ALBERT McDONALD
Commissioner of Agriculture

FOREWORD

The Alabama Agricultural Statistics Service, USDA, in cooperation with the Alabama Department of Agriculture and Industries, is pleased to present the thirty-second annual bulletin. This issue presents final estimates for 1984-1988 and preliminary estimates for 1989. Final estimates are presented after all data associated with each commodity is finalized. These published data have been carefully reviewed in connection with the 1987 Census of Agriculture.

The Alabama Agricultural Statistics Service develops estimates primarily from sample surveys. The accuracy of these estimates is linked closely to selected farmers' response. Therefore, this publication is the result of the continued cooperative assistance provided by many Alabama farmers and agribusinesses, the Alabama Cooperative Extension Service, the Alabama Forestry Commission and the National Oceanic and Atmospheric Administration. We wish to heartily thank all of those individuals who voluntarily provide the basic data about the varied aspects of Alabama's agricultural industry.

A special thanks and best wishes is extended to Commissioner Albert McDonald who will soon end his second term as Alabama's Commissioner of Agriculture and Industries. Commissioner McDonald has been very supportive of our office and agricultural statistics. The Commissioner has been a leader at NASDA (National Association of State Departments of Agriculture). NASDA and USDA have an agreement to maintain a data collection system that permits cost-saving survey activities by a highly trained corps of enumerators.

I also express my sincere appreciation to the staff listed on page one who continually strive to provide quality agricultural statistics for Alabama.

Sincerely,

J. T. "Duffy" Barr
State Statistician

ALBERT McDONALD
COMMISSIONER

**A Message
from the
Commissioner**

Every five years, the Alabama Agricultural Statistics Service publishes an Alabama Agricultural Statistics Bulletin that compiles revised data for five years and holds one year of preliminary statistical data. This year's Bulletin consists of preliminary data for 1989 and revised data for the period 1984 through 1988.

This compilation of data for the past six years can be particularly helpful to farmers, businessmen and investors who make important decisions based on such statistics. These decisions, in turn, impact the lives of all consumers in our state and throughout the country.

The Alabama Agricultural Statistics Service operates as a cooperative venture of the U.S. Department of Agriculture and the Alabama Department of Agriculture and Industries. A second cooperative venture exists between the Statistics Service and Alabama farmers who contribute their time to answer the surveys on which the essential reports issued by the Service are based.

