<u>REPORTS ISSUED</u>		88

The Commissioner Speaks

The Department of Agriculture and Industries is very proud of the great strides that have been made in Alabama agriculture in recent years. We are especially proud of the part this department has had in the orderly and healthy development of our agriculture and agri-business. We feel our agriculture is basically sound and our growth potential is unlimited.

The extensive growth we have experienced in recent years can be seen in the figures in this bulletin, which is one of a continuing series of the Alabama Agricultural Statistics Division. We were happy to cooperate with the United States Department of Agriculture in providing this important tool to our farmers, agricultural leaders and the agri-business community. With the rapid changes in agricultural needs and world wide demands in recent years, we have seen the importance of accurate agricultural data in determining the production of food and fiber. The information contained in this publication presents the current agricultural picture throughout the State of Alabama. Alabama producers and agri-business, thus, have updated information for planning their production and marketing programs.

This Bulletin is an illustration of the many ways we in the State Department of Agriculture and Industries cooperate with the United States Department of Agriculture and other agencies and organizations to avoid duplication of effort and to provide efficient and beneficial service to the agricultural and agri-business interest. This bulletin contains impartial information that is as accurate as our system can provide. We sincerely hope that it will be of value to everyone.

Sincerely yours,

McMillan Lane
McMillan Lane
Commissioner

FOREWORD

This publication, prepared by the Alabama Crop and Livestock Reporting Service, represents cooperative effort of the State Department of Agriculture and Industries and the Statistical Reporting Service of the U. S. Department of Agriculture. Funds and personnel from both organizations are utilized to better serve the needs of all interested in agriculture in the State.

This bulletin revises the series of data for 1973 and provides preliminary estimates for 1974 and the January 1, 1975, inventories of livestock. For the first time, county data are provided for pecans, peaches and the major vegetable crops. Also, included in this issue for the first time are county estimates of cash receipts from farm marketings.

Data presented in this bulletin are developed primarily from sample surveys. As agriculture becomes more specialized and concentrated on fewer farms, more scientific technology is required in designing the samples used in preparing reliable agricultural estimates. Hence, in recent years information received by mail from volunteer reporters has been supplemented by enumerative surveys based on area and list samples.

Multiple frame sampling (a combination of an independent land area sample and a sample drawn from a list of known producers) has recently been developed as the most efficient and effective of probability sampling techniques. In Alabama, we are using multiple frame sampling for estimating four of our major farm commodities.

Basic statistical information, such as that presented in this bulletin, is important to all who must make plans and decisions relative to agriculture. Producers need basic information in making production, marketing and storage plans. Other users of agricultural data include farm organizations and cooperatives; transportation agencies, processors and storage companies; manufacturers and suppliers of fertilizers, herbicides, pesticides, farm machinery and the host of other items required by producers; insurance companies; credit agencies; educational institutions; Chambers of Commerce; research workers; and personnel of local, state and federal governments.

Special recognition and thanks are given to all those who have made this bulletin possible by reporting to us voluntarily. We gratefully acknowledge the help of the many Alabama farmers, dealers, processors, hatcherymen, merchants and others who have assisted in providing basic information about the State's agriculture. We also wish to give special recognition to the Cooperative Extension Service and particularly to the County Extension Chairmen for their valuable assistance in making the county farm income series possible and the other county estimate series more reliable. We also express our appreciation to the F & W Publishing Corporation and the National Livestock and Meat Board who provided the color prints for the bulletin cover.

Sincerely,

Donald B. Jones
State Statistician

CROP REVIEW, 1974

by Jon. W. Moore

Rain and wet ground slowed land preparation in the early spring, but producers were able to finish tillage activities without difficulty. Crops generally emerged to even stands and made good growth during early stages of plant development. Rains were beneficial to most crops during the growing season. Cotton suffered from lack of hot, open weather and prospects were reduced. Harvest of crops was in full swing by November 1 and virtually completed by the end of the year.

Alabama farmers harvested their principal crops from 3.4 million acres, up 8 percent from 1973. A record-high soybean acreage of 1,020,000 acres was harvested. Increases in harvested acres were also shown for other crops except tall fescue seed and sweet corn. Crimson clover seed, tomato and watermelon acreages were unchanged.

