NON CIRCULATING

**A Message
from the
Commissioner**

I am pleased to present the **Alabama Agricultural Statistics**. This report documents the fine working relationship and cooperative efforts between the Alabama Department of Agriculture and Industries and the United States Department of Agriculture. More importantly, it documents the efforts of our state's farmers.

Agriculture plays a very important role in our state's economy, and the **Alabama Agriculture Statistics** contains a comprehensive record of the production and marketing of the state's agricultural products. In 1985, total cash farm income of Alabama farmers totaled almost \$2.2 billion. The preliminary 1986 figures show 52,000 farms in Alabama totaling about 11 million acres of land.

Despite untimely periods of drought and rainfall, our country's farmers produce the most wholesome food for the lowest cost of any nation in the world. The acreage, crop, yield and price statistics included in this bulletin can assist our farmers as they plan their next year's crops. The Department of Agriculture and Industries, in conjunction with USDA, is glad to be able to offer this service.

A handwritten signature in black ink that reads "Albert McDonald". The signature is written in a cursive, flowing style.

Albert McDonald
Commissioner

ALABAMA AGRICULTURAL STATISTICS SERVICE

U.S. DEPARTMENT OF AGRICULTURE

in cooperation with

ALABAMA DEPARTMENT
OF AGRICULTURE AND INDUSTRIES

MARSHALL L. DANTZLER
State Statistician

ALBERT McDONALD
Commissioner of Agriculture

FOREWORD

This annual bulletin is twenty-nine in a series dating back to 1948. This publication remains the most popular of our releases, based on subscriber requests. We have attempted to make these bulletins the most complete accumulation of current statistical data available relating to agriculture in Alabama. This issue contains the preliminary data series of state and county estimates for 1986 and comparable data for 1985. Data for 1984 and earlier years has been revised in many instances and this published series should be used in lieu of any previously published data.

The estimates in this bulletin are developed primarily from sample surveys. In recent years we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old standby, the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also linked closely to the degree of response. In Alabama the response to our surveys has been gratifying. I want to say a special thanks to the many Alabama farmers and agribusinessmen who assisted us by providing basic data about this state's agriculture. You may be assured we have kept out pledge of confidentiality of reported data.

Individual reports from farmers have been supplemented by those from the Alabama Cooperative Extension Service. In particular, income data at the county level comes from their contributions.

I also express my sincere appreciation to the staff of the Alabama Agricultural Statistics Service for their continued efforts to provide quality statistics for the State of Alabama.

Sincerely,

Marshall L. Dantzler
State Statistician

CROPS REVIEW

1986

Joel D. Moore

In 1986 Alabama crop producers struggled through one of the most difficult years on record, as they faced a late season freeze, an extended drought, higher production costs and lower prices for most commodities. The \$645 million generated in 1986 from the sales of field crops, vegetables, fruits, nuts and nursery items fell 24 percent from the 1985 level. Even though crop production continues to be a vital part of the state's agriculture, it only accounted for 31 percent of the total cash receipts from farm marketings in 1986.

Acres planted for soybeans, cotton, peanuts, corn and sorghum showed an overall decline of 25 percent from 1985. Corn harvested for grain dropped to the smallest amount on record at 270,000 acres and soybean acreage dropped to the lowest level since 1970. The only acreage to show a significant increase from the year earlier was peanuts, which was up 9 percent. Alabama ranked second in the United States in the production of peanuts and eighth in the production of cotton during 1986.

Alabama experienced one of the worst droughts in the past century during 1986. Farmers suffered losses as a result of the drought from replanting, reduction in yields, crop abandonment and scorched hay fields. Land preparation and spring plantings progressed at a normal pace during February, March and April as weather conditions were generally favorable. Below normal rainfall and above normal temperatures, however, kept soil moisture supplies mostly short. The condition of the winter wheat crop slowly began to deteriorate from the lack of rain during this time. A late season freeze in March damaged the early producing peach crop, along with the state's spring planted vegetable crops.

