# The Commissioner Speaks

The Department of Agriculture and Industries is very proud of the great strides that have been made in Alabama agriculture in recent years. We are especially proud of the part this department has had in the orderly and healthy development of our agriculture and agri-business. We feel our agriculture is basically sound and our growth potential is unlimited.

The extensive growth we have experienced in recent years can be seen in the figures in this bulletin, which is one of a continuing series of the Alabama Agricultural Statistics Division. We were happy to cooperate with the United States Department of Agriculture in providing this important tool to our farmers, agricultural leaders and the agri-business community. With the rapid changes in agricultural needs and world wide demands in recent years, we have seen the importance of accurate agricultural data in determining the production of food and fiber. The information contained in this publication presents the current agricultural picture throughout the State of Alabama. Alabama producers and agri-business, thus, have updated information for planning their production and marketing programs.

This Bulletin is an illustration of the many ways we in the State Department of Agriculture and Industries cooperate with the United States Department of Agriculture and other agencies and organizations to avoid duplication of effort and to provide efficient and beneficial service to the agricultural and agri-business interest. This bulletin contains impartial information that is as accurate as our system can provide. We sincerely hope that it will be of value to everyone.

Sincerely yours,

A handwritten signature in dark ink, appearing to read 'McMillian Lane', written in a cursive style.

McMillian Lane  
Commissioner

## FOREWORD

This issue of Alabama Agricultural Statistics, is the sixteenth in a series started in 1948. Bulletins in this series bring together under one cover a summary of the various reports prepared and published by the Alabama Crop and Livestock Reporting Service during the year. In the past, bulletins were published biennially. Starting this year, publications will be made yearly in order to provide more current information. This bulletin revises the series of data for 1972 and carries preliminary estimates for 1973 and January 1, 1974 inventories.

Data presented in this bulletin are developed primarily from sample surveys. In recent years information furnished by volunteer reporters has been supplemented by enumerative surveys based on area and list samples. As agriculture becomes more specialized and concentrated on fewer farms, samples used in preparing agricultural estimates must be more scientifically designed.

Basic Statistical information, such as presented in this bulletin is important to all who make plans and decisions relative to ever changing agriculture. Producers need basic information in making production, marketing and storage plans. Other users of agricultural data include farm organizations and cooperatives; transportation agencies; processors and storage companies; manufacturers and agri-businessmen who provide goods and services to producers; insurance companies; credit agencies; agricultural colleges; research workers and personnel of local, State and Federal governments.

Special recognition and thanks are given to all who have made this bulletin possible by reporting voluntarily to us. We acknowledge the help of the many Alabama farmers, dealers, processors, hatcherymen, merchants and others who have cooperated in providing basis information of the State's agriculture. We also wish to give special recognition to Tim Placke under whose direction this publication was assembled and to our clerical staff for preparing and printing this bulletin.

Sincerely,

  
Donald B. Jones  
Statistician in Charge

## CROP REVIEW, 1973

by William T. Placke

The value of principal crops produced in Alabama during 1973 totaled \$454.2 million. These receipts, up 50 percent from \$303.5 million in 1972, reflect higher prices and increased production of most crops. Prices received by farmers during 1973 were considerably above the previous year for all crops except pecans. Production records were set for soybeans and hay with increased outturns registered for all other crops except cotton, wheat, Irish potatoes, sweetpotatoes, tobacco, fresh market vegetables and peaches.

Cotton remained as the State's most valuable crop with combined value of lint and seed placed at \$110.5 million, 28 percent above 1972. Other crops with relatively high values are: soybeans, \$106.3 million (up 74 percent from last year); corn, \$71.6 million (up 82 percent); peanuts, \$64.0 million (up 20 percent); and hay, \$32.7 million (up 34 percent).

Alabama farmers harvested principal crops from 3.1 million acres, up 5 percent from 1972. Record-high soybean acreage was harvested with increases recorded for all other crops except cotton, winter wheat, sweetpotatoes, crimson clover seed and watermelons.

Heavy rains and wet ground delayed preparation of land and planting during 1973. Crops generally emerged to even stands and growth of young seedlings was good. Prospects remained favorable until mid-September when dry weather set in over most of the State. Hardest hit were cotton and late planted soybeans. Open weather during most of the harvest season enabled farmers to get crops out of the field without much delay. Only a few scattered fields of cotton and soybeans remained to be harvested as the year ended.

