## PERFORMANCE OF SOYBEAN VARIETIES IN ALABAMA, 1987

D. L. Thurlow and W. C. Johnson<sup>1</sup>

### INTRODUCTION

Soybean variety tests are conducted annually by the Alabama Agricultural Experiment Station. The 10 locations used represent the major soil and climatic regions of Alabama. These locations are divided into logical soybean growing regions. The regions and locations are:

<u>Region</u>	<u>Location</u>
Northern	Belle Mina, Crossville
Central	Camden, Prattville
Southern	Brewton, Headland, Monroeville
Black Belt	Marion Junction (2 soils)
Baldwin-Mobile	Fairhope

A standard test is grown at each location. In addition, a late date of planting test is grown in each region, an early date of planting test is grown at Brewton, and preliminary tests are grown in the northern, central, and southern regions. The preliminary test contains advanced experimental lines and released varieties which are new to that particular region. These varieties will be placed in the standard test if their performance warrants.

---

<sup>1</sup> Respectively, Associate Professor and Professor of Agronomy and Soils.

## EXPERIMENTAL PROCEDURES

The standard tests were designed as a randomized complete block with four replications. Plot size was four 30- to 36-inch rows 20 feet long. Sixteen feet of the middle two rows were harvested for yield. Seeding rate was 60 pounds per acre (10 viable seeds per foot of row). The preliminary tests were planted in a randomized complete block design with three replications. The early and late planting date tests were arranged in incomplete lattice square designs, with nine entries per maturity group and four replications.

Two planting dates were used for the standard tests at Crossville, Prattville, Brewton, Marion Junction (Vaiden soil), and Fairhope. An entry must perform well in the early standard test before it is entered in the late date test. Results are reported by planting date in the tables, with date 1 being the standard full season planting and date 2 the later planting at all locations except at Brewton where date 2 is the standard test and date 3 is the later planting test. The Brewton early planting test in 1987 was not planted because of lack of moisture during late April and early May.

Data were collected on seed yield, moisture, lodging, shattering, plant height, and maturity date. Plot yields were adjusted to 13 percent moisture and converted to bushels (60 pounds) per acre. Lodging was scored on a scale of 1 to 5 as follows:

1 - almost all plants erect.

2 - either all plants leaning slightly (less than 45°) or a few plants down.

3 - either all plants leaning moderately (approximately 45°) or 25 to 50 percent of the plants down.

4 - either all plants leaning more than 45° or 50 to 80 percent of the plants down.

5 - more than 80 percent of the plants down.

Shattering was rated on a scale of 1 to 5 based on performance of the border row 14 days after maturity. A rating of 1 indicates no shattering and a rating of 5 is 20 percent or more shattering. Plant height was determined by measuring from the ground to the top of the plant at maturity. Maturity date was the day 95 percent of the pods were their mature pod color. Harvest was approximately 7 to 10 days later.

Severe stunting and chlorosis were observed in the varieties planted on the alkaline Sumter soil at the Black Belt Substation. A chlorosis rating was made in early August in 1986 and 1987 with rating of 1 to 10, where 1 was no noticeable change in green color from a normal soybean plant and 10 was plants losing leaves due to necrotic spots in leaves. The yields from areas that showed iron chlorosis are recorded for 1987 and also the 2-year averages, table 17.

#### SEASONAL CONDITIONS

Lack of rainfall in April resulted in a 2-week delay in planting in north Alabama and not planting the early test in Brewton. Poor stands were also the reason for no test at Monroeville Field. The lack of and poor distribution of rainfall from mid-July through early September resulted in very poor and inconsistent soybean yields in central and north Alabama. Rainfall amounts near Brewton and Fairhope were better in July and August, table 3, resulting in some respectable yields at these locations. In spite of the shortage of rainfall at Marion Junction, very good yields were obtained on the acid prairie soil.

## COMPARING VARIETIES

To aid in determining real yield differences, a statistical analysis of variance is performed on the data from each location. The L.S.D. (least significant difference) and C.V. (coefficient of variation) are given for each location's 1987 test, and the location's or region's 2- and 3-year averages. The difference in yield of two varieties must exceed the L.S.D. value for one variety to be considered superior to the others in yield in that particular test. The C.V. is a measure of the variability in an experiment. An increase in its value indicates an increase in the unexplained variability.

Since the performance of varieties varies with location and year, long-term averages from several locations are more reliable than 1-year performance. Three-year regional averages are considered a reliable evaluation of the relative performance of varieties.

A committee comprised of Department of Agronomy and Soils personnel involved in soybean extension and research work reviewed the past 3 years of soybean variety test data to assemble the list of acceptable varieties on page 39. The recommended varieties are not all equal in performance. Some are outstanding in one or more characteristics; while others may not be obviously outstanding, they might possess a satisfactory combination of all characteristics.