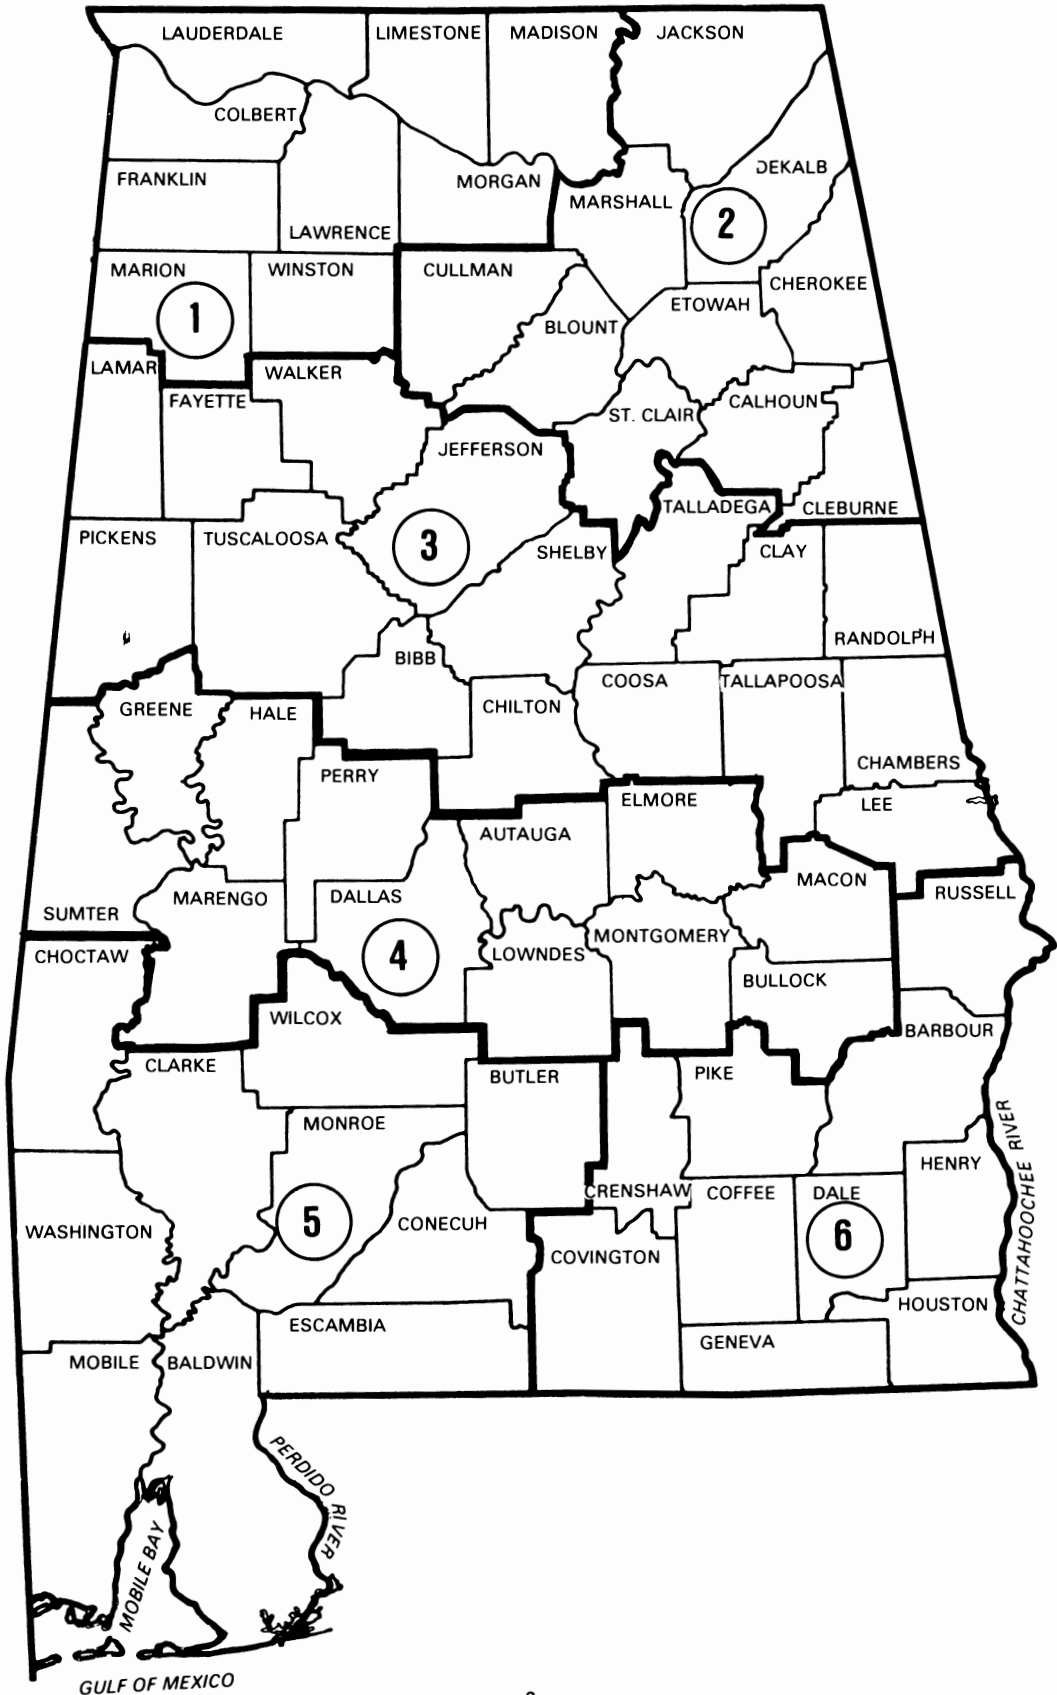

Such cooperative efforts, which result in the production of this and other publications, are to be commended. Without these efforts, the agricultural industry would lose a valuable business tool.