The seriousness of the drought became more evident in April, as this is the optimum time for planting. Lack of moisture forced farmers to delay planting since the dry conditions were critically affecting seed germination and activation of chemicals. Scattered showers and thundershowers during May and June brought relief to some areas of the state, but overall soil moisture remained short. Most of the corn crop had been planted on schedule by the middle of May, but seedings of other major crops were anywhere from one to three weeks behind normal. Very little hay was harvested in the spring as many cattle producers found it necessary to graze their hay fields. The majority of the cotton and peanuts had been planted by mid-June, well behind normal, while soybeans and sorghum plantings were not completed until the second week in July.

The weather failed to improve during the summer months as dry conditions and above normal temperatures persisted. Harvest of the drought-stricken wheat crop finished on schedule by mid-July. Corn harvest began later that month and sorghum harvest began in early August. Many of these grain acres were not harvested but used for fodder because of the poor condition. Some relief arrived by mid-August with below to near normal temperatures and widespread rains. Rainfall totals at this time were still 4 to 24 inches below normal for the year statewide.

Favorable growing conditions during September proved beneficial for the late planted soybean and peanut crops. Digging of peanuts began in early September, but slowed considerably by month's end as growers hoped for further growth and development in the crop. Combining of corn and sorghum progressed at a normal pace with the harvest of cotton and soybeans beginning on schedule in late September. Small grain seedings began the middle of the month, well ahead of normal. October started off being dry but rains became more frequent later in the month and into November. Harvest efforts were not greatly hampered by the increased rainfall and most producers finished about on schedule. The lone exception being peanut growers, who did not finish combining until mid-November, almost a month behind normal. The wet conditions also prolonged the seeding of small grains till late December.

Overall, the production of crops was definitely affected by drought conditions in the spring and summer, but rains in late August and into the fall helped boost yields and prevented disastrous losses.

ALABAMA'S FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1986

Crop	Unit	Harvested	Yield per Harvested Acre	Production	Value of Production
		Thousand Acres	Unit	Thousand Units	Thousand Dollars
Corn	Bu.	270	57	15,390	28,472
Cotton lint 1/	Lb.	313	506	330	71,122 2/
Hay	Ton	700	1.60	1,120	73,920
Peanuts for nuts	Lb.	219	2,260	494,940	124,725
Soybeans for beans	Bu.	610	23	14,030	68,747

1/Production in 480 pound net weight bales. 2/Cottonseed would add \$7,390,000 to the value of production from the cotton crop.

LIVESTOCK REVIEW

1986

Robert L. Jefferson

Cattle: All cattle and calves in Alabama as of January 1, 1987, totaled 1,850,000 head. This is four percent above the January 1 inventory last year and one percent above the January 1, 1985, inventory. Brood cow numbers increased from 910,000 head January 1, 1986, to 960,000 head January 1, 1987. Beef cows increased 55,000 head but milk cows were down 5,000 head. Heifers for beef cow replacements were up 1,000 head, while milk cow replacements declined 1,000 head. Other heifers were down 4,000 head from a year ago. Steers 500 pounds and over increased 22 percent, and calves under 500 pounds increased one percent. The 1986 calf crop was placed at 860,000 head, up 5 percent from 1985. Alabama ranked 21st among states in all cattle, but 14th in the number of beef cows on farms.

