ALABAMA  
AGRICULTURAL  
STATISTICS

**Ag100**  
1883-1983  
100 Years of Service  
to Alabama Agriculture

**A Message  
from the  
Commissioner**

Every year this bulletin records the final results of the skills, efforts, and risks taken by Alabama's farmers and agribusinesses. This 1983 edition is testimony to their contributions to Alabama agriculture -- contributions which have made agriculture this State's leading industry.

The Department of Agriculture and Industries is proud of Alabama's steady agricultural growth. Cash receipts from farm marketings exceeded \$2.2 billion in 1982, an increase of 128 percent over ten years ago. This growth will continue, I am confident, because both the need for more food and fiber in the world and the talent in Alabama to help produce it are always with us.

Facts and figures in this bulletin come to us through the cooperative efforts of the Alabama Department of Agriculture and Industries and the U. S. Department of Agriculture. The accuracy of these estimates is closely linked to the excellent assistance of the many Alabama farmers and agribusinessmen who provide our organizations with the basic data of this State's agriculture. This cooperation, throughout Federal, State, and personal levels, gives me confidence that the agricultural community in Alabama receives current, accurate information without costly duplication of effort.

Sincerely,

A handwritten signature in cursive script that reads "Albert McDonald". The signature is written in dark ink and is positioned above the printed name.

Albert McDonald  
Commissioner

## FOREWORD

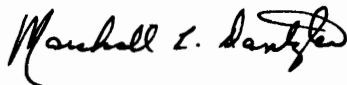

This is number twenty-five of a series of bulletins begun in 1948. This remains the most popular of our publications, based on subscriber requests. These bulletins are the most complete accumulation of statistical data available relating to agriculture in Alabama. This issue contains the preliminary data series of state and county estimates for 1982 and comparable data for earlier years.

These estimates are developed primarily from sample surveys. In recent years we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old standby, mail surveys. This was done to increase the precision of our estimates. Continued budget restrictions have eliminated a few more series of data.

A special thanks must be extended to the many Alabama farmers and agribusinessmen who provided basic data about this state's agriculture. The accuracy of our estimates is closely linked to the willingness to respond to our inquiries. We sincerely appreciate their continued cooperation. Be assured we have kept our pledge of confidentiality of reported data.

Reports from farmers have been supplemented by information from the Alabama Cooperative Extension Service. We rely heavily on their contributions for weekly crop weather and county level cash farm income estimates.

I also express my sincere appreciation to the staff of the Alabama Crop and Livestock Reporting Service for their continued efforts in data collection and analysis to provide quality information for the state of Alabama.

Marshall L. Dantzler  
Statistician in Charge

## ALABAMA'S RANK AMONG STATES: PRODUCTION OF CROPS AND LIVESTOCK, 1982

\*Revised.

1982

Barbara N. Sanford

Wheat and hay production set new record high levels in 1982, and hay yield was also a record high. Corn yields established a record, exceeding the previous high recorded in 1979. Cotton yields were the highest in history, surpassing the previous record set in 1971. Record yields were also set for peanuts, sorghum, and sweetpotatoes. Soybean production showed a moderate increase.

During February, rain caused soil moisture supplies to stay surplus throughout the month and halted field activities. Warm weather in March helped dry fields but fieldwork remained behind schedule. Cool, wet weather in April continued to hinder field activities. Corn, cotton, peanut, and sorghum plantings lagged behind the previous year and normal. Early May brought fair weather and allowed farmers to take advantage of the favorable conditions; however field progress remained behind normal. Soybean planting was under way by May 9.

The crop situation progressed to near normal toward the end of May after a slow start. Wheat harvest was underway while planting of cotton, corn, and peanuts was virtually complete. Soil moisture supplies remained adequate through mid-June, with crops in mostly good condition.

Wheat harvest advanced rapidly, as did soybeans and sorghum plantings throughout June. By the end of June, crop development was ahead of normal, but rain was beginning to be needed.

Scattered showers were received in early July which were beneficial to crop development and soil moisture supplies. Tomato and summer potato harvests had begun by mid-July. Excessive moisture had caused widespread insect and weed problems. South Alabama reported some corn for grain and silage harvest by month's end. Summer rain continued through mid-August. Soil moisture was rated adequate to surplus, with crops reported in good to excellent condition. Grain sorghum harvest was beginning in some areas. South Alabama counties reported peanuts dug. Early September brought above-normal temperatures and limited rainfall which allowed field activities to continue with little interruption.