Albert McDonald
Commissioner

1989 WEATHER SUMMARY FOR THE STATE OF ALABAMA

ALABAMA'S WEATHER...AN OVERVIEW

Rainfall totals in 1989 showed a marked contrast from the previous dry year. The year started with average temperatures above normal in January. Rain amounts ranged from above normal in the north to below normal in the south. The wet weather continued over the north in February with drier weather near the coast. Although temperatures averaged above normal, lows in the teens occurred on February 23 to 25 with lower 20's along the coast. March continued the above normal temperatures and above normal rain in the north. Rain amounts continued below normal in the south but no extended dry periods had occurred since the beginning of the year. Monthly temperatures continued to average below normal through August. Rain amounts were variable from March through May with many monthly totals below normal but no extended dry periods. June was a very wet month with 6 to 12 inches of rain at most locations. Above normal rain amounts continued in July except for Mobile and Baldwin counties. Five to 10 inches of rain were common. Drier weather returned to the state in August, with most rain totals 1 to 3 inches but with less than 1 inch in the extreme southeast. Temperatures averaged near normal over most of the state during September and October, with variable rain amounts from well above normal to below normal. November was warm and wet. Lows dipped into the 20's except for low 30's along the coast. Rain amounts were 4 to 6 inches north and 3 to 6 inches south. December ended the year with cold weather and below normal rainfall north and above normal south. Two to 4 inch amounts were common over the north, with 5 to 7 inches central and south. Some snow occurred in the north and light snow in the south provided one of the first white Christmas holidays on record. Temperatures averaged 7 to 10 degrees below normal. Lows fell into the minus reading across the north with single digits all the way to the coast over the Christmas holiday period. Most of Alabama received 60 to 75 inches of rain during the year. The heavier amounts occurred across the Tennessee Valley and over portions of central Alabama. In these areas, the annual rain amounts were 10 to 20 inches above normal. Elsewhere, annual rain totals were generally 5 to 10 inches above normal. Rain periods were well distributed during the year, with extended dry periods mostly during August. It is notable that no extended periods of extremely hot weather occurred during the year. Highest temperatures ranged from middle 90's in the north to middle and upper 90's central and south. No reporting station recorded a 100-degree reading during the year. No tropical storm system became a major threat to the state although hurricane Hugo caused major damage along the South Carolina coast.

Ample rain finally occurred over the northern half of the state on 12 to 14 days in **January**, with totals of 5 to 10 inches common. This was 1 to 4 inches above normal for the month. In the remainder of Alabama, rain fell on 9 to 13 days with amounts of 2 to 4 inches common. This was 1 to 3 inches below normal. Temperatures were warm, with the monthly average 5 to 10 degrees above normal everywhere. The warmest afternoon highs were in the low 70's across the Tennessee Valley with upper 70's central and south. Extreme lows were in the low to middle 20's north with upper 20's and low 30's central and south to middle 30's in Mobile and Baldwin counties.

Considerable rain continued over the Tennessee Valley in **February**, with most totals between 7 and 10 inches. Albertville reported almost 13 inches. Elsewhere most amounts were between 2 and 4 inches with less than 2 inches closer to the coast. Rain was reported on 15 days in the Tennessee Valley and only 5 days in the extreme southwest. Average temperatures for February were a degree or two above normal. However, a hard freeze hit Alabama on February 23-25. Lows fell into the teens except for low 20's near the Florida border and along the coast. The warmest afternoon temperatures ranged from upper 70's in the extreme north to low 80's elsewhere.

