The Commissioner Speaks

It is a pleasure to present the 1979 edition of "Alabama Agricultural Statistics." On the following pages you will find a comprehensive record of the production and processing of agricultural products in our state. Agriculture is Alabama's leading industry. In 1978, cash receipts from farm marketings alone exceeded 1.9 billion dollars. However, the facts and figures in this publication are more than a measure of one segment of our economy. They are also a reflection of the skills, efforts made, and risks taken by the state's 75,000 farm operators and their employees in producing the food and fiber so essential to our well-being.

Users of this bulletin will readily see how agriculture has grown and developed over the years to meet current needs. I am proud of the part the Department of Agriculture and Industries has had in this orderly expansion. I believe that there is still potential for further expansion. This is important because the challenge of the future appears to be whether or not our nation can continue to be the breadbasket of the world while at the same time supplying our own needs.

This publication typifies the cooperative efforts between the Alabama Department of Agriculture and Industries and the United States Department of Agriculture. Through these cooperative efforts, we avoid duplication of effort while still providing assistance to Alabama's total agricultural community.

Sincerely,

A handwritten signature in dark ink that reads "McMillan Lane". The signature is written in a cursive, flowing style.

PAUL WALSH
State Statistician

FOREWORD

This bulletin is the twenty-first in a series that dates back to 1948. Over the years, these publications have ranked among the most popular of our releases based on user demand. It is by far the most complete accumulation of current statistical data available relating to agriculture in Alabama. In general, this issue contains the preliminary series of estimates for 1978 along with the comparable 1977 data which has been subject to revision. Also included are pertinent historical estimates on the state level for comparison purposes.

The estimates presented in this bulletin are developed primarily from sample surveys. In recent years, we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old standby, the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also tied closely to the degree of response. In Alabama, the response to our surveys has been gratifying. For this reason, I want to acknowledge the many Alabama farmers and agri-businessmen who assisted us in preparing our reports by providing basic data about the state's agriculture. Their reports have been supplemented by those from the County Extension Chairmen. The county income data in particular is the result of assistance given us by the Cooperative Extension Service.

I do want to express my appreciation to the staff of the Alabama Crop and Livestock Reporting Service for their devoted service--the results of which you will see here.

Sincerely,

A handwritten signature in cursive script that reads "Paul Walsh". The signature is written in dark ink and is positioned above the printed name.

Paul A. Walsh
Statistician in Charge

CROP REVIEW

1978

by Vaughn L. Siegenthaler

Principal crops produced by Alabama farmers in 1978 totaled \$706.7 million in value, up 30 percent from 1977's value of \$544.2 million. A record high soybean production coupled with a sharply higher corn production plus higher prices for most crops led to the upswing.

Soybeans were again the state's most valuable crop with a production value of \$287.4 million, 51 percent above 1977. The next four crops in order of total value were: peanuts, \$118.8 million, down 9 percent; cotton lint and seed, \$96 million, up 34 percent; corn for grain, \$62.6 million, nearly triple the 1977 value; and all hay, \$60.2 million, up 6 percent.

Farmers harvested their crops from 3.9 million acres, up 11 percent from 1977. Soybeans and corn showed marked increases in harvested acres, while cotton had the sharpest fall off in acreage--the lowest of record dating back to 1866.

Rains and wet grounds hampered land preparation through late March. Then weather opened up, giving farmers a chance to catch up. By mid-April, corn planting was progressing ahead of normal, while cotton and peanut planting was just getting started. Cooler than normal temperatures through May caused wheat to mature slowly and delayed germination of other crops. Corn, cotton, and peanut planting finished around June 1. Mid-June saw rains and warmer temperatures providing excellent growing conditions. Soybean planting was on schedule.