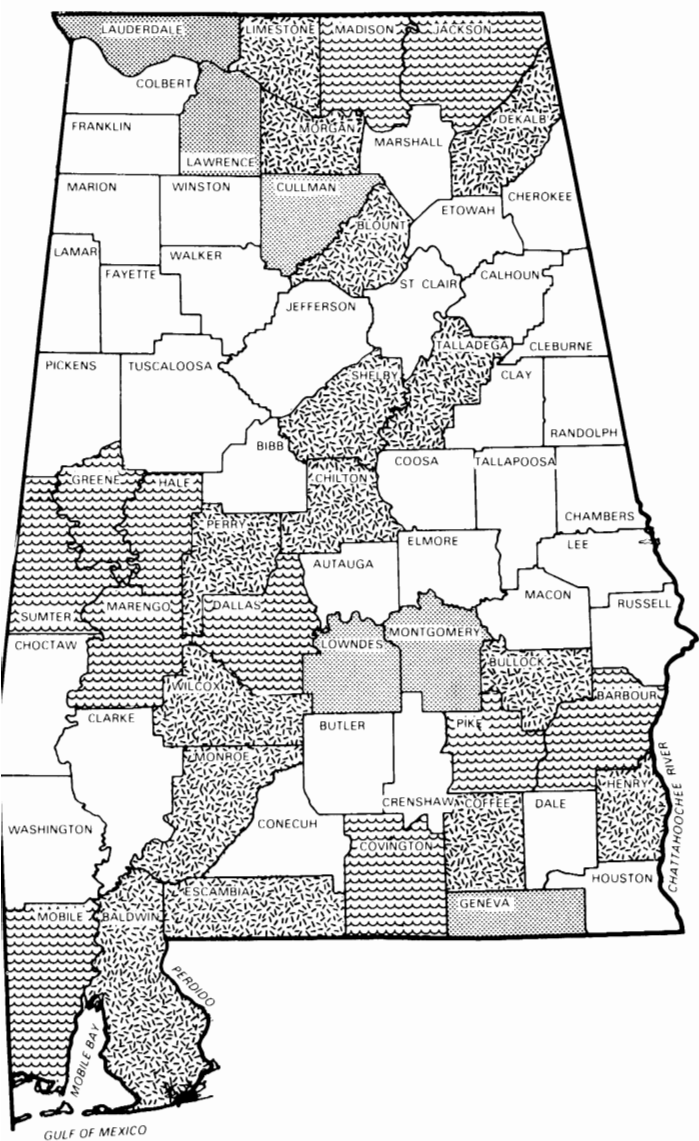

Hogs: Alabama's December 1, 1986, hog and pig inventory was placed at 380,000 head, 35,000 more than the previous year. Breeding rose to 55,000 head, up 5,000 head from a year earlier. Market hogs increased to 325,000, up 10 percent. The 1986 pig crop totaled 563,000 head, up 3 percent from 1985. Pork producers farrowed 76,000 sows during 1986, up 3 percent from the previous year. Alabama ranked 20th among states in total hog numbers.

Milk Production: Alabama's dairymen produced an estimated 529 million pounds of milk during 1986, down 3 percent from the 547 million pounds during 1985. The annual average number of cows milked was 44,000 head, 1,000 below the 1985 average. Production per cow averaged 12,023 pounds, compared with 11,163 the previous year.

Red Meat Production: The 1986 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 244.7 million pounds (dress weight). This was 9 percent more than the 1985 level. Cattle slaughter totaled 306,500 head, 14 percent above a year earlier. Calf slaughter totaled 1,300 head, 400 head less than the previous year. Hogs butchered, at 208,800 head, was down 56 percent.

1986

Forestine Herron

Broiler Production Up 5 Percent: Alabama broiler producers marketed 587.6 million birds in the 1986 marketing year, an increase of 25.8 million from the 561.8 million marketed in 1985. Alabama is the third largest broiler-producing state in the United States.

Egg Production Increased: During 1986, Alabama's laying flocks produced 2,723 million eggs, down 71 million from the previous year. Hens and pullets of laying age on hand as of December 1, 1986, were 11.2 million, compared with 11.3 million in 1985. Alabama ranked ninth nationally in the production of eggs.

Hatchery Production Up 6 Percent: Commercial hatcheries in Alabama hatched a record 728.3 million chicks in 1986, 20.6 million more than the previous high of 707.7 million chicks hatched in 1985. Egg-type chicks hatched was 12.9 million, compared with 11.3 million in 1985. Broiler-type chicks hatched totaled 715.5 million, 19.1 million more than in 1985. Broiler-type chicks hatched accounted for over 98 percent of the total hatch in the state. Alabama hatcheries shipped 90.5 million broiler-type chicks to other states in 1986, while 25.1 million were shipped into Alabama.

