Albert McDonald, Commissioner  
Cecil G. Davis, Assistant Commissioner

**A Message  
from the  
Commissioner**

Because of the tremendously wide range of factors that influence crop and livestock production, the business of agriculture requires a complex series of risks and the use of statistics to calculate those risks.

To plan their planting, feeding, breeding and marketing programs, producers need detailed information on several items, including production and prospects for commodities, prices and weather. Data is needed by agribusinessmen and trade and financial organizations to determine inputs, resources, transportation and storage of agricultural products. These statistics are also of immediate policy-making relevance to those responsible for creating government programs that further affect the actions taken by those in agriculture throughout this country and the world.

Since every decision that is made and every risk that is taken in the agricultural industry affects the availability, quality and price of food and fiber, it is vital to everyone that the surveys taken to determine the statistics behind these far-reaching actions be accurate. This requires both skill on the part of those taking the surveys and the cooperation of those providing the information.

I commend the Alabama Agricultural Statistics Service, a cooperative effort of the U.S. Department of Agriculture and the Alabama Department of Agriculture and Industries, for their excellent work in designing, analyzing and reporting Alabama's agricultural statistics surveys. I also commend all the farmers and agribusinessmen who take the time to provide the information that is so important to their work which is so important to us all.

A handwritten signature in black ink that reads "Albert McDonald". The signature is written in a cursive, flowing style.

Albert McDonald  
Commissioner

ALBERT McDONALD  
Commissioner of Agriculture

## FOREWORD

This annual bulletin is twenty-eight in a series dating back to 1948. This publication remains the most popular of our releases, based on subscriber requests. We have attempted to make these bulletins the most complete accumulation of current statistical data available relating to agriculture in Alabama. This issue contains the preliminary data series of state and county estimates for 1985 and comparable data for 1984. Data for 1984 and earlier years has been revised in many instances and this published series should be used in lieu of any previously published data.

Several major changes appear in this annual bulletin. On July 1 of 1986 our name was changed to the Alabama Agricultural Statistics Service in an effort to more accurately reflect our agency's purpose and its broad agricultural focus. Another major change for this publication is the regrouping of our counties from ten Crop Reporting Districts to six Agricultural Reporting Districts. This was done to group counties having relatively similar agricultural characteristics and more adequately reflect the makeup of today's agriculture in Alabama. We did it in this publication for the first time and solicit your comments on this new grouping of counties. If we receive favorable comments, we plan to continue using the new grouping in subsequent years.

The estimates in this bulletin are developed primarily from sample surveys. In recent years we have come to rely heavily on a program of probability sampling, enumerative surveys, and objective yield measurements to support our old standby, the mail survey system. This was done to increase the precision of our estimates. The accuracy of our estimates is also linked closely to the degree of response. In Alabama the response to our surveys has been gratifying. I want to say a special thanks to the many Alabama farmers and agribusinessmen who assisted us by providing basic data about this state's agriculture. You may be assured we have kept our pledge of confidentiality of reported data.

Individual reports from farmers have been supplemented by those from the Alabama Cooperative Extension Service. In particular, income data at the county level comes from their contributions. Also, a special thanks goes to the Soil Conservation Service for providing the cover photography.

I also express my sincere appreciation to the staff of the Alabama Agricultural Statistics Service for their continued efforts to provide quality statistics for the State of Alabama.

Sincerely,

Marshall L. Dantzler  
State Statistician

## CROPS REVIEW

1985

Clayton J. McDuffie

Acres harvested for cotton, sorghum, and wheat showed an increase from 1984, while soybeans, peanuts, and corn acreages declined from the previous year. Alabama farmers harvested their crops from 3.30 million acres, compared with 3.62 in 1984.

Land preparation and some plantings were delayed due to wet and cold conditions during February. Weather conditions during March and April were more near normal. By the end of April most of the state's corn crop had been planted, which was well above the average planted by this time. Good planting conditions during the spring also allowed cotton, peanuts, and sorghum plantings to be well ahead of schedule. May's weather was also favorable for continued plantings and for promoting growth of emerged crops.

Peanut plantings were virtually complete by late May, while about half the soybean crop and two-thirds of the sorghum crop were in the ground. Harvesting of the state's freeze damaged peach crop started about mid-May. Weather conditions during June were also good for crop development, as most of the state's crops were in fair to mostly good condition. By the end of June most of the soybeans and sorghum had been planted. Harvest of the wheat crop had been completed by the end of the month.