Five Leading Crops: Acreage, yield, production and value, 1973

C r o p	Unit	Acres	Yield per	Production	Value of
		harvested	Harvested acre		production
		Thou. acres	Unit	Thou. units	Thou. dols.
Cotton lint	Lb.	510	423	449 <u>1/</u>	94,597
Cottonseed	Ton	-	-	169	15,903
Corn for grain	Bu.	610	46.0	28,060	71,553
Soybeans for beans	Bu.	920	21.0	19,320	106,260
Peanuts for nuts	Lb.	200	2,000	400,000	64,000
Hay	Ton	543	1.80	977	32,730

1/ Production in 480 pound net weight bales.

## ALABAMA AGRICULTURAL STATISTICS

## Number of farms and land in farms, 1965-74

Year	Farms	Land in farms	Average size of farms
	Number	Thousand acres	Acres
1965	98,000	16,000	163
1966	95,000	15,700	165
1967	92,000	15,400	167

## Livestock Review, 1973

by John T. Markham

Alabama livestock producers received a record \$349.8 million from marketings of cattle and calves, hogs and pigs, and sheep and lambs during 1973, or 24 percent above the \$282.8 million received for their 1972 marketings. Record high prices in 1973 more than offset the reduction in animals sold. The total value of cattle, hogs and sheep in Alabama's end-of-year inventory, at \$624.6 million, was 33 percent above a year earlier. The individual increases were: hogs-45 percent, cattle-32 percent and sheep-10 percent.

More Cattle in 1974: An estimated 2,240,000 cattle and calves were on Alabama farms January 1, 1974, up 6 percent from the previous record-large inventory of a year earlier. Increases were exhibited in all classes except milk cows and replacement heifers for milk which showed 4 percent and 21 percent declines, respectively. Beef cows, at 1,060,000, were up 6 percent while beef replacement heifers showed a 10 percent increase over the previous year. Alabama ranked 19th among the States in total cattle and 16th in beef cows. The inventory value of cattle and calves on Alabama farms January 1, 1974, was placed at 32 percent above the previous record high set a year earlier. This reflects a \$50 increase in value per head and a larger inventory. The total value, at \$571.2 million, was an average of \$255 per head.

The Alabama calf crop was 5 percent larger in 1973 than 1972 with 1,033,000 calves born, also a record high.

Hog Numbers Down: All hogs and pigs on Alabama farms December 1, 1973, totaled 960,000, off 1 percent from the previous year. Alabama ranked 15th among the States in total hog numbers. The average value of hogs and pigs on farms jumped from \$38.00 per head on December 1, 1972, to a record high \$55.50 on December 1, 1973, bringing the total inventory value up to \$53.3 million, 45 percent above the previous record high set a year earlier.

Farrowings during 1973 totaled 187,000, down 16,000 from 1972. The average number of pigs per litter declined to 7.5, giving a pig crop of 1,402,000 for 1973, off 9 percent from the 1,541,000 pigs saved during 1972.

Sheep Inventory Off: Sheep numbers continued to decline on Alabama farms during 1973 and stood at a record low 4,600 on January 1, 1974. However, due to higher value per head, the inventory was valued at \$108,000, up \$10,000 from the previous year.

Milk Production Up: Alabama dairymen produced an estimated 830 million pounds of milk during 1973, up 10 million pounds from 1972. Production per cow, at 7,411 pounds, set a new record high while milk cow numbers declined to a record low of 112,000 for the 1973 average.

Red Meat Production Up: Alabama production of red meat (beef, veal, pork, and mutton) during 1973, at 186.5 million pounds, was 2 percent above the previous year. Mutton production was double that of 1972 while beef and veal were up 58 and 32 percent, respectively. Pork production was off 16 percent. Of the total 1973 production, pork represented 61 percent and beef 38 percent.

## Poultry Review, 1973

by Elizabeth A. Henderson

Poultry Remains Leading Agriculture Industry: Alabama poultry industry still has the highest cash receipts from farm marketings by Alabama producers in 1973 with over 36 percent. Broiler production remains the most important sector of the industry, with egg production in second place. Production of chickens, excluding broilers, is a minor segment and turkey production even less significant. The poultry industry in Alabama consists mainly of large integrated operations. The broiler industry is completely integrated and the greater part of the layers in flocks producing commercial eggs for table use belong to integrated operations.

