The Commissioner Speaks

As Commissioner of the Alabama Department of Agriculture and Industries, I am pleased to present the 1976 edition of "Alabama Agricultural Statistics." This bulletin comes to you through the combined effort of my department and the Statistical Reporting Service of the USDA. It is a comprehensive summary of current data with historical comparisons relating to the agricultural sector of Alabama's economy. Reliable basic data is essential to the efficient management of business. Farmers are no exception. They and others in agri-business need current and accurate information if they are to plan their production and marketing programs wisely.

This edition seems a little more special than the others in the series because it is being released during the nation's bicentennial celebration. Alabama has and will continue to play an important part in the growth of our nation because of its basically sound agricultural sector. As our nation enters its third century, let us all try to create a better understanding of the key role of the farmer in our economy. This bulletin is a step in that direction.

We in the department are especially proud of the part we have had in the orderly and healthy development of agriculture in Alabama over the years. We believe that there is still potential for expansion. This is important because the challenge of the future appears to be whether or not our nation can continue to be the breadbasket of the world as well as supplying our own needs.

This publication typifies the cooperative efforts between the Alabama Department of Agriculture and Industries and the United States Department of Agriculture. Through these cooperative efforts, we avoid duplication of effort while still providing assistance to Alabama's total agricultural community.

Sincerely,

A handwritten signature in cursive ink, appearing to read "McMillan Lane".

McMillan Lane
Commissioner

ALABAMA CROP and LIVESTOCK REPORTING SERVICE

FOREWORD

This bulletin is the eighteenth in a series that dates back to 1948. Over the years, these publications have ranked among the most popular of our releases based on user demand. It is by far the most complete accumulation of current statistical data available relating to agriculture in Alabama. In general, this issue contains the preliminary series of estimates for 1975 along with the comparable 1974 data which has been subject to revision. Also included are pertinent historical estimates on the state level for comparison purposes.

We are all celebrating our nation's bicentennial this year. As we pause and reflect on our heritage during the celebration, let's not overlook the part agriculture has played in Alabama and in the nation. The comparatively simple agricultural economy that characterized the United States during the first hundred years is a far cry from its modern counterpart. When the U. S. gained its independence, nine out of ten citizens were on farms. Today about four out of a hundred are on farms. The increased efficiency of the nation's farmers and ranchers led to this dramatic change which has had such a tremendous impact on our society. However, along with the many benefits, this shift has also created a problem which is the decline in understanding between the urban and rural sectors of our economy. Only a small portion of our population now have even an indirect tie back to agriculture so the lines of communication have been eroded. I hope that the data in this bulletin will help bridge this gap between farmer and consumer.

The estimates presented in this bulletin are developed primarily from sample surveys. In recent years, we have come to rely heavily on a program of probability sampling, enumerative surveys and objective yield measurements to support our old stand-by the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also tied closely to the degree of response. In Alabama, the response to our surveys has been gratifying. For this reason, I want to acknowledge the many Alabama farmers and agri-businessmen who assisted us in preparing our reports by providing basic data about the state's agriculture. Their reports have been supplemented by those from the County Extension Chairmen. The county income data in particular is the result of assistance given us by the Cooperative Extension Service.

I do want to express my appreciation to the staff of the Alabama Crop and Livestock Reporting Service for their devoted service--the results of which you will see here.

Sincerely,

Paul A. Walsh
Statistician in Charge

CROP REVIEW

1975

by Charles A. VanLahr, Jr.

The value of principal crops produced by Alabama farmers during 1975 totaled \$557.3 million, down 7 percent from the 1974 value of \$601.0 million. Lower prices for corn, soybeans, sorghum grain, cottonseed and wheat combined with decreases in cotton and potato production were largely responsible for the decline. Increases in production of most other crops helped limit the decline in crop values. Production of soybeans, hay and peanuts set new records. Wheat production was the second largest on record, the corn crop was the largest since 1967. Production increases were also recorded for sorghum grain, oats, tobacco, sweet corn, watermelons and pecans.

Soybeans remained Alabama's most valuable crop with a value of \$146.2 million, 11 percent below 1974. Other crops contributing substantial value were: peanuts, \$105.0 million, up 22 percent; corn for grain, \$96.2 million, down 4 percent; cotton lint and seed, \$90.1 million, down 32 percent; hay, \$47.1 million, up 11 percent; and Irish potatoes, \$22.9 million.