Wheat harvest finished in July, about 10 days behind schedule. An extended dry spell started in early July and by mid-month crops were showing adverse effects. Soybean planting was complete by July 17. At month's end, crop prospects had been reduced considerably. Dry weather continued through November, holding up planting of small grains and winter grazing crops. However, the open weather did allow crop harvest to progress rapidly. Peanut harvest was virtually complete by November 1 and corn finished up around Thanksgiving. Cotton, sorghum, and soybean harvests finished in early December, well ahead of their respective average completion dates.

Five leading crops: Acreage, yield, production and value, 1978

Crop	Unit	Acres harvested	Yield per harvested acre	Production	Value of production

LIVESTOCK REVIEW

1978

by Robert L. Jefferson

Record High Cash Receipts: Alabama livestock producers received a record \$501.5 million from marketings of cattle and calves and hogs and pigs during 1978. This was 53 percent above the \$327.1 million received for 1977 marketings and 27 percent above the previous record of \$395.7 million received in 1976. A sharp increase in prices received, primarily for cattle and calves, accounted for most of the increase. The total value of cattle and hogs in Alabama's end-of-year inventory, at \$528.4 million, was 51 percent above the \$349.6 million in 1977 and up 26 percent from the previous record \$420.0 in 1976. The value of cattle and calves increased 58 percent and the value of hogs increased 29 percent from the previous year.

Cattle Numbers Down 15 Percent: On January 1, 1979, Alabama cattlemen were holding 1,820,000 cattle and calves, down 15 percent from a year earlier and 23 percent below January 1 two years ago. Brood cows decreased from 1,100,000 January 1, 1978, to 985,000 January 1, 1979, a 10 percent decline. Heifers for brood cow replacement were down 14 percent. All other classes of cattle were also at a decline. The value of cattle and calves on Alabama farms at the beginning of the year, totaled \$546.0 million, an average of \$300 per head. Alabama ranked 22nd among states in total cattle and 16th in number of beef cows that have calved. Alabama's 1978 calf crop, at 950,000 was 70,000 below 1977 and 280,000 below the 1975 record high calf crop.

Hog Inventory Up 8 Percent: A total of 700,000 hogs and pigs were on Alabama farms December 1, 1978, up 8 percent from the same time a year earlier. Alabama ranked 18th among states in total hog numbers. Breeding stock was up 12 percent from the previous year and market hogs were up 7 percent from December 1, 1977. The value of hogs and pigs in Alabama totaled \$50.4 million, 46 percent above the December 1, 1977, value. The increase reflects primarily a \$19.00 increase in value per head.

Farrowings during 1978 totaled 170,000, an increase of 10 percent from the 154,000 in 1977. The average litter size decreased to 6.9, giving a pig crop of about 1,165,000 for 1978, compared with 1,076,000 in 1977.

Milk Production Down: Some 660 million pounds of milk were produced on Alabama farms during 1978, down 4 percent from the 684 million in 1977. The average number of milk cows on farms was 84,000 head, 1,000 below 1977. Production per cow decreased from 8,047 pounds in 1977 to 7,857 pounds in 1978.

Red Meat Production Down: Production of red meat (beef, veal, pork and mutton) in Alabama totaled 186.8 million pounds during 1978, a decrease of 20 percent from the 233.6 million pounds produced in 1977.

POULTRY REVIEW

1978

Barbara N. Sanford

Alabama's Poultry Industry Number One in Cash Receipts: Cash receipts from farm marketings of all poultry and poultry products in Alabama continued to maintain the largest share of the State's income. Sales of broilers, eggs, and chickens, at \$605 million, claimed over 31 percent of the total cash receipts. This is a jump of 16 percent from the previous year. Broiler production consisted of 68 percent of this total while egg production accounted for 31 percent. Production of chickens, excluding broilers, had only minor significance. A small percentage of the commercial table egg production is from independently owned flocks while the majority of production is controlled by large integrated operations. The broiler industry is totally regulated by these firms. Alabama ranks fifth behind Arkansas, Georgia, North Carolina, and California, respectively.

