The Commissioner Speaks

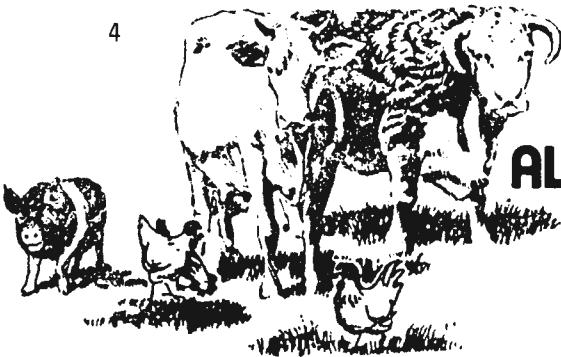

We are pleased to present the 1981 edition of "Alabama Agricultural Statistics." This bulletin contains a comprehensive record of the production and marketing of Alabama's agricultural products. Agriculture is Alabama's leading industry. In 1980, even with a severe drought, cash receipts from farm marketings exceeded 1.8 billion dollars. However, the facts and figures in this publication are more than a measure of one segment of our economy. This compilation of data reflects the skills, efforts, and risks taken by Alabama's farm operators and their employees in producing the food and fiber so essential to our well-being and that of our nation.

Users of this bulletin will readily see how agriculture has grown and developed over the years to meet current needs. I am proud of the part the Department of Agriculture and Industries has had in this orderly expansion. I believe that there is still potential for further growth. This is important because the challenge of the future continues to be whether or not our nation can be the breadbasket of the world and at the same time supply our own needs.

This publication typifies the cooperative efforts between the Alabama Department of Agriculture and Industries and the United States Department of Agriculture. Through this cooperation, we avoid duplication of effort while still providing service to Alabama's total agricultural community.

Sincerely,

McMillan Lane

DENNIS S. FINDLEY
State Statistician

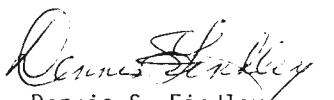

FOREWORD

This annual bulletin is twenty-third in a series dating back to 1948. This publication remains the most popular of our releases, based on subscriber requests. We have attempted to make these bulletins the most complete accumulation of current statistical data available relating to agriculture in Alabama. This issue contains the preliminary data series of state and county estimates for 1980 and comparable data for earlier years. Data for 1979 and earlier years has been revised in many instances and this published series should be used in lieu of any previously published data.

The estimates in this bulletin are developed primarily from sample surveys. In recent years we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old standby, the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also linked closely to the degree of response. In Alabama the response to our surveys has been gratifying. I want to say a special thanks to the many Alabama farmers and agri-businessmen who assisted us by providing basic data about this state's agriculture. You may be assured we have kept our pledge of confidentiality of reported data.

Individual reports from farmers have been supplemented by those from the Alabama Cooperative Extension Service. In particular, income data at the county level comes from their contributions.

I also express my sincere appreciation to the staff of the Alabama Crop and Livestock Reporting Service for their continued efforts to provide quality statistics for the state of Alabama.

Dennis S. Findley
Statistician in Charge

CROP REVIEW

1980

By Vaughn L. Siegenthaler

Record-breaking wheat production levels were nearly the only highlights of the 1980 crop year as the summer's hot, dry conditions seared most late season crops. Cotton yields were actually close to the historic average, but well below 1979 levels. Soybean yields were the lowest since 1954, while peanut yields were the lowest since 1966. Grain sorghum and oats production were up from 1979 primarily because of increased acres for harvest.

Wet conditions slowed land preparation progress through most of March. However, corn growers across the southern tier of counties began in late February on better drained soils. Mid-April saw some open weather which allowed cotton and peanut planting to start. Planting progress advanced favorably until mid-May. Soybean planting got under way by May 5. Wheat harvest started in late May.

Rain during the last two weeks of May brought soil moisture levels to surplus over most of Alabama by June 1. Corn, cotton, and peanut plantings were virtually complete by June 2. Wheat harvest lagged average progress. Conditions changed abruptly during the week ending June 8. Oven-like temperatures rapidly dried out the soil, leaving it too dry to plant soybeans while rapid progress was made on the wheat harvest.