Alabama farmers harvested principal crops from 3.6 million acres, up 6 percent from the 3.4 million acres harvested in 1974. Largely responsible for the increase were more acres of soybeans, corn and hay.

Soybean acreage harvested for beans, increased sharply, surpassing the record acreage harvested a year earlier. Other crops with increased acreage harvested included sorghum, wheat, oats, peanuts and sweetpotatoes.

Heavy rains and wet grounds frequently delayed land preparation and planting of row crops during the spring months. By mid-June, however, planting of corn, cotton and peanuts was virtually complete. Planting of soybeans started in early May and made excellent progress. Generally, crops emerged to even stands and growth was good during early summer. Grass and weeds in row crops caused some concern during June as wet soils limited field work. Cotton conditions deteriorated during August as heavy rains continued but prospects for other crops remained favorable.

Hurricane Eloise brought heavy rains and high winds to much of Alabama during late September. Some damage was suffered by most crops but corn and pecans were hit hardest. Damage was greatest in the southeast quarter of the state. Harvest of corn and peanuts started early in September with the cotton and soybean harvest starting a few weeks later. Corn and peanut harvesting continued at a normal rate but harvesting of soybeans and cotton started slowly and remained well below rate of recent years. The usual rainfall during the summer months slowed maturity of much of the cotton crop and at mid-December, part of the acreage remained to be harvested.

Five leading crops: Acreage, yield, production and value, 1975

| Crop | Unit | Acres harvested | Yield per harvested acre | Production | Value of production |
|--------------------|------|-----------------|--------------------------|-------------|---------------------|
| | | 1,000 acres | Unit | 1,000 units | 1,000 dollars |
| Cotton lint | lb. | 370 | 405 | 1/312 | 80,122 |
| Cottonseed | ton | - | - | 115 | 10,005 |

LIVESTOCK REVIEW

1975

by Jonathan L. Bauer

Alabama livestock producers received \$251.5 million from marketings of cattle and calves, hogs and pigs, and sheep and lambs during 1975, 27 percent below the record \$345.6 million received for 1973 marketings, but 41 percent more than the \$178.4 million received during 1974. Increased cattle marketings and higher prices for hogs and pigs accounted for the increase over a year ago. The total value of cattle, hogs, and sheep in Alabama's end-of-year inventory, at \$416.6 million, was 33 percent below the record \$624.6 million established the end of 1973, but 15 percent above the \$363.0 million value of a year earlier. Cattle value increased 10 percent and value of hogs went up 55 percent.

Cattle Numbers Continue to Rise: Alabama cattlemen held a record 2,850,000 cattle and calves on January 1, 1976 up 6 percent from a year ago and 27 percent above 1974. Increases occurred in all classes except milk cows and heifers for milk cow replacements and most significantly heifers for beef cow replacement which were down 23 percent. Beef cows were up 6 percent. Alabama ranked 17th among states in total cattle and 12th in beef cows. The value of cattle and calves on Alabama farms on January 1, 1976, totaled \$356.3 million, an average of \$125 per head.

The Alabama calf crop during 1975, at 1,250,000 represents a record high, surpassing the previous record by 110,000 head.

Hog Numbers Down: All hogs and pigs on Alabama farms December 1, 1975, totaled 820,000, down 14 percent from a year earlier. Alabama ranked 15th among states in total hog numbers. The total value of Alabama's hog inventory was a record \$60.3 million 55 percent above last year's \$39.0 million and 13 percent above the previous record of \$53.3 million in 1973. Inventory was down, but value per head was up to \$73.50 compared to \$41.00 a year ago and \$55.50 two year's previous.

Farrowings during 1975 totaled 156,000 down 17 percent from the 187,000 farrowings during 1974 and 1973. The average litter size decreased to 7.4 giving a pig crop of 1,154,000 for 1975, 19 percent below the 1,421,000 pigs saved in 1974.

Sheep Inventory Continues Decline: There were 3,800 sheep on Alabama farms January 1, 1976, 600 below the 4,400 on hand January 1, 1975. Inventory was valued at \$86,000, down \$6,000 from a year earlier.