Broiler Production Sets Record: During 1978 in Alabama, a record high 441.7 million broilers were marketed. This was an increase of 3 percent from the 428.1 million produced in 1977 and also 3 percent above the previous record of 430.2 million in 1976. Gross income from broilers at \$409 million was up 17 percent from the 1977 total of \$348 million. The price received by the growers at 25.0 cents per pound (liveweight at farm) rose 3.0 cents from the 1977 price of 22.0 cents. The record high was 38.0 cents in 1946 and 1947 and the lowest record was set in 1967 when growers received an average of 12.0 cents.

Egg Production Establishes New Record: Alabama's laying flocks produced 3,329 million eggs in 1978, which is 146.0 million more than the previous record of 3,183 million eggs established in 1977. The eggs were either used for hatching eggs or sold in the commercial market, both wholesale and retail. The average number of layers on hand during 1978, at 13.8 million, compares with 13.4 million and 12.3 million, respectively in 1977 and 1976. The average number of eggs laid per hen was 241 during 1978. Egg production accounted for \$173.5 million in poultry cash receipts.

Chick Hatchery Production Up 8 Percent: Chicks hatched commercially in Alabama during 1978 numbered 517,591,000, exceeding last year's 479,282,000 chicks hatched. The 1978 hatch is 8 percent above the 1977 total. Broiler-type chicks hatched totaled 505,561,000, which accounted for 98 percent of the total hatch. Egg type hatch was 12,030,000 chicks.

Chicken Production (Excluding Broilers) Drops 1 Percent: During 1978, Alabama poultrymen produced 13.1 million chickens (excluding broilers), down 1 percent from the 1977 total of 13.2 million. This phase of the poultry industry reflects largely the production of replacement pullets for laying flocks and production in small farm flocks. Cash receipts from the sale of chickens were \$8.2 million, compared with \$7.3 million in 1977.

PRICES AND FARM LABOR REVIEW

1978

by Harry L. Wimbush

Prices Received by Farmers

The Alabama All Commodity Index of Prices Received averaged 504 percent of the 1910-14=100 base in 1978. The index increased 13 percent from 1977 and rose 14 percent from the 443 percent in 1976. Higher prices for livestock and its products contributed most to the increase.

The Livestock and Products Index, one of the components of the All Commodity Index, at 487 percent of base, was up 22 percent from the 1977 average. Beef cattle averaged \$43.20 per cwt., up \$14.80 from the 1977 price of \$28.40. The average price for calves was \$54.00 per cwt., \$21.90 higher than 1977. Hogs, at \$45.10 per cwt., jumped \$6.80 from 1977. Milk sold wholesale by farmers averaged \$11.60 per cwt. in 1978, an increase of \$.70 from the previous year. Broiler prices, at 25.0 cents per pound, were 3 cents higher than in 1977. Eggs, at 62.8 cents per dozen, were 2.2 cents above 1977.

The Crops Index, the other part of the All Commodity Index, was 538 percent of base in 1978, down 1 percent from the 1977 average. Potatoes averaged \$11.90 per cwt. in 1978, compared with \$9.30 a year earlier, and \$7.87 in 1976. Cotton averaged 60.5 cents per pound, 13.4 cents more than the previous year's average of 47.1 cents per pound. Soybeans, at \$6.70 per bushel, rose \$.95 from 1977. Peanuts, at 21.1 cents per pound, were down 1.1 cents from a year ago. Wheat averaged \$3.00 per bushel, \$.95 more than 1977. The price of corn, at \$2.30 per bushel, rose \$.20 from the previous year.

Prices Paid by Farmers

Alabama does not have an Index of Prices Paid by Farmers. Therefore, direct comparison between prices paid and those received by Alabama farmers cannot be made. However, the price of many production items increased from a year ago.

Farmers in the state paid an average of \$172.00 per ton for chick starter in 1978, compared with \$173.00 in 1977 and \$164.00 in 1976. Broiler grower sold for \$164.00 per ton in 1978, compared with \$153.00 in 1977 and \$162.00 in 1976. Farmers paid \$156.00 per ton for laying feed, compared with \$153.00 in 1977 and \$150.00 in 1976. Soybean meal, 44 percent protein, sold for \$11.50 per cwt., down from the \$12.50 paid in 1977. Farmers paid an average of \$8.40 per cwt. during 1978 for 14-18 percent protein hog feed, the same as the previous year.