March was a warm month. Average temperatures were 1 to 4 degrees above normal. The warmest highs were in the low 80's north with middle and upper 80's central and south. The coldest lows ranged from around 30 degrees in the northern half of the state to low 30's over Mobile and Baldwin counties. Rain fell on 8 to 11 days during the month, with totals of 5 to 8 inches. This was an inch below normal to an inch above normal. Rain totals since January 1 were 15 to 24 inches in the northern portion of the state and 10 to 15 inch amounts central and south. This was 4 to 8 inches above normal in the north and 2 to 8 inches below normal in the central and south.

Temperatures for **April** averaged 2 to 4 degrees below normal, but extremes in both highs and lows did occur. The extreme highs were in the upper 80's with some low 90's in the southeast. Extreme lows were in the upper 20's north. In the central and south most lows were in the low and middle 30's with upper 20's in colder locations. Rain fell on 5 to 10 days. Amounts were 1 to 4 inches in the north and 2 to 6 inches in the central and south.

1989 WEATHER SUMMARY FOR THE STATE OF ALABAMA (cont.)

Temperatures for most of **May** were below normal. The final week of the month brought readings much above normal. Overall average temperatures for May were around 2 degrees below normal. Extremes ranged from 94 at Headland and Brewton to 36 at Pinson. Most of Alabama reported at least 4 inches of rain during the month. The greatest monthly total was 7 inches at Fairhope. Rain fell on about 10 days in most areas with the usual variability which provided some locations several inches more than normal while other areas ended the month with a 1 to 2 inch deficit.

June was a very wet month across Alabama. Rain was recorded on 12 to 18 days during the month. Totals of 6 to 9 inches were common, with local areas receiving 10 to 12 inches. Some isolated locations in the central counties recorded 16 to 18 inches of rain. Most totals were 5 to 10 inches above normal. Temperatures averaged 1 to 2 degrees below normal. The warmest daily temperatures were in the low to mid 90's while the coolest lows were in the mid-50's north to mid-60's south.

The wet weather continued in **July**. Only areas in Mobile and Baldwin counties ended the month with below normal rainfall. Rain was recorded on 15 to 20 days of the month. Totals of 5 to 10 inches were common with local areas recording over 10 inches. Some of the heavier rain amounts include 14.56 inches at Centerville and 14.21 at Wadley. Average temperatures for the month were 1 to 2 degrees below normal. Several stations reported a maximum of 96 degrees.

A return to drier weather occurred in **August**. Rain fell on 2 to 5 days in the northeast and 5 to 8 days in the remainder of the state. Rain totals were mostly between 1 and 3 inches, which was generally 1 to 2 inches below normal. Near 5 inches was recorded only in isolated areas. The main exception to this rain pattern was in the southeast where a number of areas recorded under 1 inch of rain, with totals 2 to 3.5 inches below normal. Temperatures averaged 1 to 3 degrees below normal. The warmest highs ranged from middle 90's in the north to upper 90's central and south. Lows cooled into the low 50's in the Tennessee Valley to around 60 degrees central, with low 60's in the extreme southeast and Mobile and Baldwin counties.

Rain was reported around 15 days during **September** in the north and 5 to 10 days over the remainder of the state. Most totals were between 3 and 6 inches but amounts varied over a wide range. The lowest amounts occurred in the south with just over an inch of rain falling at some locations. Several north Alabama locations had totals near 11 inches. Average temperatures were within a degree of normal. Nearly all reporting stations had maximums in the 90's, with 98 at Mobile being the warmest. Lowest readings were in the 40's except for the middle and upper 50's in the southeast and coastal areas. The lowest reading was 41 at Winfield.

Temperatures in **October** were near normal except for the extreme west and southwest where they averaged 1 to 3 degrees below normal. The warmest highs were in the 80's with a few upper 80's in the south. Coldest temperatures ranged from upper 20's to low 30's with some low and middle 20's in normally colder locations. Precipitation amounts were generally below normal during the month. Rain was recorded on only 3 to 6 days during the month. Heavier amounts occurred in the Wiregrass area where 5 to 7 inch amounts were common. Elsewhere, rain totals were in the 2 to 4 inch range with a few areas receiving less than 2 inches.