By mid-June, soil moisture was very short and corn stands were showing severe heat stress. Scattered rain during the week ending June 22 brought some relief, but not enough. Most crops rated in poor condition. Wheat harvest progress jumped ahead of normal and finished around July 1, about a week ahead of average. Additional rain the last week of June enabled soybean planting progress to reach average levels. Soybean planting wrapped up on schedule around July 10.

The first half of July saw record-breaking temperatures taking a heavy toll of the corn crop. A return to cooler temperatures with some scattered showers during the latter half of July had crops other than corn recovering a little. August arrived with hot, dry weather, which continued until late September. By mid-August, soybeans were in poor condition; corn rated poor at best. Cotton and peanuts rated only fair. Corn harvest began in southern counties early in August and progressed rapidly, finishing around October 18, nearly a month ahead of normal. Peanut harvest started by September 7, cotton by September 14, and soybeans by September 21.

October brought cooler temperatures and generally favorable harvest conditions. Cotton and soybean harvests progressed ahead of normal. Peanut harvest caught up to normal by the last full week of October. Rainy weather during the week ending November 2, slowed the remaining harvest. The peanut harvest finished by November 16, about three weeks late. Cotton harvest was complete by December 1, about two weeks early. Soybean harvest finished around December 8.

Alabama farmers harvested their crops from 4.05 million acres in 1980, down 3 percent from 1979.

FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1980

C R O P	: UNIT :	ACRES HARVESTED	: YIELD PER HARVESTED ACRE	: PRODUCTION	: VALUE OF PRODUCTION
	:	1,000 acres	Unit	1,000 units	1,000 dollars
Cotton lint a/	: Lb.	321	411	275	105,468 b/

LIVESTOCK REVIEW

1980

By Barbara N. Sanford and Chris L. Cadwallader

Cash Receipts Decline 34 Percent: Alabama livestock producers received \$368.8 million from marketings of cattle, calves, hogs and pigs during 1980. This was a decline of 34 percent from the 1979 record of \$554.8 million. The number of cattle and calves marketed in 1980 declined 29 percent from 1979. Cattle prices received declined 12 percent as the prices received for calves was down 15 percent. Hog and pig marketings increased but the price declined 15 percent. The total value of cattle and hogs in Alabama's end-of-year inventory, at \$443.2 million, was 19 percent below the 1979 record of \$546.9 million. The gross income of cattle and calves declined 43 percent while the gross value of hogs and pigs increased 1 percent.

Cattle Numbers Increase 11 Percent: All cattle and calves on hand in Alabama on January 1, 1981, numbered 1,925,000 head. This is 11 percent above the number on farms last January and 6 percent above January 1, 1979. Total cows that have calved increased 10 percent, with beef cows up 12 percent and milk cows down 11 percent. All heifers 500 pounds and over were up 7 percent. Heifers for beef cow replacement and milk cow replacement increased 7 percent and 21 percent, respectively. Other heifers were unchanged. Bulls 500 pounds and over increased 5 percent; steers 500 pounds and over increased 4 percent; and calves less than 500 pounds increased 18 percent. The value of cattle and calves on Alabama farms at the beginning of the year totaled \$673.8 million, an average of \$350 per head. Alabama ranked 20th among states in total cattle and 15th in number of beef cows that have calved. Alabama's 1980 calf crop, at 880,000 head, increased 3 percent from a year ago.

Hog Inventory Down 9 Percent: Alabama pork producers had 9 percent fewer hogs and pigs on farms December 1, 1980, than a year earlier. The December 1 inventory, at 800,000 head, decreased 80,000 head from a year ago. Alabama ranked 18th among states in total hog numbers. Breeding stock was down 7 percent from a year earlier while inventory of market hogs declined 10 percent from December 1, 1979. The value of hogs and pigs in Alabama totaled \$49.2 million, 35 percent above the December 1, 1979, value. The sharp increase is attributable to value per head increasing from \$41.50 to \$61.50 in 1980.

Milk Production Declines 1 Percent: During 1980, 600 million pounds of milk were produced on Alabama farms, a decline of 1 percent from the 606 million in 1979. The average number of milk cows on farms was 68,000 head, 5,000 below 1979. Production per cow increased from 8,301 pounds in 1979 to 8,824 pounds in 1980.