The value of principal crops produced in Alabama during 1974 totaled \$637.1 million. This represents an increase of 38 percent over the \$462.9 million value in 1973. Production of soybeans, peanuts and hay topped 1973 and set new records. Wheat production was the second largest on record and the corn crop was the largest since 1967. Production increases were also recorded for all other crops except sorghum grain, crimson clover and tall fescue seed, sweet corn, watermelons and pecans.

Soybeans replaced cotton as Alabama's most valuable crop with a value of \$172.6 million, 50 percent above 1973. Other crops contributing substantial value are: cotton lint and seed, \$131.6 million, up 19 percent from 1973; corn, \$100.2 million, up 39 percent; peanuts, \$86.3 million, up 35 percent; hay, \$42.8 million, up 31 percent; and Irish potatoes, \$28.0 million, up 29 percent.

The combined value of production of fresh market vegetables, (snap beans, sweet corn, tomatoes and watermelons) totaled \$14,247,000, a decrease of 17 percent from the 1973 value. Of this total value, tomatoes account for 53 percent, watermelons 26 percent, sweet corn 15 percent, and snap beans 6 percent.

The value of Irish potato production climbed to \$27,957,000, 29 percent above 1973. Of this total, 63 percent came from the spring crop and 37 percent from the summer crop.

The 1974 peach production was valued at \$1,728,000, a 63 percent increase from 1973.

Pecans accounted for a \$5,500,000 crop in 1974, but was only about one-third as great as 1973.

Five leading crops: Acreage, yield, production and value, 1974

Crop	Unit	Acres harvested	Yield per harvested acre	Production	Value of production
		1,000 acres	Unit	1,000 units	1,000 dollars

1/ Vegetables are fresh market only

Livestock Review, 1974

By Jonathan L. Bauer

Alabama livestock producers received \$178.4 million from marketings of cattle and calves, hogs and pigs, and sheep and lambs during 1974, 48 percent less than the record \$345.6 million received for 1973 marketings. Lower prices for, and reduced marketings of, cattle and calves accounted for the majority of the decrease. The total value of cattle, hogs, and sheep in Alabama's end-of-year inventory, at \$363.0 million, was 42 percent below a year earlier. Cattle decreased in value by 43 percent, hogs by 27 percent, and sheep by 15 percent.

Cattle Numbers Continue to Rise: Alabama cattlemen held a record 2,700,000 cattle and calves on January 1, 1975, up 21 percent from inventory of a year earlier and 38 percent above the inventory of 5 years ago. Increases occurred in all classes except milk cows and heifers for milk cow replacement which were down 8 and 3 percent respectively. Beef cows at 1,238,000 were up 16 percent and heifers for beef cow replacement were up 22 percent from a year earlier. Alabama ranked 18th among the states in total cattle and 14th in beef cows. The value of cattle and calves on Alabama farms January 1, 1975, totaled \$324.0 million, an average of \$120 per head. Although inventory increased significantly value per head was enough below a year ago to result in a 43 percent decrease in total value.

The Alabama calf crop during 1974 at 1,140,000 was 10 percent larger than the previous record high calf crop produced in 1973.

Hog Numbers Down: All hogs and pigs on Alabama farms December 1, 1974, totaled 950,000, down 1 percent from the number on hand the previous year. Alabama ranked 14th among states in total hog numbers. The total value of Alabama's hog inventory was \$38,950,000, 27 percent below the \$53,280,000 total value of the 1973 inventory. Inventory was down slightly, but the majority of the large decrease resulted from a 26 percent decrease in value per head.

Farrowings during 1974 totaled 187,000, the same as in 1973. The average litter size increased to 7.6, giving a pig crop of 1,421,000 for 1974, 1 percent above the 1,402,000 pigs saved during 1973.

Sheep Inventory Continues Decline: There were 4,400 sheep on Alabama farms January 1, 1975, 200 head below the previous record low of 4,600 on hand January 1, 1974. Inventory was valued at \$92,000 down \$16,000 from a year earlier.

Milk Production Down: A total of 710 million pounds of milk was produced on Alabama farms during 1974, down 10 percent from 1973. The average number of milk cows on farms declined from 105,000 in 1973 to 95,000 in 1974, and average production per cow declined from 7,476 to 7,474 pounds.

Red Meat Production Up: Production of red meat (beef, veal, pork, and mutton) in Alabama during 1974 totaled 225.9 million pounds, up 21 percent from the 186.5 million pounds produced during 1973. Beef, veal and mutton showed marked increases of 45,384, and 80 percent respectively, while pork production was up only 2 percent. Of the total production, pork represented 52 percent and beef 46 percent.