Milk Production Down: A total of 686 million pounds of milk was produced on Alabama farms during 1975, down 3 percent from 1974. The average number of milk cows on farms declined from 95,000 in 1974 to 91,000 in 1975. Average production per cow at 7,538 pounds was 85 pounds higher than in 1974.

Red Meat Production Up: Production of red meat (beef, veal, pork, and mutton) in Alabama during 1975 totaled 238.4 million pounds, up 6 percent from the 225.9 million pounds produced during 1974. Beef and veal production was up 34 and 122 percent respectively, but pork production was down 25 percent. Of the total production, beef and veal represented 63 percent and pork 37 percent.

POULTRY REVIEW

1975

by Elizabeth H. Harwell

Poultry Continues to Lead Alabama's Agriculture Industry: As in the past recent years Alabama's poultry industry has the highest total cash receipts from farm marketings by producers in 1975 with 37 percent or \$509.7 million from the state's total \$1,385 million. Broiler production consists of approximately 73 percent of the total poultry cash receipts with egg production second with 26 percent. Production of chickens, excluding broilers, has only minor significance with turkey production having even less. The poultry industry in Alabama consists mainly of large integrated operations. The broiler industry is completely integrated and the greater part of the layers in flocks producing commercial eggs for table use also belong to integrated operations.

Alabama Ranks Fifth Among States: Alabama poultrymen in 1975 received \$509.7 million from the sales of broilers, eggs, chickens and turkeys, a large increase of 20 percent over the \$425.8 million received in 1974, and seven percent over the \$478.1 million in 1973. Among other states, Alabama continues to rank in fifth place behind Georgia, Arkansas, California and North Carolina in cash receipts from the sales of poultry and poultry products.

Broiler Production Decreases Slightly: Alabama broiler producers marketed 395.8 million birds in 1975, one percent less than the 398.3 million marketed in 1974 and 399.3 in 1973. Alabama cash receipts for broilers totaled \$371.5 million compared with \$292.1 million in 1974. The difference in the total value was a result of the increase in the average price per pound (liveweight at farm) from 20.0 cents in 1974 to a record high 25.3 cents in 1975. Also, another factor which contributed to the increase was that producers are slaughtering heavier birds at 3.7 pounds than previous years. The lowest price on record was in 1967 when growers received an average of only 12.0 cents per pound.

Egg Production Increased only Slightly: Alabama laying flocks produced 2,951,000,000 eggs in 1975, only 6.0 million more than the 2,945,000,000 eggs produced in 1974. This includes all eggs produced and used for hatching eggs as well as those sold on the commercial markets both wholesale and retail. Egg production accounted for \$132.7 million of the cash receipts. The average number of layers on hand during the year was 12.5 million birds compared with 12.9 million in 1974 and 12.7 million in 1973. The average production per layer during the year was 235 eggs. The state's laying flock continued to become more concentrated in the hands of layer commercial operators. Commercialization of the industry has contributed much to the increased egg production.

Baby Chick Production Increases: In Alabama commercial hatcheries there were 432.4 million baby chicks hatched in 1975, two percent above the 424.3 million chicks hatched in 1974 but four percent below 1973. The record number of chicks hatched in the state was in 1972 with 462.7 million. Of the total chicks hatched during the year, there were 12.4 million egg-type chicks and 420.0 million broiler-type chicks on January 1, 1975.

Chicken Production (Excluding Broilers) Increased: Alabama poultrymen produced 12.4 million chickens (excluding broilers) in 1975, up 29 percent from 1974. This phase of the poultry industry reflects largely the production of replacement pullets for laying flocks and production in small farm flocks.

PRICES AND FARM LABOR REVIEW

1975

by Harry L. Wimbush

Prices Received by Farmers

The Alabama All Commodity Index of Prices Received in 1975 average 419 percent of base (1910-14-100), compared to the 414 percent in 1974. This was 1 percent above 1974 but dropped 2 percent from the 428 percent in 1973. Higher prices of livestock and live-stock products contributed most to the increase.

The Livestock and Livestock Products Index, one of the two components of the All Commodity Index, at 400 percent of base, rose 27 points (7 percent) over the 1974 average. Beef cattle average \$22.20 per cwt., down \$6.20 from 1974. The average price for calves was \$21.80 per cwt., \$3.50 less than 1974.