## ACKNOWLEDGMENTS

Appreciation is expressed to the following station superintendents and their staffs. It is their quality work which makes this report a reliable source of information for farmers in their areas.

Black Belt Substation Marion Junction	H. W. Grimes J.L. Holliman
Brewton and Monroeville Experiment Fields Brewton and Monroeville	J. R. Akridge
Gulf Coast Substation Fairhope	E. L. Carden N.R. McDaniel M.D. Pegues
Lower Coastal Plain Substation Camden	J. A. Little
Prattville Experiment Field Prattville	D. P. Moore
Sand Mountain Substation Crossville	J. T. Eason M. E. Ruf
Tennessee Valley Substation Belle Mina	W. B. Webster V. H. Calvert, II
Wiregrass Substation Headland	H. W. Ivey Larry Wells

Appreciation is also expressed to W. H. Hearn, Mien-Huei Tzeng, and Mrs. Sally Bagwell, Research Data Analysis, for the computation and analysis of the data in this report.

Coker 6727	18.8	-	4.4	-	23
AU 82-211	16.9	-	4.5	-	25
Pioneer 9791	9.1	-	6.1	-	22
Terra-Vig 717	8.1	-	5.4	-	23
<u>Maturity Group 8</u>					
Johnston	14.5	22.1	4.5	4.5	26
Hartz H 8112	15.3	17.5	4.2	3.5	26
Cobb	14.7	16.4	1.9	5.9	31
Coker 6738	12.6	16.0	7.0	5.4	23
Dowling	17.1	16.0	2.2	5.0	27
Hutton	12.2	15.4	2.3	2.3	26
Coker 368	6.7	8.6	7.1	7.2	23
Kirby	7.3	7.8	6.7	8.1	22
Foster	5.4	3.6	8.0	9.0	18

<sup>1/</sup> Chlorosis ratings were 1-10, with 1 being no chlorosis and 10 being plants that were losing leaves due to necrotic spots in leaves.

## RECOMMENDED SOYBEAN VARIETIES FOR 1988

This list of recommended varieties was prepared by the authors of this report, D. B. Weaver, Assistant Professor of Agronomy and Soils, and J. B. Henderson, Agronomist-Soybeans, Alabama Cooperative Extension Service, based on variety test performance for at least 3 years.

### Northern Alabama

<u>Early</u>	<u>Full season</u>	<u>Late</u>
Asgrow A 5474	Bradley	Braxton
Asgrow A 5980	*Centennial	Ransom
Bay	Hartz H 6130	
Bedford	Jeff	
Coker 425	Leflore	
Coker 485	RA 606	
Deltapine 105	Tracy M	
Essex		
FFR 561		
Forrest		
Hartz H 5171		
Hartz H 5370		
Pioneer 9571		

### Central Alabama

<u>Very early</u>	<u>Early</u>	<u>Full season</u>	<u>Late</u>
Asgrow A 5980	*Centennial	Braxton	Cobb
Deltapine 105	Davis	Deltapine 497	Coker 368
Forrest	Leflore	GaSoy 17	
Hartz H 5370	RA 680	Hartz H 7126	
Terra-Vig 505	Tracy M	New N.K. S 72-60	
	Yield King 613	Terra-Vig 708	
	Young	Terra-Vig 717	
		Wright	

### Black Belt (acid soil)

<u>Very early</u>	<u>Early</u>	<u>Full season</u>	<u>Late</u>
Bay	Centennial	Braxton	Cobb
Deltapine 105	Davis	Deltapine 417	Coker 368
Hartz H 5370	Deltapine 566	Deltapine 497	Dowling
Wilstar 550	Hartz H 6130	Hartz H 7126	
	Leflore	Ransom	
	RA 680		
	Tracy M		

(continued on following page)

Southern Alabama

<u>Very early</u>	<u>Early</u>	<u>Full season</u>	<u>Late</u>
Deltapine 105	Asgrow A6242	Braxton	Cobb
	Davis	Deltapine 417	Coker 368
	Jeff	Deltapine 497	Dowling
	Leflore	GaSoy 17	Johnston
	New N.K. S69-54	Hartz H 7126	Kirby
	RA 606	Terra-Vig 717	
	RA 680		
	Terra-Vig 616		
	Tracy M		

Baldwin-Mobile

<u>Very early</u>	<u>Early</u>	<u>Full season</u>	<u>Full season, late</u>
Bedford	Asgrow A 6242	Braxton	Cobb
Deltapine 105	Davis	Deltapine 497	Coker 368
Forrest	Jeff	Hartz H 7126	Coker 6738
	Leflore	New N.K. S72-60	Dowling
	New N.K. S69-54	Terra-Vig 708	Johnston
		Wright	Kirby

\* If present trend continues, these varieties will be dropped from recommended list.