November was warm with average temperatures 1 to 3 degrees above normal and rainfall generally above normal. The warmest highs were around 80 degrees in the north to low and middle 80's in the central and southern areas. The coldest temperatures were in the low and middle 20's in the north with teens in colder locations, while middle to upper 20's occurred elsewhere except for low 30's in Mobile and Baldwin counties. Rain was reported on 8 to 12 days. In the north, rain totals were mostly between 4 and 6 inches with over 7 inches in local areas, while in the central and south the totals were mostly between 3 and 6 inches with local amounts over 10 inches in the extreme south and southeast.

December was a cold month with precipitation amounts 1 to 2 inches below normal in the north and 1 to 2 inches above normal in the south. The average temperatures for the month were 7 to 10 degrees below normal. Daily highs only warmed to around 70 degrees across the Tennessee Valley with low 70's central and south. The coldest lows were near minus 5 degrees over the northern half of the state with single digits all the way to the coast. Precipitation was recorded on 9 to 12 days with some snow in the north and flurries along the southern border. Rain totals were between 2 and 4 inches in the north with local areas recording over 6 inches. Five to 7 inch amounts were common in the central and south with over 9 inches in local areas.

CROPS REVIEW

1989

JOEL D. MOORE

Wetter than normal conditions during the growing season and relatively dry conditions during the late summer and fall was the major story for the crop year of 1989. The above normal rainfall was beneficial to most agricultural areas, but the wet conditions also had an adverse effect on land preparation and spring plantings. Marketings of field crops, vegetables, fruits, nuts, nursery items, and farm forest products, generated \$791 million for farmers in the state during 1989, a decrease of 3 percent from 1988. The production of all crops accounted for 29 percent of the total cash receipts from farm marketings in 1989.

The principal crops planted in Alabama during 1989 decreased in total acreage by 4 percent from 1988, but the value of production showed only a slight decrease from the previous year. Higher prices for cotton, wheat, potatoes, and sweetpotatoes more than offset the decline in the prices received for all other crops. Cotton showed the largest acreage decrease from 1988, dropping 62,000 acres from the previous year. Corn for grain, however, reversed its downward trend by showing a slight increase to 180,000 acres, while sorghum rose to 45,000 acres. Peanut harvested area was the largest since 1951. Soybeans showed a slight increase in acreage from 590,000 in 1988 to 600,000 acres in 1989. Acreage for wheat and oats increased by 30,000 and 10,000 acres, respectively, from the year earlier. Alabama continued to rank second in the production of peanuts in the United States and eighth in the production of cotton.

Spring planting got underway on time, but did not stay on schedule for long, as wet weather prevented farmers from entering their fields. By early April nearly half the state was 1 to 2 weeks behind normal in land preparation. Soil moisture supplies were rated as mostly adequate in March and adequate to surplus in April. The state's fruit crops suffered some damage from a late February freeze, as many trees had bloomed early due to an unseasonably warm winter. As spring planting continued farmers took advantage of occasional breaks in the weather and completed the seeding of most crops on schedule. Farmers began harvesting the first cutting of hay during the last half of April and continued until the first part of July. Frequent showers kept soil moisture mostly adequate to surplus during much of May and into June. The condition of the winter wheat crop remain fair to good throughout the growing season with combining beginning in early May. Harvest of small grain crops were delayed in many areas as much as three to four weeks by persistent rains, which forced harvest into the first week of August. Planting of double-cropped soybeans, consequently, was also delayed with a portion of the crop planted during this same period.

Adequate to surplus soil moisture continued into July. The growing season proved to be excellent for Alabama's corn crop. A new state record for yield was realized at 81 bushels per acre, surpassing the previous record set in 1985 by six bushels. Corn harvest began slightly ahead of normal in mid-July and progressed at a normal pace through the first part of November. The state's spring potato crop also benefitted from the numerous spring showers and the crop produced a record yield of 240 cwt. per acre. Most hay producers experienced excellent cuttings with the average yield tying a state record of 2.20 tons per acre.