1/Marketing year: December-November basis. 2/Hens and pullets of laying age and annual egg production consist of commercial table egg layers, broiler breeders, egg breeders, and farm flocks of 400 birds or less.

PRICES REVIEW

1986

CLAYTON J. MCDUFFIE

Prices Received by Farmers: The All Commodity Index of Prices Received by Alabama farmers averaged 534 percent of the 1910-14 = 100 base in 1986, compared with 511 percent in 1985. This was an increase of 5 percent from 1985, but a seven percent decline from 1984. The increase from 1985 to 1986 is attributed to an increase in hogs, broilers and egg prices. This was partially offset by lower cattle and most crop prices.

The Livestock and Products Index, one of the components of the All Commodity Index, was 544 percent of the base in 1986, up 8 percent from the 1985 average. Beef cattle prices averaged \$43.00 per hundred weight (cwt.), down \$3.20 from the 1985 price of \$46.20. The average price for calves was \$56.90 per cwt., down \$.60 from a year ago. Broilers, at \$.33 per pound, were \$.05 higher than in 1985. Egg prices, at \$.558 per dozen, were \$.057 higher than 1985. Milk sold wholesale by farmers averaged \$14.40 per cwt., \$.10 below the 1985 price. Hogs averaged \$48.00 per cwt., \$4.40 above 1985.

The other component of the All Commodity Index, the Crop Index was 513 percent of the base in 1986, one percent below the 1985 average. Soybeans averaged \$4.90 per bushel, down \$.16 from the 1985 price of \$5.06. The corn price averaged \$1.85 per bushel, \$.45 below a year ago. Wheat averaged \$2.60 per bushel, down \$.45 from the 1985 price. Potatoes, at \$7.25 per cwt., compares with \$5.45 a year ago. Peanuts averaged \$.255 per pound in 1986, compared with \$.227 in 1985. The cotton price of \$.488 per pound was \$.068 below the 1985 price.

Prices Paid by Farmers: USDA's prices paid program had significant changes during 1986. Monthly surveys are now quarterly, semiannual or annual surveys. Prices paid and indexes are now computed and published in January, April, July and October. State level estimates were also discontinued in 1986.

The U.S. 1986 average Index of Prices Paid for production items, interest, taxes and wage rates was 151 (1977=100), down 6 points (3.8 percent) from 1985. The Index of Prices Paid for commodities and services, interest, taxes and wage rates was 159 (1977=100), compared with 163 in 1985.

CASH RECEIPTS REVIEW

1986

Joel D. Moore

Cash Farm Receipts: Total cash farm receipts from farm marketings for 1986 declined 3.5 percent from \$2,151,464,000 in 1985 to \$2,075,782,000. Livestock and livestock products, valued at \$1,430.8 million, accounted for 69 percent of the total, while crops totaled \$645 million to make up the remaining 31 percent.

Alabama poultry and poultry products accounted for 45.2 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 15.9 percent of the total receipts. Peanuts were third at 6.1 percent followed by greenhouses and nurseries at 5.9%, soybeans 4.1%, cotton 3.7%, potatoes and vegetables at 3.7%, dairy at 3.6%, then farm forest products at 3.6%. Sales from these nine enterprises made up 91.8 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers and eggs totaled \$937.1 million in 1986, up \$148 million from the 1985 total of \$789.1 million. Cattle and calf returns totaled \$329.0 million, down 5.0 percent from the 1985 total of \$346.3 million. Receipts from cotton, soybeans, and peanuts accounted for 44.8 percent of the crop receipts. Combined returns from these crops were down 33.2 percent from 1985.

Cash receipts tables: In the county tables, state totals may not add due to rounding, and some data will be included in "Other Counties" to avoid disclosure of individual operations.