Ideal growing conditions continued into July, as row crops experienced very little stress during the growing season. Temperatures were near normal and rainfall above normal for the month. Crop conditions were considered mostly good during July. Harvesting of the state's corn crop began in late July, as Alabama corn growers were harvesting what was to be record yields. Excellent growing conditions continued into August. Crop conditions remained in mostly good condition, resulting in normal crop development. Farmers began harvesting sorghum in early August. Hay production in 1985 reached a record level as yields topped last year's record. The first of the state's peanut crop was being dug by late August.

Normal weather conditions again prevailed during September, as farmers began land preparation for fall plantings. Cotton and soybean harvest began in late September. Harvesting progressed well ahead of normal for corn, sorghum, and peanuts. Moisture supplies for October were mostly adequate, but temperatures were well above normal. Small grain acreage seeded was behind normal. The record corn crop and the near record peanut crop were completely harvested by the end of October. Alabama was the second leading state in the production of peanuts in 1985. Most of the sorghum crop, which also produced record yields, was harvested by the first week of November. Soybean and cotton harvesting was virtually complete by the first part of December. As it was a banner year for other row crops, so it was for soybeans and cotton. Both soybeans and cotton also produced state record yields. Most of the state's fall seeding of crops was complete by mid-December. Yields for row crops in 1985 were excellent, as growing and harvesting conditions were ideal.

### ALABAMA'S FIVE LEADING CROPS: ACREAGE, YIELD, PRODUCTION, AND VALUE, 1985

Crop	Unit	Harvested	Yield per Harvested Acre	Production	Value of Production
		Thousand Acres	Unit	Thousand Units	Thousand Dollars
Corn	Bu.	325	75	24,375	60,938
Cotton lint 1/	Lb.	329	795	545	140,741 2/
Hay	Ton	700	2.20	1,540	97,020
Peanuts for nuts	Lb.	200	2,950	590,000	136,200
Soybeans for beans	Bu.	1,030	27	27,810	141,831

1/Production in 480 pound net weight bales. 2/Cottonseed would add \$10,584,000 to the value of production from the cotton crop.

## LIVESTOCK REVIEW

1985

Robert L. Jefferson

**Cattle Numbers Down 3 Percent:** All cattle and calves in Alabama as of January 1, 1986, totaled 1,780,000 head. This is 3 percent below the January 1 inventory last year and 5 percent below the January 1, 1984, inventory. All inventory classes were down from a year ago except bulls 500 pounds and over. All cows that have calved, at 910,000 head, were down 1 percent. Beef cows decreased 9,000 head, while milk cows were down 1,000 head. Heifers for beef cow replacements were down 7,000 head, while milk cow replacements declined 1,000 head. Steers 500 pounds and over decreased 2 percent and calves under 500 pounds were down 6 percent. The 1985 calf crop was placed at 820,000 head, down 1 percent from 1984. Alabama ranked 22nd among states in all cattle, but 14th in the number of beef cows on farms.