By mid-August the frequent showers experienced early in the year became only a memory, as the weather pattern for the year reversed and hot, dry conditions began to take their toll on many of the state's row crops. Peanut harvest began in late August and was completed by mid-October, well ahead of schedule. Soybean harvest began the latter part of September and progressed normally until completion in mid-December. Cotton harvest began on schedule about mid-September, but soon lagged behind normal as showers in the northern portion of the state kept harvesting equipment out of fields. By mid-November harvesting began to pick up and continued at a normal pace until completion at mid-December. Overall, soil moisture remained adequate the remainder of the year.

Pean growers entered the fall with a better than normal size crop, but excessively high moisture levels from early spring to late summer prevented growers from applying fungicides in defending their crop against scab infestation. The dry conditions from mid-August to September also adversely affected the quality of the crop and prices. The harvest of most of the state's row crops was completed on schedule. Final yields for peanuts, soybeans, and wheat showed decreases from 1988, but was offset by yield increases for cotton, corn, and sorghum.

ALABAMA'S FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1989

Crop	Unit	Harvested	Yield per Harvested Acre	Production	Value of Production
		Thousand Acres	Unit	Thousand Units	Thousand Dollars

1/ Beginning September 1, 1986, all stocks surveys were changed to four quarterly periods (December 1, March 1, June 1, September 1). Prior to 1986, the end of season for corn was October 1 and September 1 for soybeans.
 2/ On-farm stocks plus off-farm stocks. 3/ Per program modification: Stocks estimates for oats will be made as of June 1 each year; sorghum stocks estimates, each June 1 and September 1. *Unpublished to avoid disclosing individual operations.

LIVESTOCK REVIEW

1989

SCOTT A. HINTON

Cattle Numbers Down 1 Percent: All cattle and calves in Alabama as of January 1, 1990 totaled 1,780,000 head. This is 1 percent below the January 1 inventory last year but 2 percent above the January 1, 1988, inventory. Total cows on hand decreased 1 percent from last year's inventory of 940,000 head. Beef cows were 1 percent below the 1989 estimate of 895 thousand head. Milk cows were down 11 percent. Other class estimates on January 1, 1990, are as follows: All heifers 500 pounds and over, 210 thousand head, same as last year; beef cow replacements, 140 thousand head, 1 percent below last year; milk cow replacements, 14 thousand head, same as last year; other heifers, 56 thousand head, up 4 percent from last year; steers totaling 100 thousand head, up 5 percent from last year; and calves under 500 pounds, at 480 thousand head, decreased 3 percent from January 1, 1989.

Hogs: Alabama's December 1, 1989, hog and pig inventory was 300,000 head, down 13 percent from last year. Breeding dropped to 36,000 head, down 12,000 head from a year earlier. Market hogs decreased to 264,000, down 11 percent. The 1989 pig crop totaled 468,000 head, down 17 percent from 1988. Pork producers farrowed 61,000 sows during 1989, down 22 percent from the previous year. Alabama ranked 21st among states in total hog numbers.