Crop conditions were rated good with developmental stages ahead of normal. The first bale of cotton was ginned on September 1. September provided excellent weather for harvest, but rain was needed to aid development of late-planted beans. Peanut harvest was under way by mid-September. The end of September brought cool autumn weather with soil moisture supplies rated mostly short. Soybean harvest began around September 26. Dry conditions continued into early October with showers by mid-month bringing relief to the state. Corn, cotton, peanut, and soybean harvest progressed ahead of normal, with corn and peanut harvest virtually complete by October 17. Dry weather caused wheat seeding to fall behind normal. Ideal harvest conditions existed through early November, with crop harvest ahead of the previous year and average. Rain aided development of fall-seeded crops. Cotton and sorghum harvest advanced to near completion by mid-November. Wet weather followed and continued through year's end. Soybean harvest was virtually complete by mid-December.

Alabama farmers harvested their crops from 4.65 million acres, compared with 4.64 million in 1981.

FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1982

C R O P	UNIT	ACRES HARVESTED	YIELD PER HARVESTED ACRE	PRODUCTION	VALUE OF PRODUCTION
		1,000 Acres	Unit	1,000 Units	1,000 Dollars
Cotton lint <u>1/</u>	Lb.	285	775	460	<u>2/</u> 127,843
Hay	Ton	650	1.90	1,235	74,100
Peanuts for nuts	Lb.	177	2,950	522,150	128,971
Soybeans for beans	Bu.	2,050	26	53,300	285,155
Winter wheat	Bu.	825	32	26,400	80,520

1/ Production in 480-pound net weight bales. 2/ Cottonseed would add \$10,640,000 to the value of production from the cotton crop.

## LIVESTOCK REVIEW

1982

Vaughn L. Siegenthaler

Cattle Numbers Decline 2 Percent: All cattle and calves in Alabama as of January 1, 1983, totaled 1,910,000 head. This is a 2 percent drop from the January 1, 1982, inventory. All inventory classes were down from a year earlier except steers, and other heifers 500 pounds or heavier. All cows that have calved, at 990,000 head, were also down 2 percent. Beef cows decreased 15,000 head while milk cows were off 5,000 head. Heifers for beef cow replacement were down 11 percent, while milk cow replacements declined 1,000 head. Other heifers were up 1,000 head from a year ago. Steers 500 pounds and over jumped up 17 percent, but calves under 500 pounds dropped off 3 percent. The 1982 calf crop was placed at 900,000 head, up 3 percent from 1981. Alabama ranked 21st among states in all cattle, but 14th in the number of beef cows on farms.

Hog Inventory at Record Low: The number of hogs on Alabama farms as of December 1, 1982, was placed at 480,000 head. This was 11 percent below the December 1, 1981, inventory and the lowest inventory on record dating back to 1867. Breeding stock slipped to 78,000 head, off 11 percent. Market hogs fell to 402,000 head, down 12 percent. The 1982 pig crop totaled just 784,000 head, a 22 percent plunge from 1981. Despite the drop in level, Alabama held its number 20 rank among states in total hog numbers.

Milk Production Lower: Alabama's dairymen produced an estimated 580 million pounds of milk during 1982, down 6 percent from 1981's revised total of 620 million pounds. The annual average number of cows milked was 59,000 head, 3,000 fewer than in 1981. Production per cow averaged 9,831 pounds for 1982.