Poultry Review, 1974

by Elizabeth H. Harwell

Poultry Continues to Lead Alabama's Agriculture Industry: As in the past recent years, Alabama's poultry industry has the highest total cash receipts from farm marketing by producers in 1974 with 36 percent or \$429.0 million. Broiler production consists of approximately 69 percent of the total poultry cash receipts with egg production running second with 30 percent. Production of chickens, excluding broilers, has only minor significance with turkey production having even less. The poultry industry in Alabama consists mainly of large intergrated operations. The broiler industry is completely intergrated and the greater part of the layers in flocks producing commercial eggs for table use belong to intergrated operations.

Alabama Ranks Fifth Among States: Alabama poultrymen in 1974 received \$429.0 million from sales of broilers, eggs, chickens and turkeys, 10 percent below the \$478.1 million received in 1973 but 55 percent above the \$276.6 million received in 1972. Alabama remains fifth behind Georgia, Arkansas, California, and North Carolina in cash receipts from the sales of poultry and poultry products.

Broiler Production Level Unchanged: Alabama broiler producers marketed 398.3 million birds in 1974, slightly less than the 399.3 million birds marketed both in 1973 and in 1972. Alabama cash receipts for broilers totaled \$295.2 million compared with \$340.9 million in 1973. The principle difference in value was the reduction of the average price per pound (liveweight at farm) from the 1973 record high price per pound of 23.4 cents to 20.0 cents per pound. Producers received \$190.5 million in 1972 when the price per pound averaged 13.1 cents. The lowest price on record was in 1967 when growers received an average of only 12.0 cents per pound.

Egg Production Increased: Alabama laying flocks produced 2,945 million eggs in 1974, three percent above production both in 1973 and in 1972. This includes all eggs produced and used for hatching as well as those sold on the commercial markets both wholesale and retail. Egg production accounted for \$129.0 million of the cash receipts. The average number of layers on hand during the year was 12.9 million birds compared with 12.7 million in 1973 and 12.5 million in 1972. The average production per layer during the year was 228 eggs. The State's laying flock continued to become more concentrated in the hands of larger commercial operators. Commercialization of the industry has contributed much to the increased egg production.

Baby Chick Production Decreases: Alabama hatchery operators produced 424.3 million baby chicks in 1974, six percent below the 451.1 million chicks hatched in 1973 and eight percent below the record high 462.7 million chicks hatched in 1972. Of the total chicks hatched in 1974, there were 10.4 million egg-type chicks and 413.9 million broiler-type chicks. On January 1, 1975, the State had 40 operating hatcheries with a total capacity of 44,127,000 eggs. The peak number of hatcheries was 96 in 1957.

Chicken Production (Excluding Broilers) Also Decreases: Alabama poultrymen produced 9.6 million chickens (excluding broilers) in 1974, down 21 percent from 1973. This phase of the poultry industry reflects largely the production of replacement pullets for laying flocks and production in small farm flocks.

Prices and Farm Labor Review, 1974

by Michael S. Guillory

Prices Received by Farmers

Prices received by Alabama farmers for 1974 crop production were up while prices of livestock and livestock products were down. The Alabama All Commodity Index of Prices Received in 1974 averaged 414 percent of base (1910-14-100), compared to the 428 percent in 1973. This is 3 percent below 1973 but is 41 percent above the 293 percent in 1972.

The Crops Index, one of the two components of the All Commodity Index, was at a record high 492 percent of base in 1974, 96 points (124 percent) more than the 1973 average. Irish potatoes averaged \$8.42 per cwt. in 1974, compared with \$9.34 received last year and \$2.96 in 1972. Cotton averaged 42.5 cents per pound, up 1.4 cents from the previous year's average of 27.9 cents. Soybeans, at \$7.05 per bushel, averaged \$1.55 higher than was received for the 1973 crop. Peanuts averaged 2.2 cents per pound above the 1973 price of 16.0 cents. Hay, at \$41.00 per ton, was up \$7.50 from the previous year's crop. Wheat averaged \$3.65 per bushel, up \$.95 from last year's average \$2.70. The price of corn, at \$3.35 for the 1974 crop, was \$.78 more than the previous crop.