Farm Employment and Wage Rates

Beginning in 1973, Alabama labor statistics were derived from a probability farm labor survey conducted during the week that includes the twelfth of January, April, July, and October of each year. The data from this survey was supplied by individual farmers and employers of agricultural related firms who had farm laborers.

During 1978, the annual average number of workers totaled 75,000, a decline of 13 percent from the previous year's average of 86,000. Family workers declined 12,000 to number 51,000 in 1978 while hired workers rose 1,000 workers to 24,000. The July and October quarters employed the largest work force. Wage rates have increased significantly throughout the years as a result of the increasing required minimum wage rate as set up in the amended Fair Labor Standards Act of 1938. The wage for farm workers for all methods of pay converted to an hourly rate averaged \$2.79 during 1978, in comparison with \$2.56 and \$2.45 in 1977 and 1976, respectively.

FARM INCOME REVIEW

1978

by Mickey B. Yost

Cash receipts from farm marketings in Alabama increased 23 percent in 1978 from last year's \$1.5 billion to \$1.9 billion, and up 17 percent over 1976's cash receipts of \$1.6 billion. Livestock and livestock products, valued at \$1,189 million, accounted for 63 percent of the total, while crops totaled \$706 million to make up the remaining 37 percent.

Alabama poultry and poultry products accounted for 31.8 percent of the state's total receipts from farm marketings, cattle and calves ranked second with 21.6 percent of the total receipts. Soybeans accounted for 13.8 percent of the total while peanuts were in fourth place with 6.6 percent of the total. Hogs were in fifth place accounting for only 4.9 percent of total. Cotton lint and cottonseed and dairy products took sixth and seventh places among the rankings with 4.6 percent and 4.0 percent respectively. Sales from these seven enterprises made up 87.3 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers, eggs, and farm chickens totaled \$603.4 million in 1978, up \$84.6 million from the 1977 total of \$518.8 million. Cattle and calf returns totaled \$409.4 million, up \$158.5 million from the previous year. Receipts from soybeans, peanuts and cotton lint and cottonseed accounted for 66.8 percent of the total crop receipts. Combined returns from these three crops were up 14.6 percent from 1977.

FARM INCOME CONCEPTS

Cash receipts from farm marketings represent gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, interfarm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed and marketed in another county.

Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. For field crops, such as corn, hay, cotton, and soybeans, where the crop is harvested during one calendar year and portions are sold the next calendar year, cash receipts are not to be compared with crop year value of sales. Calendar year cash receipts from such crops represent sales of parts of production from two or more crop years. For crops where all or nearly all the production is harvested and marketed within a single calendar year, such as peanuts, the cash receipts are essentially the same as the value of production.

The annual cash receipts from farm marketings of livestock and poultry also refer to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, where commodities, such as broilers, are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

WHY CROP AND LIVESTOCK REPORTS

- A man's judgment is no better than his facts and crop and livestock reports are the basic facts of agriculture.*
- They aid farmers in planning their production and marketing and provide them with an orderly market.*
- They are the basis for analysis of agriculture and other business conditions.*
- They enable railroads to make better distribution of cars for moving farm products.*
- They give producers the same foresight to future price trends that organized dealers possess.*
- They are a check on fluctuation in price by removing uncertainty of supply.*
- They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.*
- They aid farm organizations, schools, and others in planning constructive programs.*
- They give information on surplus and deficit areas of production making possible a more economical distribution of products.*
- They are a guide to farm resources and for developing new resources such as irrigation, electric power, location of food processing and other factories.*
- They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.*
- They indicate potential buying power enabling manufactures to meet the probable demand.*
- They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, businessmen, transportation agencies, crop and livestock interests, and governmental agencies.*