Broiler Production Levels: Alabama broiler producers grew 399.3 million birds in 1973, only minutely above the previous year's total birds. There was an average of 1.5 million birds turned out each working day during 1973. The gross income for these broilers was estimated at 336.4 million dollars, an increase of 79 percent from 1972 gross income. The increase is due to the record high price producers received per pound on a liveweight at farm basis for broilers marketed. The 1973 price was 23.4 cents per pound whereas 1972 price was 13.1 cents. The lowest price on record was in 1967 when growers received only 12.0 cents per pound.

Egg Production Increases Slightly: The egg comes second within the poultry industry in Alabama. A total of 2,853 million eggs were produced in 1973. This is slightly over the 1972 production. This includes all eggs produced and used for hatching as well as those sold on the commercial markets both wholesale and retail. Alabama's laying flocks averaged 12,743 thousand birds during the year. The State's laying flock continued to become more concentrated in the hands of larger commercial operators. Commercialization of the industry has contributed much to the increased egg production.

Baby Chick Production Decreased: Alabama hatchery operators produced 451.1 million chicks in 1973, 3 percent less than 1972, which halted a continual increase since 1953. There were 438.3 million broiler-type chicks and 12.8 million egg-type chicks. In 1973 there were 53 hatcheries with a capacity of 45,104,000. The peak number of hatcheries was 96 in 1957.

Chicken Production (Excluding Broilers) Increased: Alabama poultrymen produced 12.2 million chickens (excluding broilers) in 1973, an increase of 16 percent from 1972. This phase of the poultry industry reflects largely the production of replacements pullets for laying flocks and production in small farm flocks.

Chickens (excluding commercial broilers): Number on farms by classes

Annual	3/9,605	3/9,809	4/233	4/229	2,240.5	2,245.3

1/ Average number on hand during month. 2/ December of previous year. Annual average is December thru November. 3/ Average number during year. 4/ Annual rate of lay per layer on hand (eggs produced during year divided by average number of layers during year). 5/ Other flocks consist of commercial (table) egg layers farm flocks (flocks with 400 layers or less) and egg-type breeder layers.

## Chickens: Commercial broilers, eggs, production, 1970-73

Item	Units	1970	1971	1972	1973
<u>All Chickens 1/</u>					
Production	Thou. birds	11,309	11,100	10,500	12,200
	Thou. lbs.	54,887	53,613	51,028	58,197
Sold 3/	Thou. lbs.	60,522	50,910	49,140	54,100
Avg. Price/Lb.	Cents	9.3	7.3	8.5	14.2
Value Home Consumption 4/	Thou. dol.	165	226	217	320
Cash Receipts	Thou. dol.	5,629	3,716	4,177	7,682
Gross Income	Thou. dol.	5,794	3,942	4,394	8,002
<u>Commercial Broilers</u>					
Production	Thou. birds	376,112	384,347	399,274	399,324
	Thou. lbs.	1,316,392	1,345,215	1,437,386	1,437,566
Price Per pound	Cents	12.2	12.6	13.1	23.4
Gross Income 5/	Thou. dol.	160,600	169,497	188,298	336,390
<u>Eggs</u>					
Produced	Millions	2,844	2,861	2,852	2,853
Consumed in Households	Millions	28	20	19	16
Sold	Millions	2,816	2,841	2,833	2,837
Price Per Dozen	Cents	44.2	36.4	34.1	53.1
Cash Receipts	Thou. dol.	103,723	86,177	80,504	125,537
Value Home Consumption 6/	Thou. dol.	1,031	607	540	708
Gross Income	Thou. dol.	104,754	86,784	81,044	126,245

1/ Data cover both farm and commercial operations but exclude broilers.

2/ Production is the quantity available for utilization during the year, i.e., sales plus home consumption, plus or minus change in inventory.

3/ Sold for slaughter.

4/ Valued at same price as chickens sold.

5/ Includes home consumption which is less than one percent of total production.

6/ Valued at same price as eggs sold.