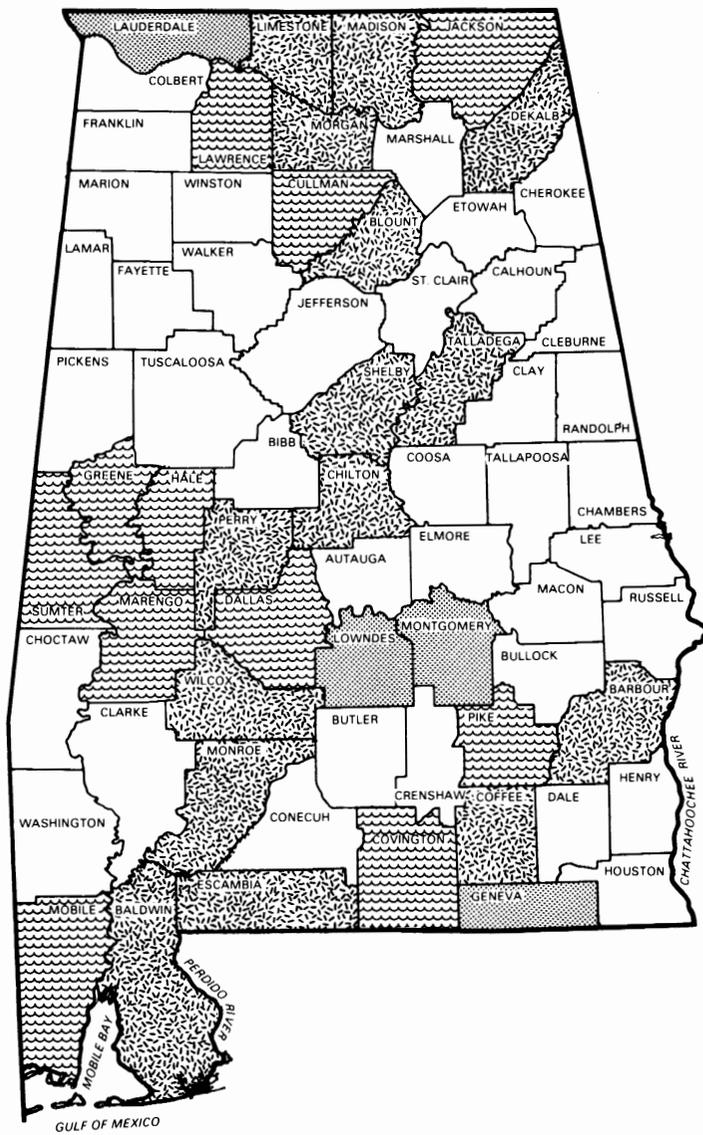

**Hogs:** Alabama's December 1, 1985, hog and pig inventory was at a record low 345,000 head, 15,000 less than the previous low established in 1984. Breeding stock dropped to 50,000 head, compared to 56,000 head in 1984, while market hogs dropped 3 percent to 295,000 head. The 1985 pig crop totaled 544,000 head, down 13 percent from 1984. Pork producers farrowed 74,000 sows during 1985, down 9 percent from the previous year. Alabama ranked 21st among states in total hog numbers.

**Milk Production Up:** Alabama's dairymen produced an estimated 547 million pounds of milk during 1985, up 2 percent from the 536 million pounds during 1984. The annual average number of cows milked was 49,000 head, 1,000 below the 1984 average. Production per cow averaged 11,163 pounds for 1985.

**Red Meat Production:** The 1985 production of red meat (beef, veal, pork, and mutton) in Alabama totaled 265.4 million pounds (dress weight). This was 9 percent more than the 1984 level. Cattle slaughter totaled 269,600 head, 14 percent above a year earlier. Calf slaughter totaled 1,700 head, 1,200 head less than the previous year. Hogs butchered, at 475,300 head, were down 10 percent.

## POULTRY REVIEW

1985

*Forestine Herron*

**Broiler Production Up 5 Percent:** Alabama broiler producers marketed 561.8 million birds in the 1985 marketing year, an increase of 25.2 million from the 536.6 million marketed in 1984. Alabama is the third largest broiler-producing state in the United States.

**Egg Production Increased:** During 1985, Alabama's laying flocks produced 2,794 million eggs, up 11 million from the previous year. Hens and pullets of laying age on hand as of December 1, 1985, were 11.3 million, compared with 11.9 million in 1984. Alabama ranked ninth nationally in the production of eggs.

**Hatchery Production Up 6 Percent:** Commercial hatcheries in Alabama hatched a record 707.7 million chicks in 1985, 37.2 million more than the previous high of 670.5 million chicks hatched in 1984. Egg-type chicks hatched was 11.3 million, compared with 11.4 million in 1984. Broiler-type chicks hatched totaled 696.4 million, 37.3 million more than in 1984. Broiler-type chicks hatched accounted for over 98 percent of the total hatch in the state. Alabama hatcheries shipped 88.3 million broiler-type chicks to other states in 1985, while 18.0 million were shipped into Alabama.

**Chicken Production (excluding broilers) Down 41 Percent:** Alabama poultrymen produced 9.0 million chicks (excluding broilers) in 1985, compared with 15.3 million in 1984. This phase of the poultry industry largely reflects the production of replacement pullets for laying flocks and production in small farm flocks.