Red Meat Production Up 18 Percent: Production of red meat (beef, veal, pork, and mutton) in Alabama totaled 258.9 million pounds during 1980. This was 18 percent above the 218.9 million pounds total in 1979. The number of cattle slaughtered at 204,000 head was 14 percent above 1979 and

POULTRY REVIEW

1980

By Chris L. Cadwallader

Alabama's Poultry Industry Ranked Number One in Cash Receipts: Cash receipts from farm marketings of all poultry and poultry products continued to maintain the largest share of the state's income. Sales of broilers, eggs, and chickens, at \$676 million, claimed nearly 37 percent of the total Alabama cash receipts. This is an increase of 4 percent from the 1979 total of \$648 million. Broiler production cash receipts comprised 72 percent of the total, while egg production accounted for 27 percent. Production of chickens, excluding broilers, had only minor significance. In 1980, Alabama ranked third nationally in the value of sale of chickens and broilers behind Arkansas and Georgia.

Broiler Industry Sets Production Record: Alabama broiler producers marketed a record 494.7 million birds in 1980, an increase of 1,649,000 from the previous record of 493.1 million established in 1979. Gross income from broilers, at \$488.8 million, was up 6 percent from the 1979 total of \$459.0 million. This was primarily attributable to the price per pound received by growers (liveweight at farm) increasing from 24.5 cents in 1979 to 26.0 cents in 1980.

Record Egg Production in 1980: Alabama layers produced 3,354 million eggs during 1980, up 54 million (2 percent) from 1979 production and 25 million (1 percent) above the previous record number in 1978. Eggs from all hatching flocks accounted for approximately one-fourth of the total egg production in 1980. The balance was comprised from commercial layer flocks and farm flocks of less than 400 layers. The average number of hens and pullets of laying age on hand in 1980 was 13.7 million, compared with 13.8 million in both 1979 and 1978. Twenty-six percent, or 3.6 million, of these chickens were in hatching flocks. The average number of eggs laid per hen was 244 during 1980, compared with 239 a year earlier and 241 in 1978. Egg production accounted for \$180.1 million in poultry cash receipts. Alabama ranked sixth nationally in production of eggs.

Chick Hatchery Production Up 6 Percent: Commercial hatcheries in Alabama hatched 600.8 million chicks in 1980. This record number surpasses last year's previous high of 568.9 million chicks. This production was 6 percent above a year ago and 16 percent above 1978. Broiler-type chicks hatched totaled 591,822,000 and accounted for 99 percent of the total hatch. Egg-type hatch was 8,992,000 chicks.

Chicken Production (excluding broilers) Decreases 14 Percent: During 1980, Alabama poultrymen produced 13.3 million chicks (excluding broilers), down 14 percent from the 1979 total of 15.4 million. This phase largely reflects the production of replacement pullets for laying flocks and production in small farm flocks. Cash receipts from the sale of chickens were \$7.3 million compared with \$9.2 million in 1979.

PRICES REVIEW

1980

By Robert L. Jefferson

Prices Received by Farmers

The All Commodity Index of Prices Received by Alabama Farmers averaged 565 percent of the 1910-14=100 base in 1980 compared with 559 in 1979. The index rose 1 percent from 1979 and was up 12 percent from the 504 in 1978. Higher prices for crops contributed most to the increase.

The Crops Index, one of the components of the All Commodity Index, was 619 percent of the base in 1980, up 8 percent from the 1979 average. Soybeans averaged \$7.60 per bushel, up \$1.50 from the 1979 price of \$6.10. Cotton averaged 79.9 cents per pound, 15.3 cents more than the previous year's average of 64.6 cents per pound. Potatoes, at \$7.70 per cwt., rose \$3.15 from a year ago. The peanut price, at 21.2 cents per pound, increased 0.7 cent from the 1979 average. The price of corn averaged 3.65 per bushel, up 70 cents from the previous year. Wheat, at \$3.80 per bushel, decreased 15 cents from a year earlier.

