Performance of Soybean Cultivars in Alabama, 2014

K. M. Glass¹, C. D. Monks², D. Delaney³, and J. Brasher⁴

¹Agric. Program Assoc., ²Prof. & Dir. Res. Outlying Units; ³Extension Soybean Agronomist; and ⁴Field Data Manager Dept. of Crop, Soil & Environmental Sciences; Alabama Experiment Station; and ACES Auburn Univ., AL 36849

"The mission of the Alabama Variety Testing Program is to provide research-based, unbiased results on the performance of various crop hybrids, cultivars, and varieties to the agricultural community in our state. We are intent on conducting these trials in a manner that will result in maximum biological yield through methods common to the top-producing farms in Alabama. We are committed to providing this information in a rapid, timely manner for its use during the decision-making process. The success of the program rests upon our ability to help Alabama producers provide a safe, dependable source of food and fiber for all families as well as economic sustainability for theirs."

Methods

Cultivars were arranged in a randomized complete block experimental design with 4 replications. Plot size was 4 rows, 30- to 38-inches wide, and 20 to 25 feet long. Trials were managed according to the location and local practices (Tables 19, 20). All tests were fertilized according to soil test recommendations. Plots were harvested utilizing a small plot combine from the center 2 rows of each plot. Plot yields were adjusted to 13 percent moisture and converted to bushels (60 pounds/bushel) per acre.

Region	Ala. Exp. Station location and soil texture
North	Sand Mountain Research & Ext. Center Wynnvile fine sandy loam
	Tennessee Valley Research & Ext. Center Decatur silt loam
	Black Belt Research & Ext. Center Vaiden clay
	Plant Breeding Unit, E.V. Smith Res. Ctr. Cahaba fine sandy loam
Central	Prattville Agricultural Research Unit Lucedale fine sandy loam
	Brewton Agricultural Research Unit Benndale fine sandy loam
Southern	Gulf Coast Research & Ext. Center Malbis fine sandy loam
	Wiregrass Research & Ext. Center Dothan fine sandy loam

In 2014, soybean trials were not treated with foliar fungicides; however *fungicide treatment for disease control* will be included in the 2015 trials.

*No soybean trials at these locations;
**Not reported due to low yield caused by inclement weather (PBU).

Table 21 . Soybean Entries and Sources for 2014

Source	Entry
Bayer CropScience	HBK brand varieties
Tifton, Georgia	
Cache River Valley Seed	MorSoy brand varieties
Cash, Arkansas	
Crop Production Services	Dyna-Gro brand varieties
Kinston, Alabama	
Monsanto	Asgrow AG brand varieties
St. Louis, Missouri	
Mycogen Seed	Mycogen brand varieties
Marion, Arkansas	
Progeny Ag Products	Progeny brand varieties
Wynne, Arkansas	
Syngenta/NK Brand Seed	NK S brand varieties
Indianloa, Mississippi	
Terral Seed, Inc.	Terral REV brand varieties
Lake Providence, Louisiana	
UniSouth Genetics, Inc.	USG brand varieties,
Dickson, Tennessee	Allen RR
University of Arkansas	UA 5612C, UA 5213C, Osage, Ozark,
Fayetteville, Arkansas	R05-374*, R04-1250RR*, R04-1268RR*
* Experimental lines	

Acknowledgements

We would like to express our appreciation for the work and dedication of the directors, associate/assistant directors, and staff and field personnel of the Alabama Experiment Station outlying units without whom this work would not be possible. Thanks are also expressed to the producers and citizens of Alabama for supporting research on the production of food and fiber across our state.