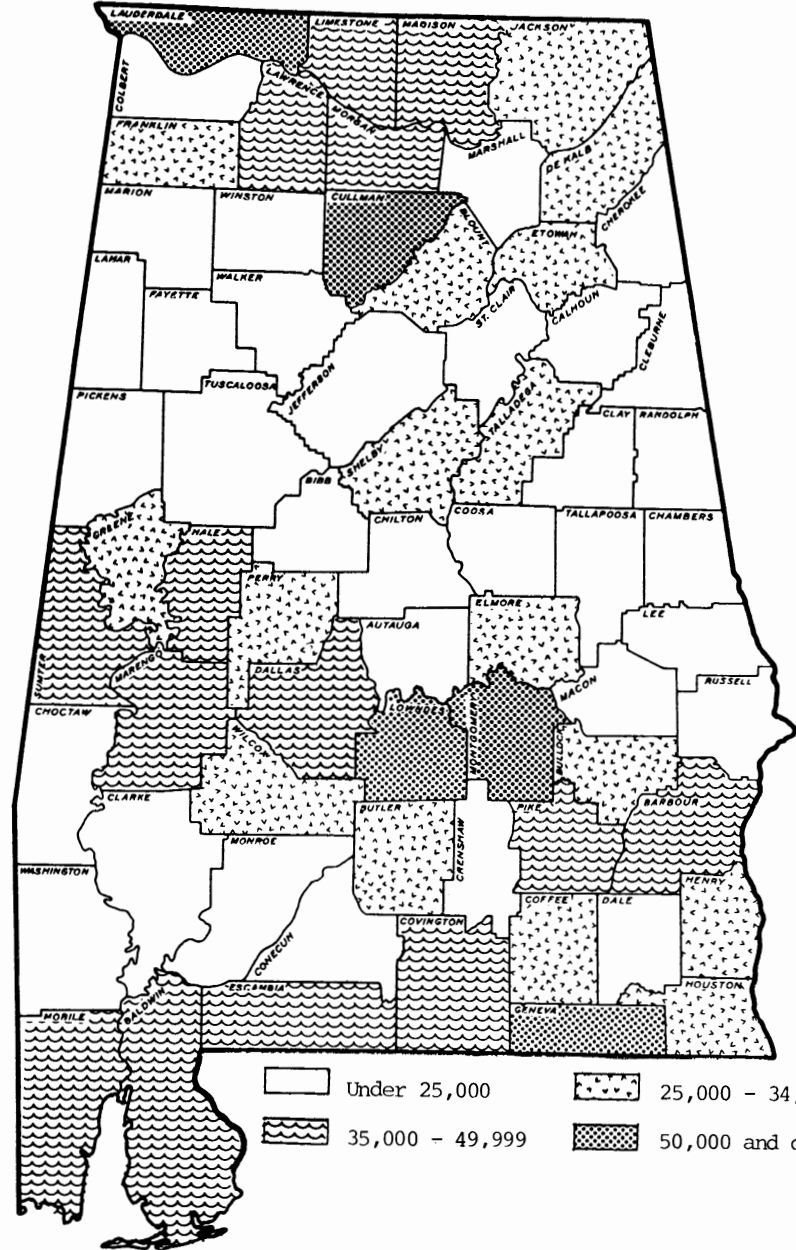

Red Meat Production: The 1982 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 237.3 million pounds (dressed weight). This was 13 percent less than the 1981 level. Cattle slaughter totaled 215,700 head, down 4 percent from 1981. Calf kill stood at 5,100 head, 200 head less than the previous year. Hogs butchered dropped down to 549,700 head, 28 percent below 1981.

## POULTRY REVIEW

1982

James G. Hand

Broiler Production Down 4 Percent: Alabama broiler producers marketed 500.2 million birds in the 1982 marketing year, a decrease of 19.1 million from the record 519.3 million marketed in 1981. Alabama remains the third largest broiler-producing state in the U. S.

Egg Production Down 7 Percent: During 1982, Alabama's laying flocks produced 2,879 million eggs, down 216 million from the previous year. The average number of hens and pullets of laying age on hand in 1982 was 12.1 million, compared with 12.9 million in 1981. The average number of eggs laid per hen was 239 during 1982, compared with 241 a year earlier. Alabama ranked ninth nationally in production of eggs.