Hogs, at \$44.60 per cwt., jumped \$10.40 from 1974. Milk sold wholesale by farmers averaged \$10.40 per cwt. in 1975 up 35 cents from a year earlier. Broiler prices, at 25.3 cents per pound, was 5.3 cents per pound more than 1974. Eggs, at 53.8 cents per dozen, were up slightly from 1974.

The Crops Index, the other component of the All Commodity Index was 459 percent of base in 1975, down 33 points (7 percent) from the 1974 average. Irish potatoes averaged \$8.39 per cwt. in 1975, compared with \$8.38 last year and \$9.45 in 1973. Cotton averaged 53.5 cents per pound, 11 cents above the previous year's average of 42.5 cents. Soybeans, at \$4.65 per bushel, averaged nearly a half less than the \$7.05 received in 1974. The peanut price rose 1.4 cents per pound from the 18.2 cents per pound in 1974. Hay, at \$41.50, was up 50 cents from the previous year's crop. Wheat averaged \$2.95 per bushel, \$.70 less than 1974. The price of corn, at \$2.75, dropped 60 cents from a year earlier.

Prices Paid by Farmers

Alabama does not have an Index of Prices Paid by Farmers. Therefore, direct comparisons between prices paid and those received by Alabama farmers cannot be made. However, many of the cost of production items showed decreased from the sharp high prices a year earlier.

Alabama farmers paid an average of \$157.00 per ton for chick starter in 1975 compared with \$176.00 in 1974 and \$163.00 in 1973. Broiler grower sold for \$158.00 per ton in 1975, below the \$178.00 paid in 1974 and the \$165.00 in 1973. Farmers paid \$147.00 per ton for laying feed compared with \$163.00 in 1974 and \$148.00 in 1973. Soybean meal, 44 percent protein, sold for \$8.80 per cwt., down from the \$10.50 paid in 1974. Farmers paid an average of \$7.90 per cwt. for 14-18 percent hog feed compared with \$9.10 in 1974 and \$7.80 in 1973.

Farm Employment and Wage Rates

Beginning in 1973, Alabama labor statistics were derived from a probability farm labor survey conducted during the weeks that included January 12, April 12, July 12, and October 12 of each year. The data from this survey was supplied by individual farmers and employers of agricultural related firms who have farm laborers. During 1975, the annual average number of workers during the year at 91,000 had increased over the previous year's average by three percent. This was a change in the trend for a number of years which had been a steady decrease in both family workers and hired workers. July and October were the months of greatest activity. Wage rates increased significantly throughout the year but the greatest increase came each January, as a result of the increasing required minimum wage rate as set up in amended Fair Labor Standards Act of 1938. The wage for farm workers for all methods of pay converted to an hourly rate averaged \$2.51 in January, 1976, an increase of 24 cents over the previous year and 68 cents over January 1974.

1975 FARM INCOME REVIEW

1975

by Charles A. VanLahr

Cash receipts from farm marketings in Alabama totaled a record \$1.4 billion in 1975, compared with \$1.2 billion a year earlier. Livestock and products, valued at \$840 million, accounted for 60.6 percent of the total, while crops totaled \$545 million to make up the remaining 39.4 percent. Farm income for all commodities was 12 percent above a year earlier with livestock and products up 24 percent but crops were down 3 percent.

Alabama poultry and poultry products accounted for 36.8 percent of the state's receipts from farm marketings with soybeans at 10.5 percent ranking second. Cattle and calves contributed 10.0 percent of the total and hogs followed with 8.3 percent. Peanuts had 7.6 percent of the total, while cotton and cottonseed receipts totaled 7.0 percent. Dairy products receipts accounted for 5.0 percent of the total. Sales from these seven enterprises made up over 85 percent of the cash receipts from farm marketings in Alabama.

Receipts from the state's broilers, eggs and farm chickens totaled 509.7 million in 1975, up \$84 million from the 1974 total of \$425.8 million. Soybean returns totaled \$145.7 million, down 14 percent from the 1974 record of \$169.1 million. Cash receipts from marketings of corn, hay, sorghum grain, and vegetables set new Alabama records in 1975. Receipts from cotton lint and seed, soybeans and peanuts accounted for 64 percent of the total crop receipts. Combined returns for these three crops were down 6 percent from 1974.