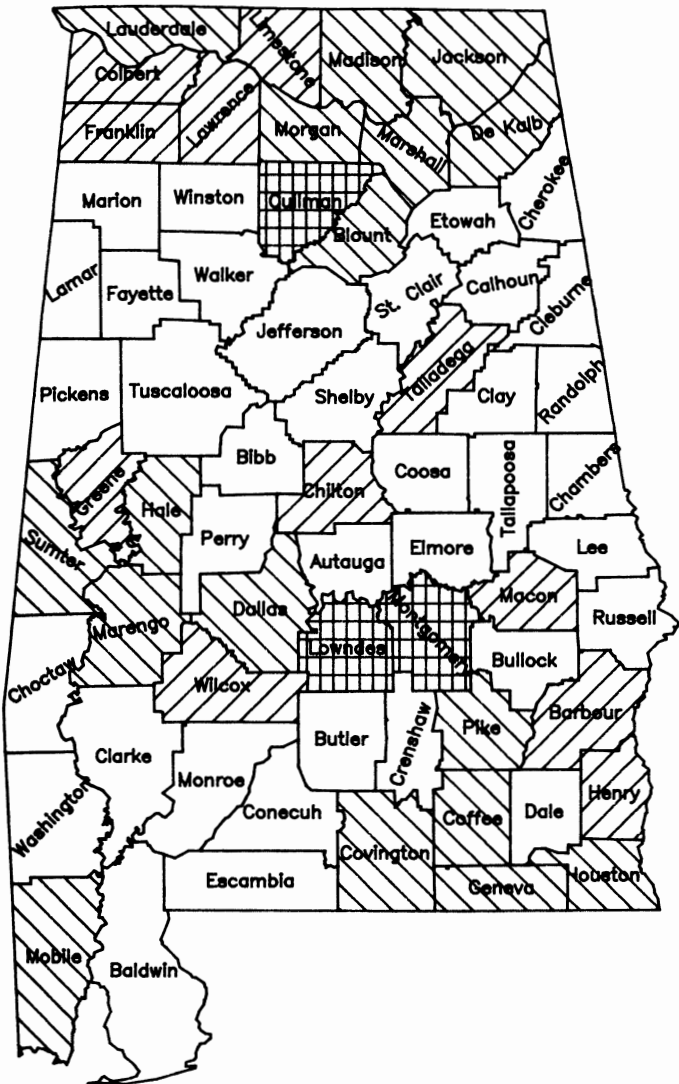

4

Milk Production Unchanged: Alabama's dairymen produced an estimated 523 million pounds of milk during 1989, virtually unchanged from the 524 million pounds during 1988. Production per cow averaged 12,163 pounds, compared with 11,909 pounds the previous year. The inventory, at 40,000 head on January 1, 1990, is down 11 percent from the 45,000 on hand January 1, 1989.

Red Meat Production: The 1989 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 232.0 million pounds (dress weight). This was slightly below the 1988 level. Cattle slaughter totaled 270,600 head, 4 percent above a year earlier. Calf slaughter totaled 500 head, unchanged from the previous year. Hogs butchered, at 203,700 head, was down 9 percent from a year ago.

POULTRY REVIEW

1989

SCOTT A. HINTON

Broiler Production Up 7 Percent: Alabama broiler producers marketed 750.1 million birds in the 1989 marketing year, an increase of 47.3 million from the 702.8 million marketed in 1988. Alabama is the third largest broiler-producing state in the United States.

Egg Production Decreased: During 1989, Alabama's laying flocks produced 2,184 million eggs, down 412 million from the previous year. Hens and pullets of laying age on hand as of December 1, 1989, were 9.6 million, compared with 10.0 million in 1988. Alabama ranked tenth nationally in the production of eggs.

Hatchery Production Up 8 Percent: Commercial hatcheries in Alabama hatched a record 921.0 million chicks in 1989, 67.9 million more than the previous high of 853.1 million chicks hatched in 1988. Egg-type chicks hatched was 17.2 million, compared with 11.3 million in 1988. Broiler-type chicks hatched totaled 903.8 million, 62.0 million more than in 1988. Broiler-type chicks hatched accounted for 98 percent of the total hatch in the state. Alabama hatcheries shipped 101.6 million broiler-type chicks to other states in 1989, while 18.1 million were shipped into Alabama.

PRICES REVIEW

1989

CLAYTON J. MCDUFFIE

Prices Received by Farmers: Prices received by farmers represent monthly and marketing year averages received by farmers at the point of first sale for all grades and qualities of the commodity sold. Points of first sale by farmers range from bulk sales at the farm to packed and graded products delivered to a local market. For crops the price refers to all sales, regardless of the year harvested. The average price concept is that price which would result from dividing the total dollars received by all farmers, before any marketing charges are deducted, by the total quantity sold. Contract sales are reported in the month of settlement, not when agreements are made. Transactions are finalized when delivery and payment are completed.

The All Commodity Index of Prices Received by Alabama farmers averaged 612 percent of the 1910-14 = 100 base on 1989, compared with 576 in 1988. This was a 6 percent increase over 1988 and a 15 percent increase over 1987. An increase in prices during 1989 for cattle, broilers, eggs, and cotton was partially offset by a slight decline in hogs, soybeans, and corn prices.