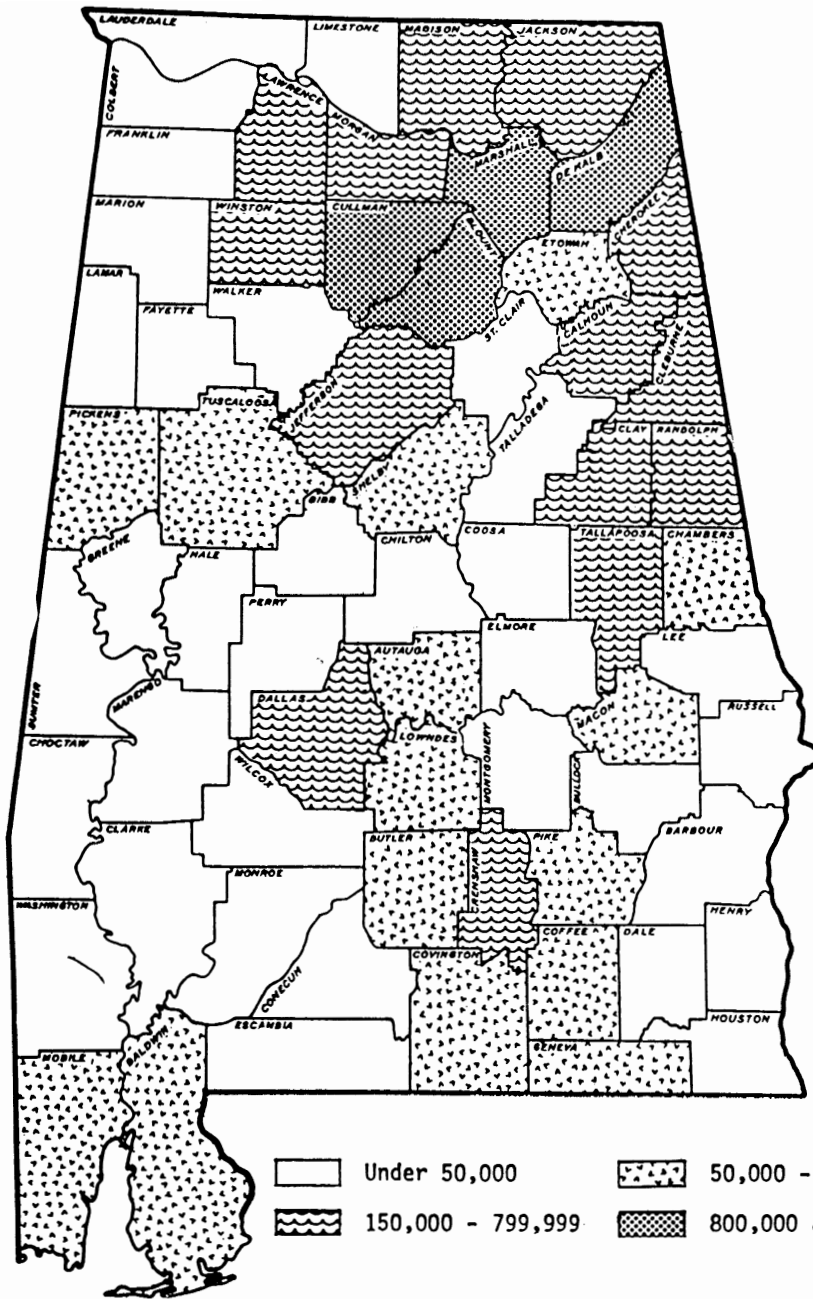

Hatchery Production Up 1 Percent: Commercial hatcheries in Alabama hatched a record 628.5 million chicks in 1982. This surpassed last year's previous high of 620.4 million. Egg-type chicks hatched was 10.4 million, compared with 8.9 million in 1981. Broiler-type chicks hatched totaled 618.1 million and accounted for 98 percent of the total hatch. There were 12.7 million broiler-type chicks shipped into Alabama during 1982. Alabama hatcheries shipped 76.1 million broiler-type chicks into other states. The total number of broiler-type chicks placed in the state during 1982 was 520 million.

Chicken Production (excluding broilers) Decreases 3 Percent: Alabama poultrymen produced 12.5 million chicks (excluding broilers), down 3 percent from the 1981 total of 13.2 million. This phase of the poultry industry largely reflects the production of replacement pullets for laying flocks and production in small farm flocks.

## PRICES REVIEW

1982

Robert L. Jefferson

Prices Received by Farmers: The All Commodity Index of Prices Received by Alabama Farmers averaged 517 percent of the 1910-14=100 base in 1982, compared with 552 in 1981. This was a decrease of 6 percent from 1981 and 8 percent below 1980. Contributing most to the decrease were lower livestock prices for cattle, calves, broilers, and eggs and lower crop prices for soybeans.

The Livestock and Products Index, one of the components of the All Commodity Index, was 504 percent of the base in 1982, down 3 percent from the 1981 average. Beef cattle averaged \$46.30 per cwt., down \$1.50 from the 1981 price of \$47.80. The average price of calves was \$55.00 per cwt., \$3.30 below a year ago. Broilers, at 25.0 cents per pound, were 1.5 cents below a year ago. Egg prices, at 56.4 cents per dozen, were 16.7 cents below the previous year. Milk sold wholesale by farmers averaged \$14.60 per cwt. in 1982, down 10.0 cents from a year earlier. Hogs, at \$52.90 per cwt., rose \$9.90 from 1981.