FARM INCOME CONCEPTS

Cash receipts from farm marketings represent gross income from the sales of crops, livestock and poultry during the calendar year. The value of home consumption of farm products, interfarm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed and marketed in another county.

Cash receipts from marketing of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price and changes in inventories. For field crops, such as corn, hay, cotton and soybeans, where the crop is harvested during one calendar year and portions are sold the next calendar year, cash receipts are not be be compared with crop year value of sales. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops where all or nearly all the production is harvested and marketed within a single calendar year, such as peanuts, the cash receipts are essentially the same as the value of production.

The annual cash receipts from farm marketings of livestock and poultry also refer to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, where commodities, such as broilers, are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

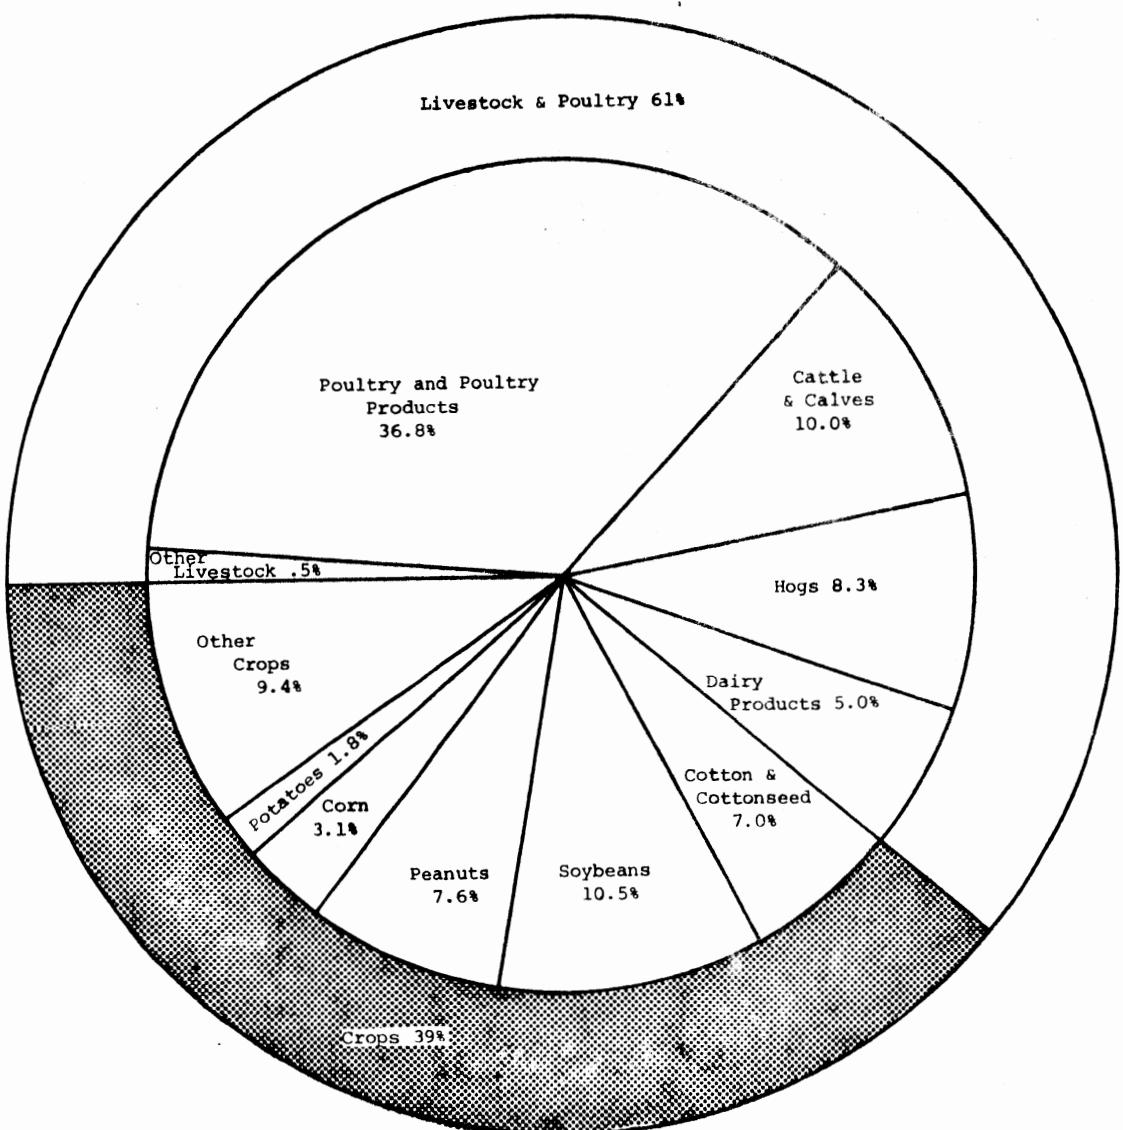

Cash receipts from farm marketings, by commodities, Alabama, 1973-1975

Reports Issued by the Alabama Crop and Livestock Reporting Service

The Alabama Crop and Livestock Reporting Service publishes official estimates of crop and livestock production, prices received and paid by farmers and various other special reports. Listed below are a few of the more important reports which may be obtained by writing to:

Agricultural Statistician
P. O. Box 1071
Montgomery, Alabama 36102

- () 100 General Crops and Crop Values -- Estimates of acreage, yield and production of major crops--monthly. Crop values--annually. Pecans and peaches--during season.
- () 110 Weekly Crop and Weather -- Summary of crop conditions, weather etc.--weekly.
- () 120 Cotton -- Acreage, yield and production by district--semi-annually.
- () 130 Grain Stocks -- Estimates of stocks of grain in all positions--quarterly.
- () 139 White Corn -- Acreage, yield and production--semi-annually.
- () 199 Crop County Estimates -- Estimates by counties for corn, cotton, hay, peanuts, sorghum grain, soybeans and wheat.
- () 301 Potatoes -- Acreage, yield and production--monthly during season.
- () 330 Commercial Vegetables -- Acreage and production--periodically.