1/Marketing year: December-November basis. 2/Hens and pullets of laying age and annual egg production consist of commercial table egg layers, broiler breeders, egg breeders, and farm flocks of 400 birds or less. 3/Included in other counties in District to avoid disclosure of individual operations.

## PRICES REVIEW

1985

*BARBARA N. SANFORD*

**Prices Received by Farmers:** The All Commodity Index of Prices Received by Alabama farmers averaged 511 percent of the 1910-14 = 100 base in 1985, compared with 573 percent in 1984. This was a decline of 11 percent from 1984 and 6 percent below 1983. This decrease is attributed to a drop in most crop and livestock commodity prices except for beef cattle, calves, and peaches.

The Livestock and Products Index, one of the components of the All Commodity Index, was 506 percent of the base in 1985, down 9 percent from the 1984 average. Beef cattle averaged \$46.20 per hundredweight (cwt.), up \$.50 from the 1984 price of \$45.70. The average price for calves was \$57.50 per cwt., up \$2.90 from a year ago. Broilers, at \$.28 per pound, were \$.04 lower than in 1984. Egg prices, at \$.501 per dozen, were \$.21 below the previous year's price. Milk sold wholesale by farmers averaged \$14.50 per cwt., \$.30 below the 1984 price. Hogs averaged \$43.60 per cwt., \$3.60 below 1984.

The other component of the All Commodity Index, the Crop Index was 520 percent of the base in 1985, 15 percent below the 1984 average. Soybeans averaged \$5.05 per bushel, down \$1.01 from the 1984 price of \$6.06. The corn price averaged \$2.40 per bushel, \$.45 below a year ago. Wheat averaged \$3.05 per bushel, down \$.20 from the 1984 price. Potatoes, at \$5.45 per cwt., compares with \$7.45 a year ago. Peanuts averaged \$.227 per pound in 1985, \$.058 below the previous year's price. The cotton price of \$.538 per pound was \$.015 below the 1984 price.

**Prices Paid by Farmers:** Alabama does not have an Index of Prices Paid by Farmers, therefore, direct comparison between prices paid and prices received cannot be made. The cost of production items increased over a year earlier.

Farmers in the state paid an average of \$207.00 per ton for chick starter in 1985 compared with \$225.00 and \$221.00 in 1984 and 1983, respectively. Broiler grower in 1985 sold for \$191.00 per ton, down from \$236.00 in 1984 and \$224.00 in 1983. Laying feed, at \$197.00 per ton, compares with \$213.00 in 1984 and \$206.00 in 1983. In 1985, the average price for 16 percent protein dairy feed was \$174.00 per ton compared with \$197.00 in 1984. Hog feed, 14-18 percent protein, averaged \$10.33 per cwt., down \$1.15 from 1984. Soybean meal, 44 percent protein, averaged \$11.13 per cwt. in 1985 compared with \$14.29 a year ago.

## CASH RECEIPTS REVIEW

1985

*Barbara N. Sanford*

**Cash Farm Income:** Total cash farm income from farm marketings for 1985 declined 4.4 percent from \$2,256,439,000 in 1984 to \$2,157,252,000. Livestock and livestock products, valued at \$1,307.8 million, accounted for 61 percent of the total, while crops totaled \$849.5 million to make up the remaining 39 percent.

Alabama poultry and poultry products accounted for 36.6 percent of the state's total receipts from farm marketings with cattle and calves ranking second with 16.1 percent of the total receipts. Cotton lint and cottonseed receipts accounted for 7.0 percent of the total, while soybean receipts totaled 6.5 percent. Peanuts receipts accounted for 5.9 percent of the total followed by greenhouse and nursery products with 5.3 percent, farm forest products with 4.3 percent, and dairy products with 3.6 percent. Sales from these eight enterprises made up 85.3 percent of the total cash receipts from farm marketings in Alabama.

Receipts from the state's broilers and eggs totaled \$789.1 million in 1985, down \$98.5 million from the 1984 total of \$887.6 million. Cattle and calf returns totaled \$346.3 million, up 9.1 percent from the 1984 total of \$317.5 million. Receipts from cotton, soybeans, and peanuts accounted for 49.2 percent of the crop receipts. Combined returns from these crops were down 8.3 percent from 1984.

**Cash Receipts Tables:** In the county tables, state totals may not add due to rounding, and some data will be included in "Other Counties" to avoid disclosure of individual operations.