The Livestock and Livestock Products Index, the other component of the All Commodity Index, was 373 percent of base or 69 points (16 percent) less than the 1973 average. Beef cattle averaged \$28.40 per cwt., down \$13.20 from 1973. Calves, at an average \$25.30 for 1974, were less than half the \$52.50 average for 1973.

Hogs, at \$34.20 per cwt., were down \$2.90 from 1973. Milk sold wholesale by farmers averaged \$10.05 per cwt. in 1974, up \$1.64 from a year earlier. Broiler prices, at 20.0 cents per pound in 1974, were down 3.4 cents per pound from 1973. Eggs, at 53.7 cents per dozen, were up .6 cents from 1973.

Prices Paid by Farmers

Although Alabama farmers received record crop prices in 1974, farmers paid record prices which represent part of the percent increase in farm production expenses. Alabama does not have an Index of Prices Paid by Farmers, therefore, direct comparisons between prices paid and those received cannot be made. However, a review of the most sharpening increases quickly emphasizes the deflating effect on those record prices received.

Alabama farmers paid an average of \$163.00 per ton for laying feed in 1974 compared with \$148.00 in 1973 and \$103.00 in 1972. Mixed dairy feed, 16 percent protein, sold for \$151.00 per ton in 1974, compared to \$134.00 in 1973 and \$92.00 in 1972. Farmers paid \$9.10 per cwt. for 14-18 percent hog feed compared to \$7.80 per cwt. in 1973 and \$5.30 in 1972.

Farm Employment and Wage Rates

Agricultural technology continues to reduce the number of persons working on farms. October is the peak month for the number of farm workers which in 1974, with 96,000, is down from the 122,000 of 1973. The 1974 average, at 77,000, is down 6,000 from 1973 due to the decrease in both family and hired workers. Wage rates on the other hand, continue to rise with each quarter. As with the number of farm worker, October 1 quarter marked the peak in wage rates.

1974 FARM INCOME REVIEW

by Marshall L. Dantzler

Cash receipts from farm marketings in Alabama totaled \$1.2 billion in 1974, compared with the record \$1.3 billion a year earlier. Livestock and products, valued at \$679 million, accounted for 57.1 percent of the total, while crops totaled \$511 million to make up the remaining 42.9 percent. Farm income for all commodities was 9 percent below a year earlier with livestock and products 24 percent lower and crops up 26 percent.

Alabama poultry and poultry products accounted for 36.0 percent of the State's receipts from farm marketings with soybeans at 12.6 percent ranking second. Cotton and cotton-seed contributed 8.7 percent of the total and hogs followed with 7.6 percent. Both peanuts and cattle and calves each had a 7.3 percent of the total, while dairy products receipts totaled 5.8 percent. Sales from these seven enterprises made up over 85 percent of the cash receipts from farm marketings in Alabama.

Receipts from the State's broilers, eggs and farm chickens totaled \$428.9 million in 1974, down \$49 million from the 1973 record of \$477.9 million. Soybean returns totaled a record \$149.3 million, nearly double the 1973 record of \$81.8 million. Soybeans as well as peanuts have been cash receipt record breakers every year for more than a decade. Cash receipts from marketings of wheat, corn, hay, sorghum grain, tobacco, vegetables and forest products also set new Alabama records in 1974. Receipts from cotton lint and seed, soybeans and peanuts accounted for 66 percent of the total crop receipts. Combined returns for these three crops were up 39 percent from 1973.

FARM INCOME CONCEPTS

Cash receipts from farm marketings represent gross income from the sales of crops, livestock and poultry during the calendar year. The value of home consumption of farm products, interfarm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed and marketed in another county.

Cash receipts from marketing of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price and changes in inventories. For field crops, such as corn, hay, cotton and soybeans, where the crop is harvested during one calendar year and portions are sold the next calendar year, cash receipts are not to be compared with crop year value of sales. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops where all or nearly all the production is harvested and marketed within a single calendar year, such as peanuts, the cash receipts are essentially the same as the value of production.