## Turkeys: Production and gross income, 1970-73

Item	Unit	1970	1971	1972	1973
<u>Number raised 1/</u>					
Light breed	Number	11,000	10,000	14,000	24,000
Heavy breed	Number	12,000	13,000	14,000	5,000
Total	Number	23,000	23,000	28,000	29,000
Pounds produced 2/	Pounds	368,000	368,000	448,000	479,000
Price per pound 3/	Cents	22.3	21.6	22.0	31.2
Gross income 4/	Dollars	82,000	79,000	99,000	149,000

1/ Does not include young turkeys lost. 2/ Includes adjustments made for changes in inventory. 3/ Weighted average of monthly prices per pound received by farmers.

4/ Includes home consumption which is less than 1 percent of total production.

## Prices and Farm Labor Review, 1973

by Michael S. Guillory

Prices Received by Farmers

Prices received by Alabama farmers for 1973 production rose sharply to an all time record high. The Alabama All Commodity Index of Prices Received in 1973 averaged 428 percent of base (1910-14-100), compared to the 293 percent in 1972. This 46 percent increase is unprecedented with the second highest increase being 38 percent in 1916.

The Crops Index, one of the two components of the All Commodity Index, averaged 396 percent of base in 1973, 110 points (138 percent) more than the 1972 average. Irish potatoes averaged \$9.45 per cwt. in 1973, compared with \$2.96 received last year, a \$6.49 increase. Cotton averaged 43.9 cents per pound, up 16.0 cents from the previous year's average 27.9 cents. Soybeans, at \$5.50 per bushel, averaged \$1.80 higher than was received for the 1972 crop. Peanuts averaged 1.5 cents per pound above the 1972 price of 14.5 cents. Hay, at \$33.50 per ton, was up \$3.00 from the previous year's crop. Wheat averaged \$2.70 per bushel, exactly double last year's average \$1.35. The price of corn, at \$2.55 for the 1973 crop, was \$1.12 more than the previous crop.

The Livestock and Livestock Products Index, the other component of the All Commodity Index, was 442 percent of base or 146 points (149 percent) more than the 1972 average. August index of 597 percent of base was the largest increase of the annual average and marked the last continuous increase of preceding month. Beef cattle averaged \$41.60 per cwt., up \$9.60 from 1972. Calves, at an average \$52.50 for 1973, were \$8.40 per cwt. above the previous year.

Hogs, at \$37.10 per cwt., were up \$12.90 from 1972. The August price of \$55.90 marked the highest on record. Milk sold wholesale by farmers averaged \$8.42 per cwt. in 1973, up \$1.24 from a year earlier. Broiler prices, at 23.4 cents per pound in 1973, were up 10.3 cents per pound from 1972. Eggs, at 53.1 cents per dozen, were up 12.0 cents from 1972. August marked another record price of 70.3 cents since 1950's 70.4 cents per dozen received in December.

Prices Paid by Farmers

Although Alabama farmers received record prices in 1973, farmers paid record prices which represent part of the percent increase in farm production expenses. Alabama does not have an Index of Prices Paid by Farmers, therefore, direct comparisons between prices paid and those received cannot be made. However, a review of the most sharpening increases quickly emphasizes the deflating effect on those record prices received. Alabama farmers paid \$179.00 per ton for laying feed in August, \$91.00 more than August 1972. Soybean meal, 44 percent protein, sold for \$17.50 per cwt. in August, almost triple the \$6.40 price paid 12 months earlier. Farmers paid \$11.50 per cwt. for 41 percent cottonseed meal, \$6.30 more than the August 1972 price.

Farm Employment and Wage Rates

Agricultural technology continues to reduce the number of persons working on farms. October is the peak month for the number of farm workers which in 1973, with 122,000, is down from the 132,000 of 1972. The 1973 average, at 83,000, is up 1,000 from 1972 due to the increase in family workers from 65,000 to 66,000. Wage rates, on the other hand, continue to rise with the quarter beginning January 1, 1973, from the previous quarter. As with the number of farm workers, October 1 quarter marked the peak in wage rates.

## FARM INCOME REVIEW, 1973

by Marshall L. Dantzler

Cash receipts for farm marketings in Alabama totaled \$1.3 billion in 1973, compared with \$918 million a year earlier. Livestock and products, valued at \$902 million, accounted for 68.7 percent of the total while crops totaled \$412 million to make up the remaining 31.3 percent. Farm income for all commodities was 43 percent above a year earlier with livestock and products 45 percent higher and crops up 39 percent.