The Crops Index, the other component of the All Commodity Index, was 544 percent of the base in 1982, down 12 percent from the 1981 average. Soybeans averaged \$5.30 per bushel, down 78.0 cents from the 1981 price of \$6.08. The price of corn averaged \$2.55 per bushel, down 15.0 cents from a year ago. Wheat, at \$3.00 per bushel, decreased 30.0 cents from a year earlier. Potatoes, at \$8.80 per cwt., dropped \$2.20 from the previous year. Peanuts averaged 24.7 cents per pound, 0.7 cent less than the previous year's average of 25.4 cents per pound. The price of cotton, at 57.9 cents per pound, increased 2.0 cents from the 1981 average.

Prices Paid by Farmers: Alabama does not have an Index of Prices Paid by Farmers. Therefore direct comparison between prices paid and those received by Alabama Farmers cannot be made. However, the cost of production items decreased from the previous year.

Farmers in the state paid an average of \$207.00 per ton for chick starter in 1982, compared with \$227.00 in 1981 and \$213.00 in 1980. Broiler grower sold for \$216.00 per ton in 1982, compared with \$232.00 per ton in 1981 and \$201.00 in 1980.

Laying feed sold for \$192.00 per ton in 1982, compared with \$217.00 in 1981 and \$193.00 in 1980. Soybean meal, 44 percent protein, at \$13.50 per cwt., decreased \$1.50 from the \$15.00 paid in 1981. Hog feed, 14-18 percent protein, sold for \$10.50 per cwt. during 1982, down \$1.00 from the \$11.50 in 1981.

1982

Joyce B. McIntyre

Cash Farm Income: Total cash farm income from farm marketings for 1982 decreased .2 percent from \$2,222,848,000 in 1981 to \$2,218,085,000. Livestock and livestock products, valued at \$1,213.6 million, accounted for 55 percent of the total, while crops totaled \$1,004.4 million to make up the remaining 45 percent.

Alabama poultry and poultry products accounted for 30.3 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 15.8 percent of the total receipts. Soybeans accounted for 14.6 percent of the total, while cotton lint and cottonseed receipts totaled 6.3 percent. Peanut receipts accounted for 5.6 percent of the total followed by hogs with 4.4 percent and greenhouse and nursery with 3.9 percent. Sales from these seven enterprises made up 80.9 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers, eggs, and farm chickens totaled \$672.0 million in 1982, down \$46.0 million from the 1981 total of \$718.1 million. Cattle and calf returns totaled \$351.1 million, up 8.8 percent from the 1981 total of \$322.8 million. Receipts from soybeans, cotton lint and seed, and peanuts accounted for 58.4 percent of the total crop receipts. Combined returns from these three crops were up 9.5 percent from 1981.

Farm Income Concepts: Cash receipts from farm marketings represents gross income from the sales of crops, livestock, and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included as cash receipts. Production expenses such as feed, fuel, fertilizer, and marketing costs are not dealt with when referring to gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the production is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county.

Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. However, cash receipts should not be compared to value of production for such crops as corn, hay, cotton, and soybeans because portions of these crops are sold the next calendar year. Calendar year cash receipts from such crops represents sales of parts of production from two or more crop years. For crops such as peanuts, cash receipts is essentially the same as the value of production since the crop is all or nearly all harvested and marketed within a single calendar year.

The annual cash receipts from farm marketings of livestock and poultry also refers to the calendar year. Receipts include the sales value of an animal only once, usually the calf at the time it is sold for slaughter or final disposition. These receipts do not represent the summation of all income received from livestock and poultry producers in a given county. For example, feeder pigs or cattle sold from one farm to another within a county are included only upon final disposition. Also, when commodities such as broilers are produced under contract, the grower may directly receive only a contract payment. However, these data include the full value at the farm level of the broilers sold.

Cash Receipts Tables: In the following county tables, "Other Crops" includes cash receipts from all vegetables, other fruits, sorghum, oats, and other minor commodities. Greenhouse and nursery, peaches, pecans and peanuts are included under "Greenhouse, Peaches, and Nuts."