- () 400 Cattle -- Cattle inventory and calf crop--semi-annually.
- () 412 Sheep -- Sheep inventory, lamb crop and wool production--annually.
- () 420 Hogs -- Hog inventory, pig crop, farrowings and farrowing intentions--semi-annually.
- () 461 Bees and Honey -- Honey and beeswax production and prices--annually.
- () 470 Commercial Slaughter -- Commercial production of red meat--monthly.
- () 499 Livestock County Estimates -- Cattle and hog inventories--annually.
- () 500 Dairy and Manufactured Dairy Products -- Milk cows and milk production--monthly Estimates of manufactured dairy products--annually.
- () 604 Weekly Broiler--Eggs set and broilers placed--weekly.
- () 654 Poultry Report -- Commercial hatchery production, pullets placed for broiler hatchery supply flocks, layer numbers and egg production--monthly. Chicken inventory, chickens raised and special commercial poultry survey--annually.
- () 699 Poultry County Estimates -- Inventory--annually.
- () 700 Prices -- Prices received by farmers, prices paid for feed, price indexes and ratios--monthly.
- () 701 Farm Income -- Cash receipts from farming, farm expenses and value of products consumed on farms--semi-annually.
- () 709 Farm Labor -- Number of workers and wage rates--quarterly.
- () 799 Cash Receipts County Estimates -- Crop and livestock marketings--Annual bulletin.
- () 900 Alabama Agricultural Statistics -- Annual bulletin.

WHY CROP AND LIVESTOCK REPORTS

A man's judgment is no better than his facts and crop and livestock reports are the basic facts of Agriculture.

They aid farmers in planning their production and marketing and provide them with an orderly market.

They are the basis for analysis of agriculture and other business conditions.

They enable railroads to make better distribution of cars for moving farm products.

They give producers the same foresight to future price trends that organized dealers possess.

They are a check on fluctuation in price by removing uncertainty of supply.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools and others in planning constructive programs.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.

They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.

They indicate potential buying power enabling manufacturers to meet the probable demand.

They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, business men, transportation agencies, crop and livestock interests, and governmental agencies.
