. Farmers paid \$155.00 per ton for laying feed, compared with \$147.00 in 1975 and \$163.00 in 1974. Soybean meal, 44 percent protein, sold for \$11.50 per cwt., up from the \$8.80 paid in 1975. Farmers paid an average of \$8.70 per cwt. for 14-18 percent hog feed, compared with \$7.90 in 1975 and \$9.10 in 1974.

Farm Employment and Wage Rates

Beginning in 1973, Alabama labor statistics were derived from a probability farm labor survey conducted during the weeks that included the twelfth of January, April, July, and October of each year. The data from this survey was supplied by individual farmers and employers of agricultural related firms who had farm laborers. During 1976, the annual average number of workers at 94,000, had increased over the previous year's average by 3 percent. This was the second year for an increase. Previously, the trend had been a steady decrease in both family workers and hired workers. Annual averages of wage rates have risen significantly each year with the greatest increases occurring in January, as a result of the increasing required minimum wage rate as set up in the amended Fair Labor Standards Act of 1938. The wage for farm workers for all methods of pay converted to an hourly rate averaged \$2.45 during 1976, an increase of 22 cents over the previous average of \$2.23, and 61 cents greater than the 1974 average of \$1.84.

1976 FARM INCOME REVIEW

1976

by David C. Bellis

Cash receipts from farm marketings in Alabama totaled a record \$1.6 billion in 1976, compared with \$1.4 billion in 1975 and \$1.2 billion in 1974. Livestock and livestock products, valued at \$993 million, accounted for 61.4 percent of the total, while crops totaled \$625 million to make up the remaining 38.6 percent. Farm income for all commodities was 19 percent above a year earlier, with livestock and livestock products up 18 percent and crops up 21 percent.

Alabama poultry and poultry products accounted for 31.3 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 19.2 percent of the total receipts. Soybeans accounted for 11.2 percent of the total while cotton lint and cottonseed moved up to fourth place with 7.9 percent of the total. Peanuts and hogs dropped from previous standings to 6.4 percent and 6.0 percent, respectively. Dairy products accounted for 4.5 percent of the total. Sales from these seven enterprises made up 86.6 percent of the cash receipts from farm marketings in Alabama.

Receipts from the state's broilers, eggs, and farm chickens totaled \$508.1 million in 1976, down \$7.8 million from the 1975 total of \$515.9 million. Cattle and calf returns totaled \$309.8 million, more than double the 1975 level. Cash receipts from marketings of corn, hay, sorghum grain, and soybeans set new record highs for Alabama in 1976. Receipts from cotton lint and cottonseed, soybeans, and peanuts accounted for 66 percent of the total crop receipts. Combined returns from these three crops were up 26 percent from 1975.

FARM INCOME CONCEPTS

Cash receipts from farm marketings represent gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, interfarm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed and marketed in another county.

Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. For field crops, such as corn, hay, cotton, and soybeans, where the crop is harvested during one calendar year and portions are sold the next calendar year, cash receipts are not to be compared with crop year value of sales. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops where all or nearly all the production is harvested and marketed within a single calendar year, such as peanuts, the cash receipts are essentially the same as the value of production.

The annual cash receipts from farm marketings of livestock and poultry also refer to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, where commodities, such as broilers, are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

Reports Issued by the Alabama Crop and Livestock Reporting Service

The Alabama Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers and various other special reports. Listed below are a few of the more important reports which may be obtained by writing to:

Agricultural Statistician
P. O. Box 1071
Montgomery, Alabama 36102

-
- () 100 General Crops and Crop Values - - Estimates of acreage, yield and production of major crops --monthly. Crop values--annually. Pecans and peaches--during season.
 - () 110 Weekly Crop and Weather - - Summary of crop conditions, weather etc.--weekly.
 - () 120 Cotton - - Acreage, yield and production by district--semi-annually.
 - () 130 Grain Stocks - - Estimates of stocks of grain in all positions--quarterly.
 - () 139 White Corn - - Acreage, yield and production--semi-annually.
 - () 199 Crop County Estimates - - Estimates by counties for corn, cotton, hay, peanuts, sorghum grain, soybeans and wheat.
 - () 301 Potatoes - - Acreage, yield and production--monthly during season.
 - () 330 Commercial Vegetables - - Acreage and production--periodically.
 - () 400 Cattle - - Cattle inventory and calf crop--semi-annually.
 - () 412 Sheep - - Sheep inventory, lamb crop and wool production--annually.
 - () 420 Hogs - - Hog inventory, pig crop, farrowings and farrowing intentions--semi-annually.
 - () 461 Bees and Honey - - Honey and beeswax production and prices--annually.
 - () 470 Commercial Slaughter - - Commercial production of red meat--monthly.
 - () 499 Livestock County Estimates - - Cattle and hog inventories--annually.
 - () 500 Dairy and Manufactured Dairy Products - - Milk cows and milk production--monthly. Estimates of manufactured dairy products--annually.
 - () 604 Weekly Broiler - - Eggs set and broilers placed--weekly.
 - () 654 Poultry Report - - Commercial hatchery production, pullets placed for broiler hatchery supply flocks, layer numbers and egg production--monthly. Chicken inventory, chickens raised and special commercial poultry survey--annually.
 - () 699 Poultry County Estimates - - Inventory--annually.
 - () 700 Prices - - Prices received by farmers, prices paid for feed, price indexes and ratios--monthly.
 - () 701 Farm Income - - Cash receipts from farming, farm expenses and value of products consumed on farms--semi-annually.
 - () 709 Farm Labor - - Number of workers and wage rates--quarterly.
 - () 799 Cash Receipts County Estimates - - Crop and livestock marketings--annual bulletin.
 - () 900 Alabama Agricultural Statistics - - annual bulletin.

WHY CROP AND LIVESTOCK REPORTS

- A man's judgment is no better than his facts and crop and livestock reports are the basic facts of agriculture.
- They aid farmers in planning their production and marketing and provide them with an orderly market.
- They are the basis for analysis of agriculture and other business conditions.
- They enable railroads to make better distribution of cars for moving farm products.
- They give producers the same foresight to future price trends that organized dealers possess.
- They are a check on fluctuation in price by removing uncertainty of supply.
- They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.
- They aid farm organizations, schools and others in planning constructive programs.
- They give information on surplus and deficit areas of production making possible a more economical distribution of products.
- They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.
- They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.
- They indicate potential buying power enabling manufacturers to meet the probable demand.
- They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, business men, transportation agencies, crop and livestock interests, and governmental agencies.