The Livestock and Products Index, the other part of the All Commodity Index, was 539 percent of the base in 1980, down 2 percent from the 1979 average. Beef cattle averaged \$55.30 per cwt., down \$7.60 from the 1979 price of \$62.90. The average price for calves was \$69.10 per cwt., \$12.20 below a year ago. Hogs, at \$37.00 per cwt., were down \$6.50 from 1979. Eggs, at 64.7 cents per dozen, were 1.0 cent below the previous year. Broiler prices, at 26.0 cents per pound, were 1.5 cents per pound above a year earlier. Milk sold wholesale by farmers averaged \$14.40 per cwt. in 1980, up \$1.10 from a year ago.

Prices Paid by Farmers

Alabama does not have an Index of Prices Paid by Farmers. Therefore, direct comparison between prices paid and those received by Alabama farmers cannot be made. However, the cost of production items increased from the previous year.

Farmers in the state paid an average of \$213.00 per ton for chick starter in 1980, compared with \$192.00 in 1979 and \$172.00 in 1978. Broiler grower sold for \$201.00 per ton in 1980, compared with \$187.00 in 1979 and \$164.00 in 1978.

Laying feed sold for \$193.00 per ton in 1980 compared with \$172.00 in 1979 and \$156.00 in 1978. Soybean meal, 44 percent protein, sold for \$13.50 per cwt., up 50 cents from the \$13.00 paid in 1979. Hog feed, 14-18 percent protein, sold for \$10.50 per cwt. during 1980, up \$1.10 from the \$9.40 in 1979.

FARM INCOME REVIEW

1980

By Vondie W. O'Conner, Jr.

Total cash farm income from farm marketings decreased 12 percent in 1980 from last year's \$2,130,474,000 to \$1,870,968,000. Decreases in cattle marketings (down 43.7 percent) accounted for much of the livestock drop (down 11.7 percent). The effect of the hot, dry 1980 summer resulted in fewer sales of crops (down 14.4 percent) with peanuts taking a tremendous drop (down 53.2 percent) and soybeans dipping significantly (down 27.7 percent). As expected, government payments were up sharply.

Alabama poultry and poultry products accounted for 35.7 percent of the state's total receipts from farm marketings, cattle and calves were second with 13.0 percent, soybeans were third with 12.7 percent, hogs were fourth with 6.7 percent, cotton was fifth with 6.3 percent, milk was sixth with 4.6 percent, and farm forest products were seventh with 4.4 percent of the total cash receipts from farm marketings. Sales from these seven items accounted for 83.4 percent of all cash receipts from farm marketings in Alabama in 1980.

Farm Income Concepts

Cash receipts from farm marketings represents gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county.

Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. However, cash receipts should not be compared to value of production for such crops as corn, hay, cotton, and soybeans because portions of these crops are sold the next calendar year. Calendar year cash receipts from such crops represents sales of parts of production from two or more crop years. For crops such as peanuts, cash receipts is essentially the same as the value of production since the crop is all or nearly all harvested and marketed within a single calendar year.

The annual cash receipts from farm marketings of livestock and poultry also refers to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These income data do not exactly represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, when commodities such as broilers are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

A man's judgment is no better than his facts and crop and livestock reports are the basic facts of agriculture.

They aid farmers in planning their production and marketing and provide them with an orderly market.

They are the basis for analysis of agriculture and other business conditions.

They enable railroads to make better distribution of cars for moving farm products.

They give producers the same foresight to future price trends that organized dealers possess.

They are a check on fluctuation in price by removing uncertainty of supply.

They are the best basis for adjusting supply to demand which is highly essential if maximum price is to prevail.

They aid farm organizations, schools, and others in planning constructive programs.

They give information on surplus and deficit areas of production making possible a more economical distribution of products.

They are a guide to farm resources and for developing new resources such as irrigation, electric power, and location of food processing and other factories.

They reduce uncertainty which limits speculation in farm products. Speculation adds to the cost of marketing.

They indicate potential buying power enabling manufacturers to meet the probable demand.

They provide an accurate, reliable, unbiased picture of Alabama's agriculture and furnish a sound basis for judgment and action by farmers, other individuals, businessmen, transportation agencies, crop and livestock interests, and governmental agencies.