The Livestock and Products Index, one of the components of the All Commodity Index was 625 percent of the base in 1989, up 9 percent from the 1988 average. Beef cattle prices averaged \$63.20 per hundred weight (cwt.), up from the 1988 price of \$60.30. The average price for calves also showed a significant increase from the previous year. The average price for calves was \$85.90 per cwt. in 1989, \$84.60 per cwt. in 1988. Steers and heifers averaged \$73.20 per cwt. compared with \$70.70 per cwt. in 1988. Hogs averaged \$39.70 per cwt., \$.50 below 1988. Broilers, at \$.360 per pound, were \$.035 higher than in 1988. Egg prices were significantly higher at \$.570 per dozen, compared with \$.382 in 1988. Milk sold wholesale by farmers averaged \$14.90 per cwt., \$.70 above the 1988 price.

The other component of the All Commodity Index, the Crop Index was 580 percent of the base in 1989, the same percent as the 1988 average. Soybeans averaged \$5.70 per bushel, well below the \$7.58 for 1988. The corn price averaged \$2.60 per bushel, \$.20 per bushel less than a year ago. Wheat averaged \$3.50 per bushel, up from the 1988 average price of \$3.30. Potatoes, at \$10.80 per cwt., compared with \$7.05 a year ago. Peanuts averaged \$.285 per pound in 1989, compared with \$.295 in 1988. The cotton price of \$.632 per pound was \$.099 above the 1988 price.

1/ Marketing year: December-November basis. 2/ Estimates are for market eggs instead of all eggs beginning December 1982.
3/ Marketing year: September-August basis. 4/ Monthly and season average prices based on 480-lb. net weight bale. 5/ Marketing year: August-July basis. 6/ Monthly price estimates discontinued July 1986.

CASH RECEIPTS REVIEW

1989

JOEL D. MOORE

Farm Cash Receipts: Cash receipts from farm marketings for 1989 increased 8.4 percent from \$2,512,028,000 in 1988 to \$2,723,264,000. Livestock and poultry products, valued at \$1,932.4 million, accounted for 71.0 percent of the total, while crops totaled \$790.9 million to make up the remaining 29.0 percent. Forestry receipts increased 7.9 percent from \$246.4 million in 1988 to \$265.7 million. Total farm and forestry receipts (including government payments) increased 8.2 percent from \$2,872,909,000 in 1988 to \$3,109,849,000. Cash receipts do not include on-farm use of agricultural commodities or other uses which did not involve a monetary transaction.

Alabama poultry and poultry products accounted for 47.3 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 17.3 percent of the total receipts. Greenhouses, sod farms, and nurseries were third at 6.2 percent, followed by peanuts at 5.8 percent, cotton 4.5 percent, farm forest products at 3.7 percent, soybeans and dairy both at 2.9 percent, all vegetables (including potatoes) at 2.5 percent, then hogs at 1.7 percent. Sales from these ten enterprises made up 94.7 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers and eggs totaled \$1,286.8 million in 1989, up \$206.9 million from the 1988 total of \$1,079.9 million. Cattle and calf returns totaled \$471.1 million, up \$18.4 million from the 1988 total of \$452.7 million. Receipts from cotton, peanuts, soybeans, and vegetables (including potatoes) accounted for 54.1 percent of the crop receipts.

Cash receipts tables: In the county tables, state totals may not add due to rounding, and those counties with asterisks will be included in "Other Counties" to avoid disclosure of individual operations.

Definitions:

Farm Forest Products: stumpage revenue from sales of forest products by operations classified as farms. Data provided by Alabama Forestry Commission.

Non-farm Commercial Timber: stumpage revenue from sales of forest products by other private, forest industry and government. Data provided by Alabama Forestry Commission.

Government Payments: includes both cash payments for feed grain, wheat, cotton, wool act, amount paid under agricultural and conservation programs, miscellaneous payments under programs such as Rural Clean Water and Disaster, as well as payment-in-kind (PIK).