The annual cash receipts from farm marketings of livestock and poultry also refer to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, where commodities, such as broilers, are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

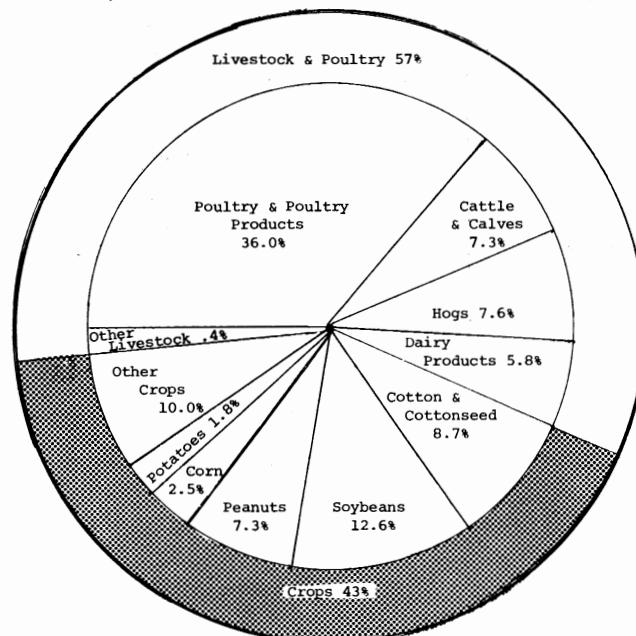

Cash receipts from farm marketings, by commodities, Alabama, 1972-1974

Reports Issued by the Alabama Crop and Livestock Reporting Service

The Alabama Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers and various other special reports. Listed below are a few of the more important reports which may be obtained by writing to:

Agricultural Statistician
P.O. Box 1071
Montgomery, Alabama 36102

- () 901 Monthly Farm Facts -- Summary of current crop, livestock, poultry and price statistics--monthly.
- () 100 General Crops and Crop Values -- Estimates of acreage, yield and production of major crops--monthly. Crop values--annually. (This same data is included in Monthly Farm Facts.)
- () 110 Weekly Crop and Weather -- Summary of crop conditions, weather, etc.--weekly.
- () 130 Grain Stocks -- Estimates of stocks of grains in all positions--quarterly.
- () 170 Seeds -- Estimates of acreage and production of crimson clover and tall fescue--periodically.
- () 199 Crop County Estimates -- Estimates by counties for corn, cotton, hay, peanuts, sorghum grain, soybeans and wheat--annually.
- () 212 Peaches -- Production, price and value--monthly during season.
- () 264 Pecans -- Production, price and value--monthly during season.
- () 301 Potatoes -- Acreage, yield and production--monthly during season.
- () 330 Commercial Vegetables -- Acreage and production of principal vegetable crops--periodically.
- () 400 Cattle -- Cattle inventory and calf crop--semi-annually.
- () 412 Sheep -- Sheep inventory, lamb crop and wool production--annually.
- () 420 Hogs -- Hog inventory, pig crop, farrowings and farrowing intentions--quarterly.
- () 470 Commercial Slaughter -- Production of red meat in commercial slaughter plants--monthly.
- () 461 Bees and Honey -- Number of colonies, honey production and value--annually.
- () 499 Livestock County Estimates -- Cattle and hog inventories--annually.
- () 500 Dairy and Manufactural Dairy Products -- Milk cows and milk production--monthly. Estimates of manufactured dairy products--annually.
- () 604 Weekly Broiler -- Eggs set and broilers placed--weekly.
- () 654 Poultry Report -- Commercial hatchery production, pullets placed for broiler hatchery supply flocks, layer numbers and egg production--monthly. Chicken inventory, chickens raised and special commercial poultry survey--annually.
- () 699 Poultry County Estimates -- Inventory--annually.
- () 700 Prices -- Prices received by farmers for farm products, prices paid for feed, price indexes and ratios--monthly. (This same data is included in Monthly Farm Facts.)
- () 701 Farm Income -- Cash receipts from farming, farm expenses, and value of products consumed on farms--semi-annually.
- () 799 Cash Receipts -- County estimates for all major crop and livestock items--Annual bulletin.
- () 900 Alabama Agricultural Statistics -- Annual bulletin.

WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts and crop and livestock reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing and provide them with an orderly market.

They are the basis for analysis of agriculture and other business conditions.

They enable railroads to make better distribution of cars for moving farm products.

They give producers the same foresight to future price trends that organized dealers possess.

They are a check on fluctuation in price by removing uncertainty of supply.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools and others in planning constructive programs.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.

They indicate potential buying power enabling manufacturers to meet the probable demand.

They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, business men, transportation agencies, crop and livestock interests, and governmental agencies.