Alabama poultry and poultry products accounted for 36.4 percent of the State's receipts from farm marketings with cattle and calves, at 18.9 percent, ranking second. Hogs contributed 7.9 percent of the total and cotton 7.5 percent. Soybeans, dairy products and peanuts accounted for 7.3, 5.1 and 4.8 percent, respectively. These seven enterprises contributed almost nine-tenths of the total cash receipts from farm marketings in Alabama.

Receipts from the State's broilers, eggs, and farm chickens reached a record \$476.4 million in 1973. Also registering a large increase were returns from cattle and calves totaling \$248.6 million. Increased marketings and sharply higher prices than a year earlier accounted for these records. Receipts from cotton lint and seed, soybeans, and peanuts accounted for 63 percent of the total crop receipts. Combined returns for these crops were up 39 percent from 1972.

Realized gross farm income in Alabama approached \$1.5 billion to pass the previous year's record high of \$1.1 billion. In addition to cash receipts from farm marketings, realized gross farm income includes direct government payments, value of home consumption items, gross rental value of farm dwellings and other farm income. Government payments to Alabama farmers, at \$51.5 million in 1973, were down 24 percent from a year earlier.

Farm production expenses continued to rise in 1973. Compared with 1972, current operating expenses were up 31 percent and total production expenses 28 percent higher. Realized net farm income (gross income less total production expenses) rose 57 percent from the previous year. Realized net income per farm, at \$6,371, rose 57 percent from 1972.

The shift from a crop oriented farm economy to livestock and livestock products, starting in 1957, continued in 1973. For the year 1973, livestock and products gained about 1 percentage point in their contribution to cash receipts for all farm commodities produced in the State.

## Reports Issued by the Alabama Crop and Livestock Reporting Service

The Alabama Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers and various other special reports. Listed below are a few of the more important reports which may be obtained by writing to:

Agricultural Statistician  
P. O. Box 1071  
Montgomery, Alabama

Name of Report	Contents	Frequency of Report
Monthly Farm Facts	-Summary of current crop, livestock, poultry and price statistics	Monthly
General Crops and Crop Values	-Estimates of acreage, yield and production of major crops -Crop values	Monthly Annually
Weekly Crop and Weather	-Summary of crop condition, weather, etc.	Weekly
Grain Stocks	-Estimates of stocks of grains in all positions	Quarterly
County Estimates	-Wheat, corn, cotton, soybeans, peanuts, sorghum grain, hay, hogs, cattle, chickens, and cash receipts for selected commodities	Annually
Cattle	-Cattle inventory and calf crop	Semi-annual
Commercial Slaughter	-Production of red meat in commercial slaughter plants	Monthly
Hogs	-Hog inventory, pig crop, farrowings and farrowing intentions	Semi-annual
Weekly Broiler	-Eggs set and broilers placed weekly	Weekly
Poultry Report	-Commercial hatchery production, pullets placed for broiler hatchery supply flocks, layer numbers and egg production -Chicken inventory, chickens raised and special commercial poultry survey	Monthly Annually
Prices	-Prices received by farmers for farm products, prices paid for feed, including indexes and ratios	Monthly
Farm Income	-Cash receipts from farming, value of products consumed on farms and value of production for individual crops	Semi-annual
Statistical Bulletin	-Alabama Crop, Livestock, Price and Income Statistics	Annually

## WHY CROP AND LIVESTOCK REPORTS

- A man's judgment is no better than his facts and crop and livestock reports are the basic facts of Agriculture.
- They aid farmers in planning their production and marketing and provide them with an orderly market.
- They are the basis for analysis of agriculture and other business conditions.
- They enable railroads to make better distribution of cars for moving farm products.
- They give producers the same foresight to future price trends that organized dealers possess.
- They are a check on fluctuation in price by removing uncertainty of supply.
- They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.
- They aid farm organizations, schools and others in planning constructive programs.
- They give information on surplus and deficit areas of production making possible a more economical distribution of products.
- They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.
- They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.
- They indicate potential buying power enabling manufacturers to meet the probable demand.
- They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, business men, transportation agencies, crop and livestock interests, and governmental agencies.
